How to Configure Site-to-site IPsec VPN with Amazon VPC

This example shows how to use the VPN Setup Wizard to create a site-to-site VPN between a ZyWALL/USG and an Amazon VPC platform. The example instructs how to configure the VPN tunnel between each site. When the VPN tunnel is configured, each site can be accessed securely.

ZyWALL/USG Site-to-site IPsec VPN with Amazon VPC

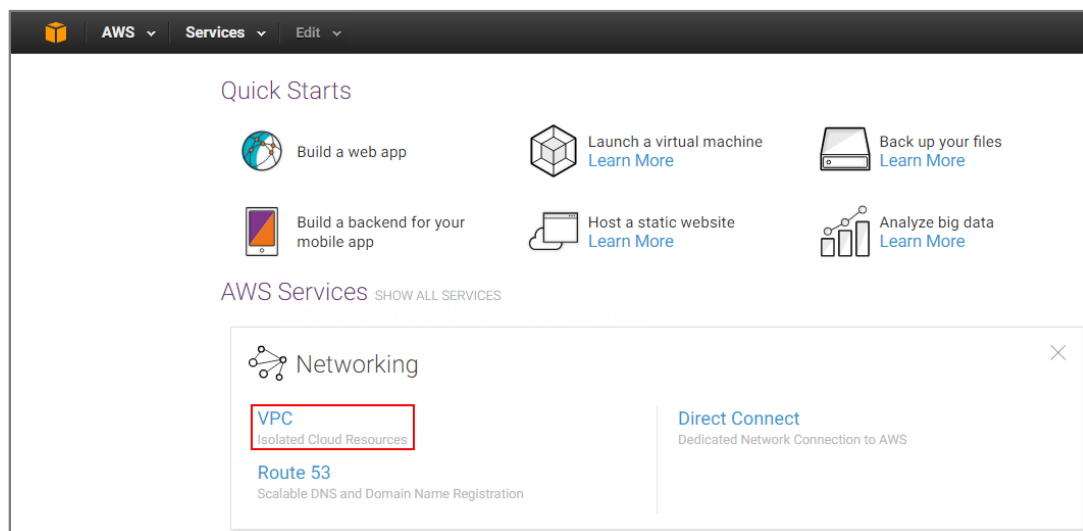

Note:

All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG110 (Firmware Version: ZLD 4.25) and Amazon VPC (June, 2016).

Set Up the IPSec VPN Tunnel on the Amazon VPC

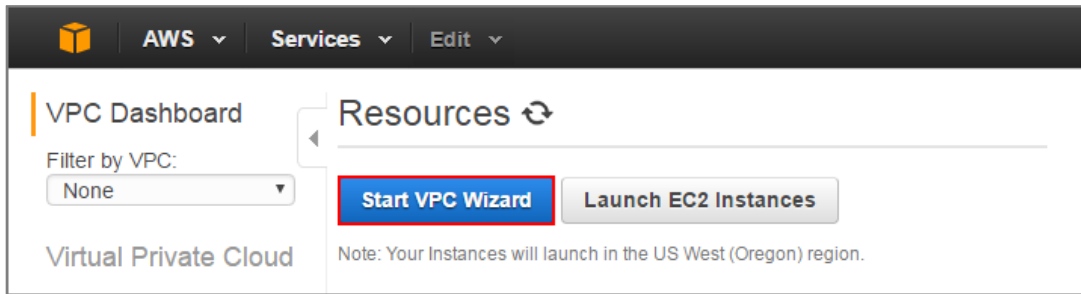

- 1 Sign into the Amazon AWS Management Console. Go to Networking > VPC.

Amazon AWS Management Console > Networking > VPC

- 2 In the upper left-hand of the screen, click **Start VPC Wizard**.

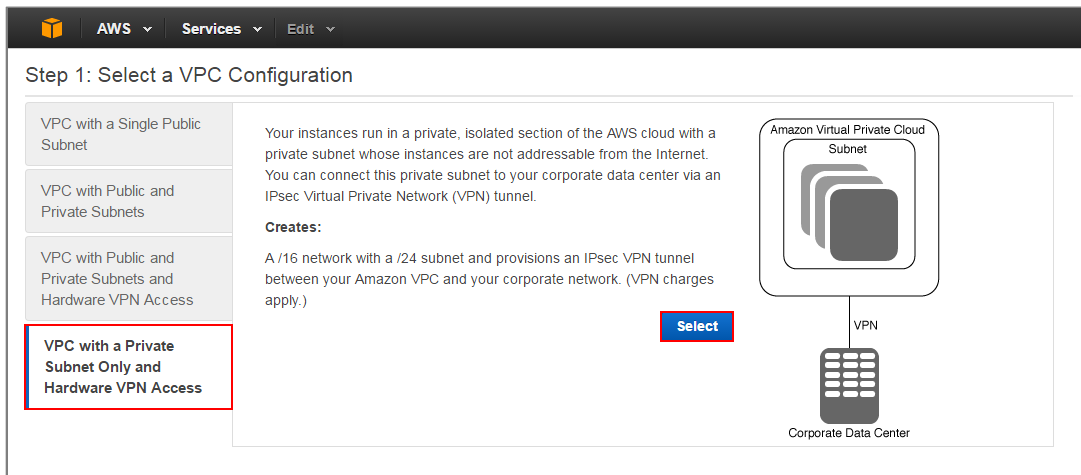

Amazon VPC Management Console > Networking > VPC > Start VPC Wizard

- 3 Select a VPC Configuration, select VPC with a Private Subnet Only and Hardware VPN Access, and then click Select.

Select a VPC Configuration > VPC with a Private Subnet Only and Hardware VPN

Access

- 4 VPC with a Private Subnet Only and Hardware VPN, add your **IP CIDR block** and **Private subnet**. Click **Next**.

VPC with a Private Subnet Only and Hardware VPN

Step 2: VPC with a Private Subnet Only and Hardware VPN Access

IP CIDR block:* (65531 IP addresses available)

VPC name:

Private subnet:* (251 IP addresses available)

Availability Zone:*

Private subnet name:

You can add more subnets after AWS creates the VPC.

Add endpoints for S3 to your subnets

Subnet:

Enable DNS hostnames:* Yes No

Hardware tenancy:*

[Cancel and Exit](#) [Back](#) [Next](#)

- Configure your VPN, add your ZyWALL/USG public IP address into **Customer Gateway IP**. Name your **Customer Gateway name** and **VPN Connection name**. Click **Create VPC** at the bottom of the blade.

Configure your VPN

Step 3: Configure your VPN

Specify the public IP Address of your VPN router (Customer Gateway)

Customer Gateway IP:*

Customer Gateway name:

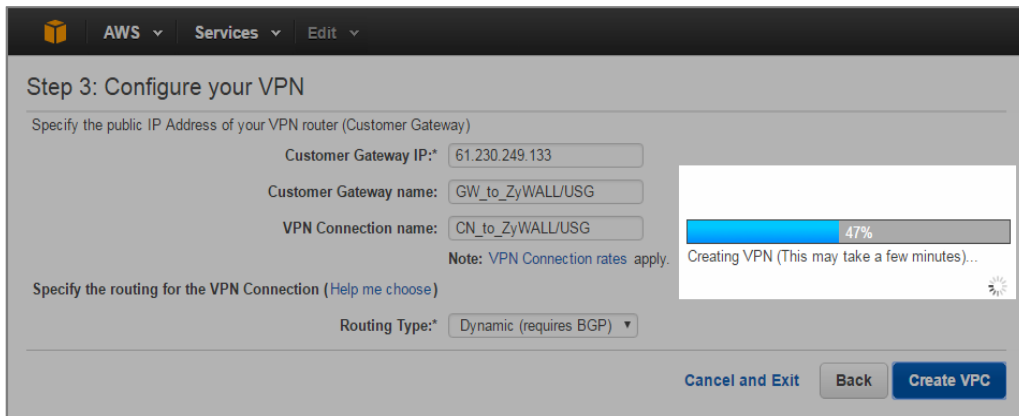

VPN Connection name:

Note: VPN Connection rates apply.

Specify the routing for the VPN Connection ([Help me choose](#))

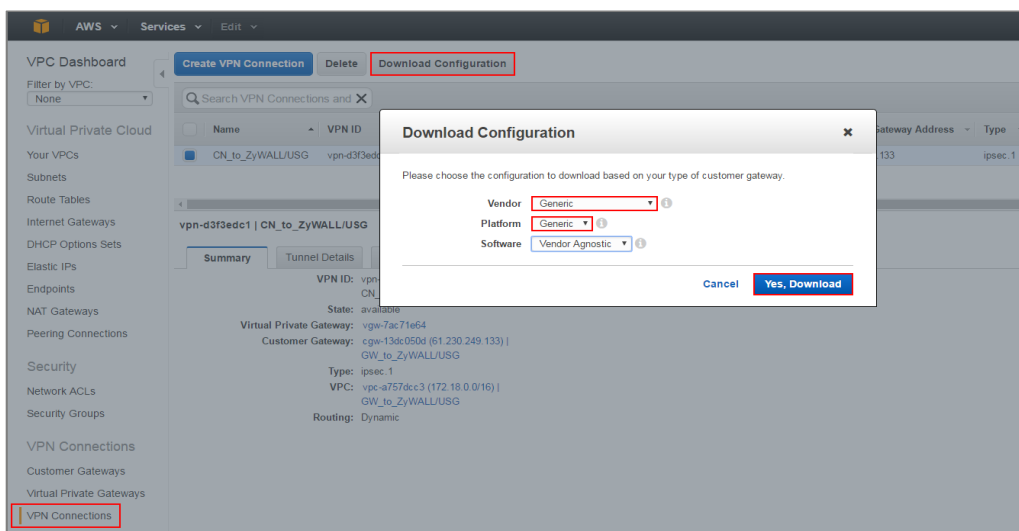

Routing Type:*

[Cancel and Exit](#) [Back](#) [Create VPC](#)

- 6 In the VPC Dashboard, go to VPN Connections. Select Download Configuration from the upper bar. Select Vendor and Platform to be Generic. Click Yes, Download.

VPC Dashboard > VPN Connections

- 7 Open the downloaded configuration txt. file, it displays IKE SA, IPSec SA and Gateway IP address. Please make sure all the settings match your ZyWALL/USG's setting.

Configuration txt. File

```
IPSec Tunnel #1
=====
#1: Internet Key Exchange Configuration
Configure the IKE SA as follows:
- Authentication Method      : Pre-Shared Key
- Pre-Shared Key            : 2EhrEA5WT6QFMEBaaPZT1bEmnoUaCLhW
- Authentication Algorithm   : sha1
- Encryption Algorithm      : aes-128-cbc
- Lifetime                  : 28800 seconds
- Phase 1 Negotiation Mode  : main
- Perfect Forward Secrecy   : Diffie-Hellman Group 2

#2: IPSec Configuration
Configure the IPSec SA as follows:
- Protocol                  : esp
- Authentication Algorithm   : hmac-sha1-96
- Encryption Algorithm      : aes-128-cbc
- Lifetime                  : 3600 seconds
- Mode                      : tunnel
- Perfect Forward Secrecy   : Diffie-Hellman Group 2

IPSec Dead Peer Detection (DPD) will be enabled on the AWS Endpoint. We
recommend configuring DPD on your endpoint as follows:
- DPD Interval              : 10
- DPD Retries               : 3

#3: Tunnel Interface Configuration
Outside IP Addresses:
- Customer Gateway          : 61.230.249.133
- Virtual Private Gateway   : 52.39.135.203
```

Set Up the IPSec VPN Tunnel on the ZyWALL/USG

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings** wizard to create a VPN rule that can be used with the Amazon VPC. Click **Next**.

Quick Setup > **VPN Setup Wizard > Welcome**

VPN Setup Wizard

Wizard Type > VPN Settings > Wizard Completed

Now the rule is configured on the ZyWALL/USG. The Phase 1 rule settings appear in the **VPN > IPSec VPN > VPN Gateway** screen and the Phase 2 rule settings appear in the **VPN > IPSec VPN > VPN Connection** screen. Click **Close** to exit the wizard.

Quick Setup > VPN Setup Wizard > Welcome > Wizard Type > VPN Settings > Wizard Completed

Test the IPsec VPN Tunnel

Go to ZyWALL/USG **CONFIGURATION > VPN > IPsec VPN > VPN Connection**, click **Connect** on the upper bar. The **Status** connect icon is lit when the interface is connected.

CONFIGURATION > VPN > IPsec VPN > VPN Connection

#	Status	Name	VPN Gateway	Gateway IP	Version	Policy
1		VPN_to_Azure	VPN_to_Azure	IPv4		VPN_to_VPC_LOCAL/VPN_to_VPC_REMOTE

Go to ZyWALL/USG **MONITOR > VPN Monitor > IPsec** and verify the tunnel **Up Time** and the **Inbound(Bytes)/Outbound(Bytes)** traffic.

MONITOR > VPN Monitor > IPsec

#	Name	Policy	My Address	Secure Gateway	Up Time	Timeout	Inbound(B...	Outbound...
1	WIZ_VPN_VPC	192.168.1.0/24<>172.18.0.0/24	61.230.249.133	P: 52.39.135.203:4500	28	76292	0(0 bytes)	0(0 bytes)

To test whether or not a tunnel is working, ping from a Local LAN to AWS VPC private Subnet for verification. Ensure that both computers have Internet access.

Ping from Local LAN to AWS VPC private Subnet for verification:

```
C:\Documents and Settings\ZyXEL>ping 172.18.0.15

Pinging 172.18.0.15 with 32 bytes of data:

Reply from 172.18.0.15 : bytes=32 time=27ms TTL=43
Reply from 172.18.0.15 : bytes=32 time=32ms TTL=43
Reply from 172.18.0.15 : bytes=32 time=26ms TTL=43
Reply from 172.18.0.15 : bytes=32 time=27ms TTL=43

Ping statistics for 172.18.0.15 :
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 26ms, Maximum = 32ms, Average = 28ms
```

What Could Go Wrong?

If you see below [info] or [error] log message, please check ZyWALL/USG Phase 1 Settings. Make sure your ZyWALL/USG Phase 1 Settings are supported in the Amazon VPC IKE Phase 1 setup list.

MONITOR > Log

How to Configure Site-to-site IPsec VPN with Microsoft (MS) Azure

This example shows how to use the VPN Setup Wizard to create a site-to-site VPN between a ZyWALL/USG and a Microsoft (MS) Azure platform. The example instructs how to configure the VPN tunnel between each site. When the VPN tunnel is configured, each site can be accessed securely.

ZyWALL Site-to-site IPsec VPN with Microsoft (MS) Azure

 Note:

1. All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG40 (Firmware Version: ZLD 4.25) and MS Azure (April, 2016).

Set Up the IPSec VPN Tunnel on the ZyWALL/USG

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings** wizard to create a VPN rule that can be used with the MS Azure. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome

VPN Setup Wizard

Wizard Type > VPN Settings > Wizard Completed

Phase 2

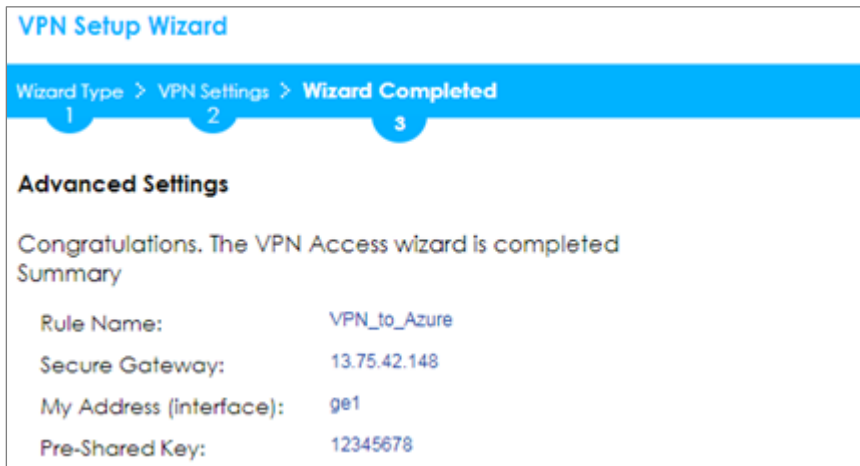

Active Protocol: esp

Encapsulation: tunnel

Encryption Algorithm: aes128

Now the rule is configured on the ZyWALL/USG. The Phase 1 rule settings appear in the **VPN > IPSec VPN > VPN Gateway** screen and the Phase 2 rule settings appear in the **VPN > IPSec VPN > VPN Connection** screen. Click **Close** to exit the wizard.

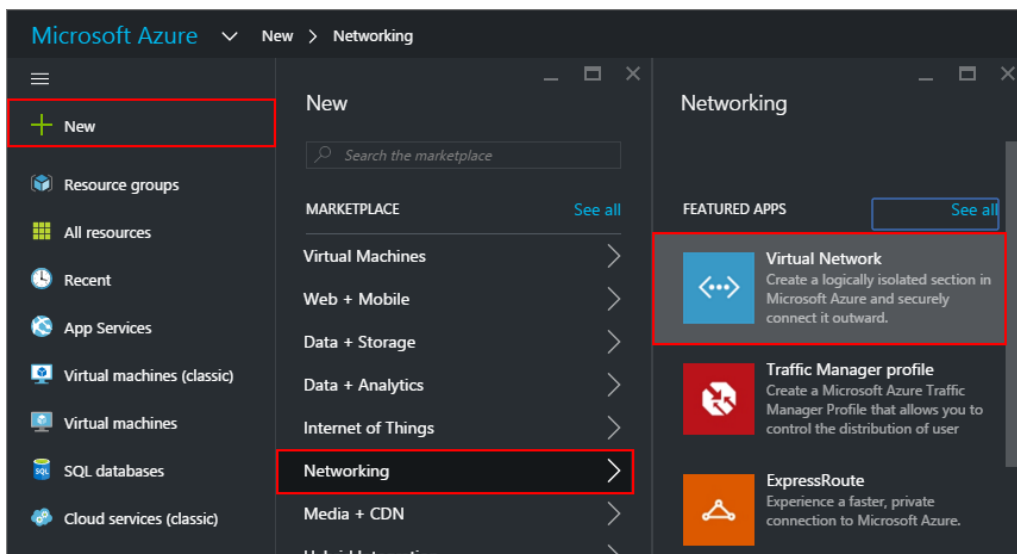

Quick Setup > VPN Setup Wizard > Welcome > Wizard Type > VPN Settings > Wizard Completed

Set Up the IPSec VPN Tunnel on the MS Azure

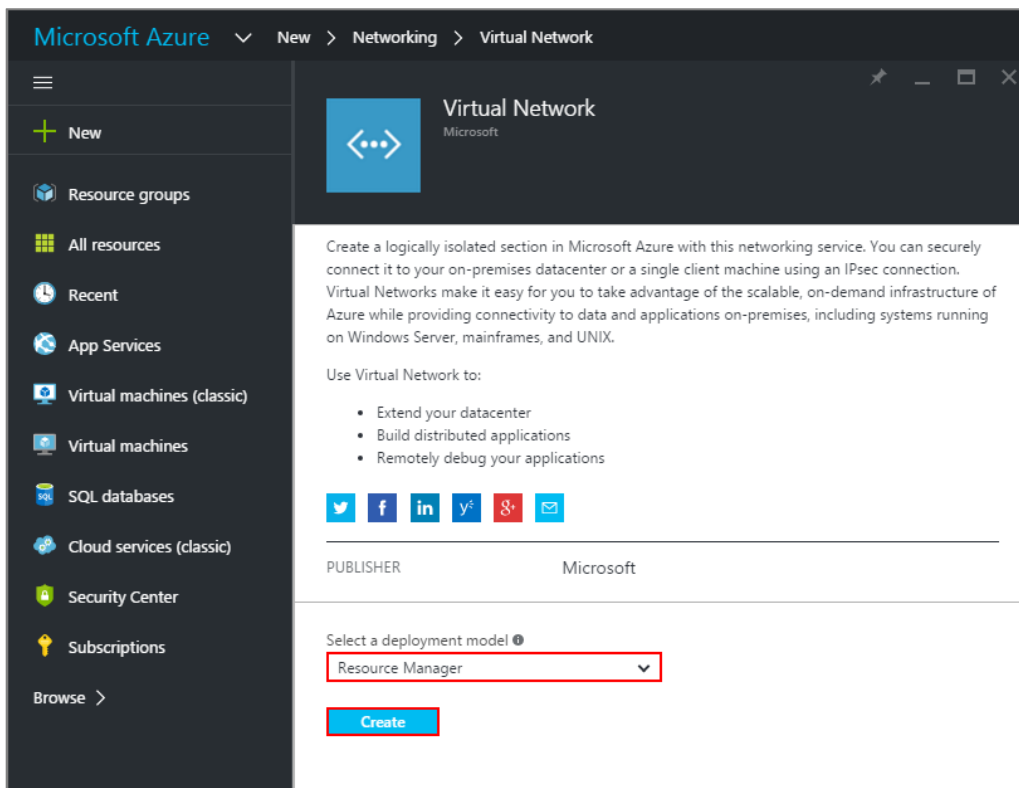

Sign into the **Windows Azure Management Portal**. In the upper left-hand corner of the screen, click **+New > Networking > Virtual Network**.

Azure portal > New > Networking > Virtual Network

Near the bottom of the **Virtual Network** blade, from the **Select a deployment model** list, select **Resource Manager**, and then click **Create**.

New > Networking > Virtual Network > Select a deployment model

On the **Create virtual network** page, enter the **NAME** for the VPN network. For example, **VPN_Vnet_to_USG**. Add your **Address Space**, **Subnet name** and a single **Subnet address range**.

Click **Resource group** and either select an existing resource group, or create a new one by typing a name for your new resource group. For example, **RG_USG**.

LOCATION is directly related to the physical location (region) where the virtual machines (VMs) reside. The region associated with the virtual network cannot be changed after it has been created.

Then, click the **Create** button. After clicking Create, you will see a tile on your dashboard that will reflect the progress of your VNet. The tile will change as the VNet is being created.

New > Networking > Virtual Network > Create virtual network

The screenshot shows the 'Create virtual network' blade in the Microsoft Azure portal. The breadcrumb navigation at the top reads 'New > Networking > Virtual Network > Create virtual network'. The left sidebar contains a navigation menu with options like 'New', 'Resource groups', 'All resources', 'Recent', 'App Services', 'Virtual machines (classic)', 'Virtual machines', 'SQL databases', 'Cloud services (classic)', 'Security Center', and 'Subscriptions'. The main content area is titled 'Create virtual network' and contains the following fields:

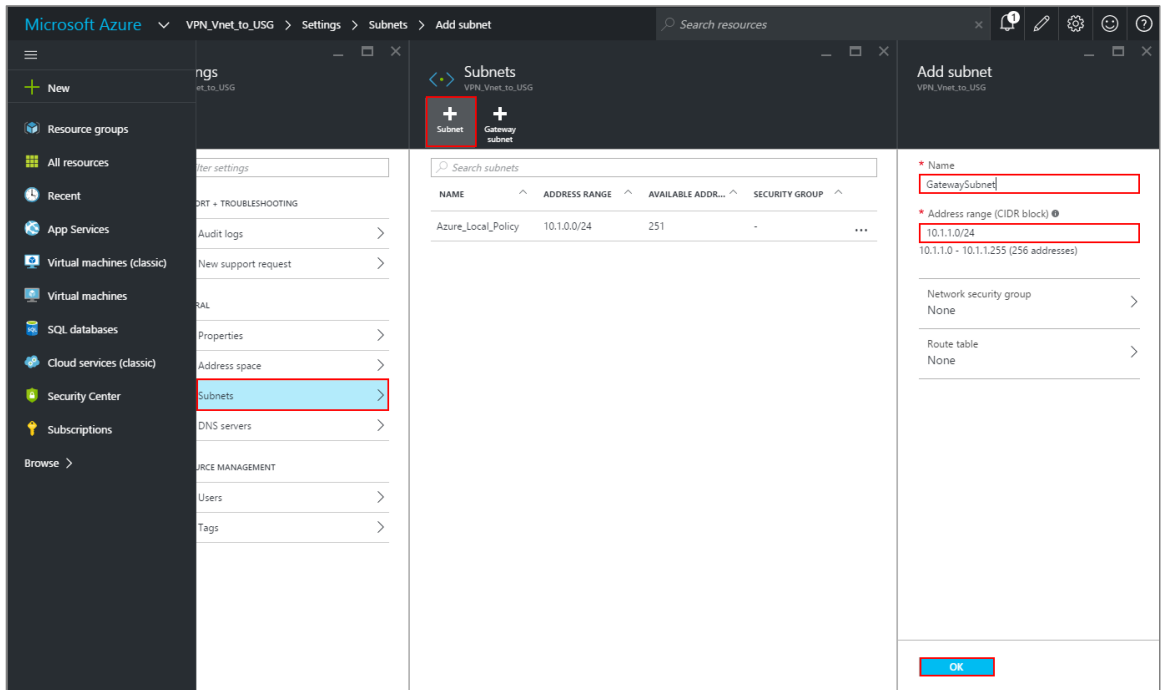

- Name:** VPN_Vnet_to_USG (with a green checkmark)
- Address space:** 10.1.0.0/16 (with a green checkmark). Below the input, it shows '10.1.0.0 - 10.1.255.255 (65536 addresses)'.
- Subnet name:** Azure_Local_Policy (with a green checkmark)
- Subnet address range:** 10.1.0.0/24 (with a green checkmark). Below the input, it shows '10.1.0.0 - 10.1.0.255 (256 addresses)'.
- Subscription:** Free Trial (dropdown menu)
- Resource group:** + New (dropdown menu). Below it, a 'New resource group name' field contains 'RG_USG' (with a green checkmark).
- Location:** East Asia (dropdown menu)

At the bottom, there is a checkbox for 'Pin to dashboard' which is checked, and a blue 'Create' button.

In the portal, navigate to the virtual network to which you just created. On the blade for your virtual network, click the **Settings** icon at the top of the blade to expand the Setting blade to **Subnets > Add > Add Subnet**. **Name** your subnet

GatewaySubnet. You should not name it anything else, or the gateway will not work. Add the IP **Address range** for your gateway. Click **OK** at the bottom of the blade to create the subnet.

VPN Vnet_to_USG > Settings > Subnet > Add subnet

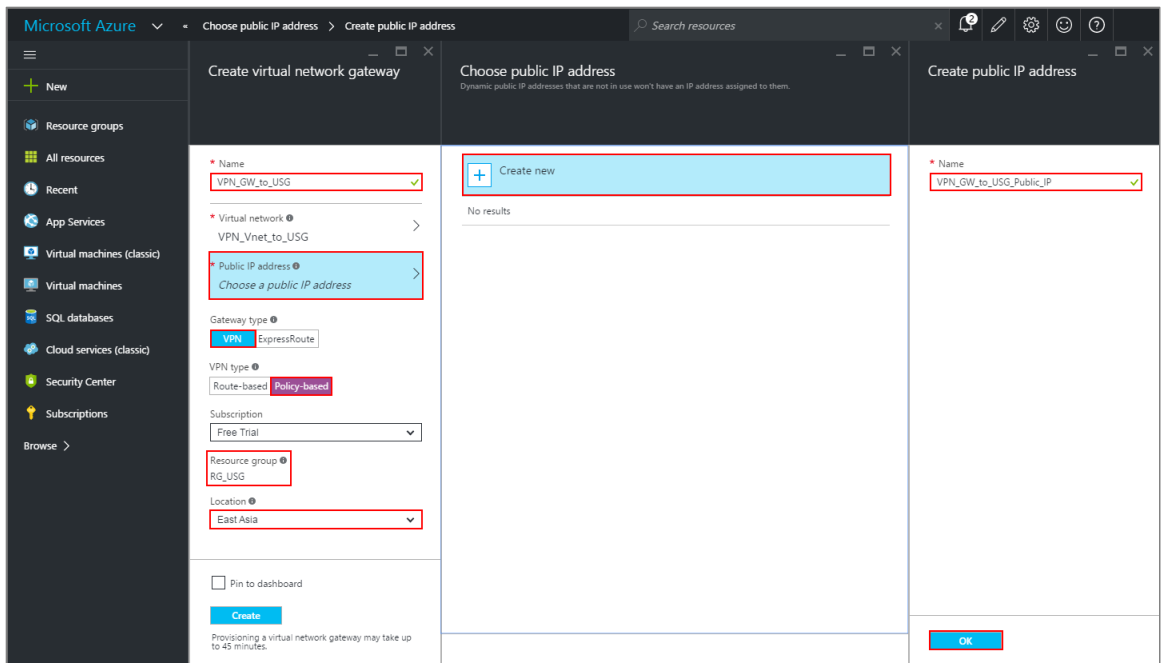

In the portal, go to **New**, then Networking. Select **Virtual network gateway** from the list. On the **Create virtual network gateway** blade **Name** field, name your gateway. Next, choose the **Virtual network** that you want to deploy this gateway to.

Click the arrow (>) to open the **Choose public IP address** blade. Then click **Create New** to open the **Create public IP address** blade. Input a **Name** for your public IP address. Note that this is not asking for an IP address. The IP address will be assigned dynamically. Rather, this is the name of the IP address object that the address will be assigned to. Click **OK** to save your changes.

For **Gateway type**, select **VPN**. For **VPN type**, select **Policy-based**. For **Resource Group**, the resource group is determined by the Virtual Network that you select. For **Location**, make sure it's showing the location that both your Resource Group and VNet exist in.

New > Networking > Create virtual network gateway > Choose public IP address > Create public IP address

In the Azure Portal, navigate to **New > Networking > Local network gateway**. The local network gateway refers to your ZyWALL/USG public IP and local subnet settings.

On the **Create local network gateway** blade, specify a **Name** for your ZyWALL/USG gateway object.

Specify public IP address of your ZyWALL/USG. It cannot be behind NAT and has to be reachable by Azure. **Address space** refers to the address ranges on your ZyWALL/USG local network. For **Resource Group**, select the resource group that you created before. For **Location**, if you are creating a new local network

gateway, you can use the same location as the virtual network gateway. But, this is not required. The local network gateway can be in a different location.

Click **Create** to create the local network gateway.

New > Networking > Local network gateway

The screenshot shows the 'Create local network gateway' form in the Microsoft Azure portal. The form is titled 'Create local network gateway' and is located in the 'Networking' section. The form fields are as follows:

- Name:** VPN_Connection_to_USG (with a green checkmark)
- IP address:** 59.124.163.151 (with a green checkmark)
- Address space:** 192.77.1.0/24 (with a blue highlight and a green checkmark)
- Subscription:** Free Trial (with a dropdown arrow)
- Resource group:** RG_USG (with a dropdown arrow)
- Location:** East Asia (with a dropdown arrow)

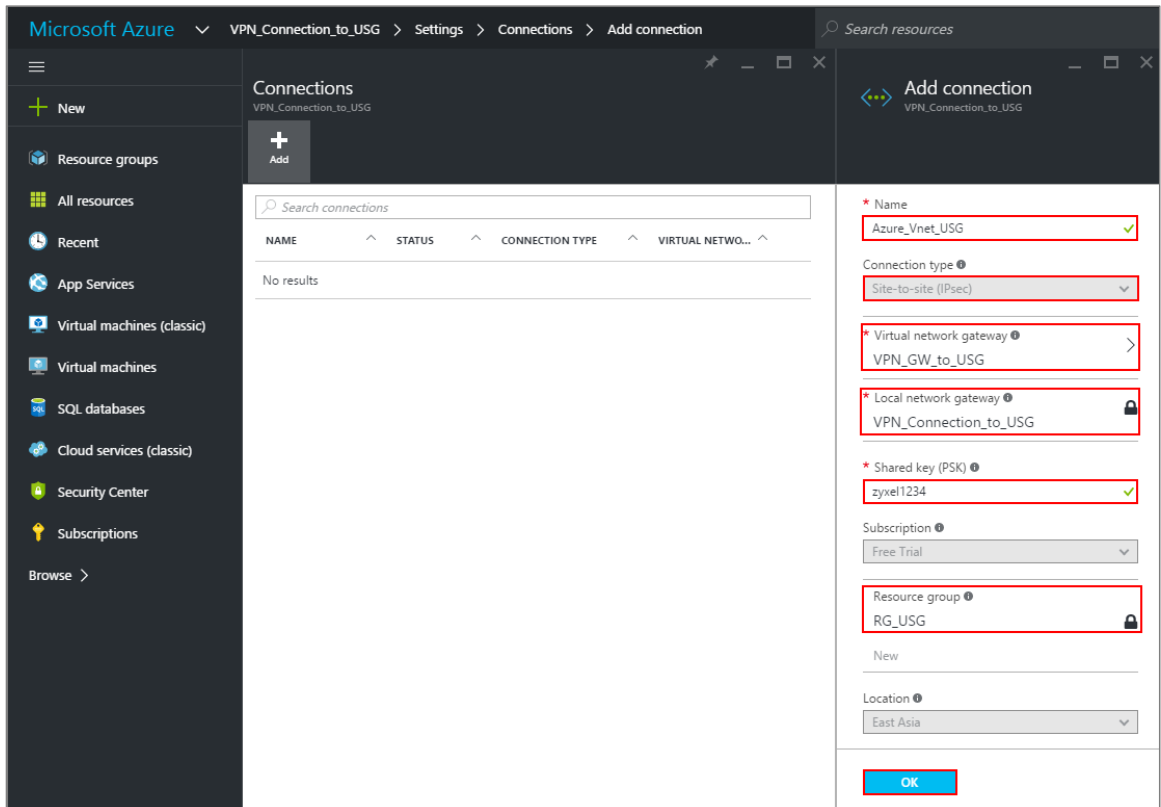

At the bottom of the form, there is a checkbox labeled 'Pin to dashboard' which is checked, and a blue 'Create' button.

Locate your virtual network gateway (VPN_Connection_to_USG in this example) and click **Settings > Connection > Add connection**, **Name** your connection. For **Connection type**, select **Site-to-site (IPsec)**. For **Virtual network gateway**, the value is fixed because you are connecting from this gateway (VPN_GW_to_USG in this example).

For **Local network gateway**, select the local network gateway that you want to use (VPN_Connection_to_USG in this example).

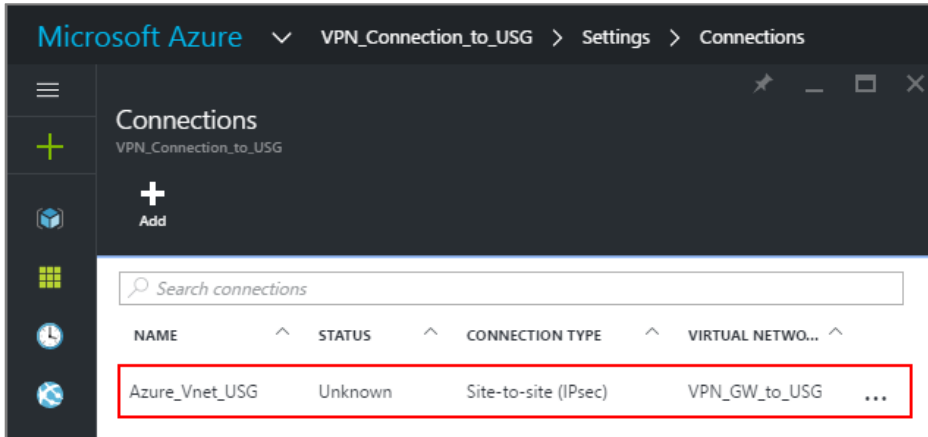

For **Shared Key (PSK)**, the value here must match the value that you are using for your ZyWALL/USG device. For **Resource Group**, select the resource group that you **created before**. Click **OK** to create your connection.

VPN_Connection_to_USG > Settings > Connections > Add connection

When the connection is complete, you'll see it appear in the **Connections** blade for your Gateway.

VPN_Connection_to_USG > Settings > Connections

Test the IPsec VPN Tunnel

Go to ZyWALL/USG **CONFIGURATION > VPN > IPsec VPN > VPN Connection**, click **Connect** on the upper bar. The **Status** connect icon is lit when the interface is connected.

CONFIGURATION > VPN > IPsec VPN > VPN Connection

#	Status	Name	VPN Gateway	Gateway IP Version	Policy
1		VPN_to_Azure	VPN_to_Azure	IPv4	VPN_to_Azure_LOCAL/VPN_to_Azure_REMOTE

Page 1 of 1 | Show 50 Items | Displaying 1 - 1 of 1

Go to ZyWALL/USG **MONITOR > VPN Monitor > IPSec** and verify the tunnel **Up Time** and the **Inbound(Bytes)/Outbound(Bytes)** traffic.

MONITOR > VPN Monitor > IPSec

#	Name	Policy	My Address	Secure Gateway	Up Time	Timeout	Inbound(B...	Outbound...
1	WIZ_VPN_Azure	192.77.1.0/24<>10.1.0.0/16	59.124.163.151	P: 13.75.42.148:4500	14	86406	0(0 bytes)	0(0 bytes)

Page 1 of 1 Show 50 items Displaying 1 - 1 of 1

Go to **Azure_Vnet_USG > Settings** to check the tunnel **DATA IN** and **DATA OUT**.

VPN > VPN Settings > Currently Active VPN Tunnels

The screenshot shows the Microsoft Azure portal interface for the 'Azure_Vnet_USG' connection. The 'Essentials' section displays the following details:

- Resource group: [RG_USG](#)
- Status: **Connected**
- Location: **East Asia**
- Subscription name: **Free Trial**
- Subscription ID: **23a31ce5-c9fa-4da3-958b-8bb1b6fe8790**
- Data in: **0 B**
- Data out: **576 B**
- Virtual network: [VPN_Vnet_to_USG](#)
- Virtual network gateway: [VPN_GW_to_USG \(13.75.42.148\)](#)
- Local network gateway: [VPN_Connection_to_USG \(59.124.163.151\)](#)

An 'All settings' button is visible at the bottom right of the Essentials section.

To test whether or not a tunnel is working, ping from a computer at one site to a computer at the other. Ensure that both computers have Internet access.

PC behind ZyWALL/USG > Window 7 > cmd > ping 10.1.0.33

```

How to Configure GRE over IPsec VPN Tunnel

This example shows how to use the VPN Setup Wizard to create a GRE over IPsec VPN tunnel between ZyWALL/USG devices. The example instructs how to configure the VPN tunnel between each site. When the GRE over IPsec VPN tunnel is configured, each site can be accessed securely.

ZyWALL/USG GRE over IPsec VPN

 Note:

All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG110 (Firmware Version: ZLD 4.25) and ZyWALL 310 (Firmware Version: ZLD 4.25).

Set Up the ZyWALL/USG GRE over IPsec VPN Tunnel of Corporate Network (HQ)

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings** wizard to create a VPN rule that can be used with the FortiGate. Click **Next**.

Congratulations. The VPN Access wizard is completed

Summary

Rule Name:	WIZ_VPN_HQ
Secure Gateway:	111.250.184.80
Pre-Shared Key:	12345678
Local Policy (IP/Mask):	192.168.1.0 / 255.255.255.0
Remote Policy (IP/Mask):	192.168.2.0 / 255.255.255.0

Go to **CONFIGURATION > VPN > IPsec VPN > VPN Gateway > Show Advanced Settings**. Configure **Authentication > Peer ID Type** as **Any** to let the ZyWALL/USG does not require to check the identity content of the remote IPsec router.

CONFIGURATION > VPN > IPsec VPN > VPN Gateway > Show Advanced Settings > Authentication > Peer ID Type

The screenshot shows the 'Authentication' configuration page. Under the 'Advance' section, the 'Peer ID Type' dropdown menu is highlighted with a red box and set to 'Any'. Other settings include 'Local ID Type' set to 'IPv4' and 'Content' set to '0.0.0.0'.

Go to **CONFIGURATION > VPN > IPsec VPN > VPN Connection > Show Advanced Settings > Policy**. Select **Enable GRE over IPsec**.

CONFIGURATION > VPN > IPsec VPN > VPN Connection > Show Advanced Settings > Policy

The screenshot shows the 'Policy' configuration page. Under the 'Advance' section, the 'Enable GRE over IPsec' checkbox is checked. The 'Local policy' is set to 'WIZ_VPN_HQ_LOC' and the 'Remote policy' is set to 'WIZ_VPN_HQ_REM'. Both policies are associated with the subnet 'SUBNET, 192.168.1.0/24'.

The GRE tunnel runs between the IPsec public interface on the HQ unit and the Branch unit. Go to **CONFIGURATION > Network > Interface > Tunnel > Add**. Enter the **Interface Name** (The format is *tunnelx*, where x is 0 - 3.). Enter the **IP Address** and **Subnet Mask** for this interface. Specify **My Address** to be the interface or IP address to use as the source address for the packets this interface tunnels to the remote gateway. Enter **Remote Gateway Address** to be the IP address or domain name of the remote gateway to this tunnel traffic.

CONFIGURATION > Network > Interface > Tunnel > Add

How to Configure Site-to-site IPSec VPN Where the Peer has a Static IP Address

This example shows how to use the VPN Setup Wizard to create a site-to-site VPN with the Peer has a Static IP Address. The example instructs how to configure the VPN tunnel between each site. When the VPN tunnel is configured, each site can be accessed securely.

ZyWALL Site-to-site IPSec VPN with a Static IP Address Peer

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the ZyWALL/USG IPSec VPN Tunnel of Corporate Network (HQ) In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings** wizard to create a VPN rule that can be used with the remote ZyWALL/USG. Click **Next**.

Remote Policy (IP/Mask): 192.168.10.0 / 255.255.255.0

Now the rule is configured on the ZyWALL/USG. The Phase 1 rule settings appear in the **VPN > IPSec VPN > VPN Gateway** screen and the Phase 2 rule settings appear in the **VPN > IPSec VPN > VPN Connection** screen. Click **Close** to exit the wizard.

Quick Setup > VPN Setup Wizard > Wizard Type > VPN Settings > Wizard completed

The screenshot shows the 'VPN Setup Wizard' completion screen. At the top, there is a breadcrumb trail: 'Wizard Type > VPN Settings > Wizard Completed'. Below this, the 'Express Settings' section displays a congratulatory message: 'Congratulations. The VPN Access wizard is completed'. A 'Summary' table lists the following configuration details:

Rule Name:	WIZ_VPN_HQ
Secure Gateway:	Any
Pre-Shared Key:	12345678
Local Policy (IP/Mask):	192.168.1.0 / 255.255.255.0
Remote Policy (IP/Mask):	192.168.10.0 / 255.255.255.0

Go to **CONFIGURATION > VPN > IPSec VPN > VPN Gateway** and click **Show Advanced Settings**. Configure **Authentication > Peer ID Type** as **Any** to let the ZyWALL/USG does not require to check the identity content of the remote IPSec router.

CONFIGURATION > VPN > IPSec VPN > VPN Gateway > Show Advanced Settings > Authentication > Peer ID Type

The screenshot shows the 'Authentication' configuration page. The 'Pre-Shared Key' option is selected. Below it, there are radio buttons for 'Certificate' and 'User Based PSK'. The 'Advance' section is expanded, showing the following settings:

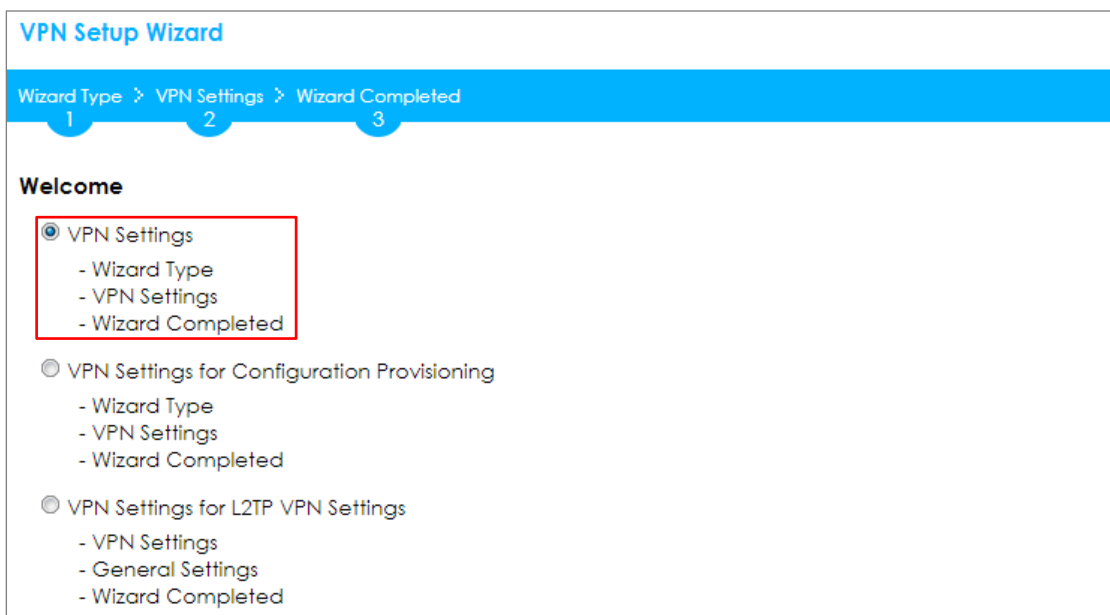

- Local ID Type: IPv4
- Content: 0.0.0.0
- Peer ID Type: Any (highlighted with a red box)
- Content: (empty field)

Set Up the ZyWALL/USG IPSec VPN Tunnel of Corporate Network

(Branch has a Dynamic IP Address)

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings** to create a **Site-to-site VPN** Rule Name.

Quick Setup > VPN Setup Wizard > Welcome
Quick Setup > VPN Setup Wizard > Welcome

Choose **Express** to create a VPN rule with the default phase 1 and phase 2 settings and to use a pre-shared key. Click **Next**.

Quick Setup > VPN Setup Wizard > Wizard Type

VPN Setup Wizard

Wizard Type > VPN Settings > Wizard Completed

1 2 3

Please select the type of VPN policy you wish to setup.

Type of VPN policy

Express

Advanced

Type the **Rule Name** used to identify this VPN connection (and VPN gateway). You may use 1-31 alphanumeric characters. This value is case-sensitive. Click **Next**.

Quick Setup > VPN Setup Wizard > Wizard Type > VPN Settings (Scenario)

Rule Name: WIZ_VPN_Branch_Dynamic

Secure Gateway: 172.101.30.68

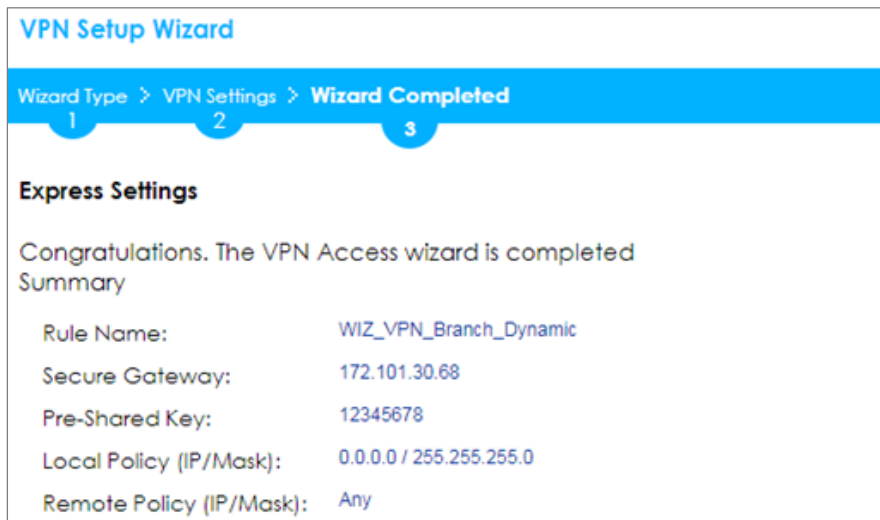

Pre-Shared Key: 12345678

Local Policy (IP/Mask): 192.168.10.0 / 255.255.255.0

Remote Policy (IP/Mask): 192.168.1.0 / 255.255.255.0

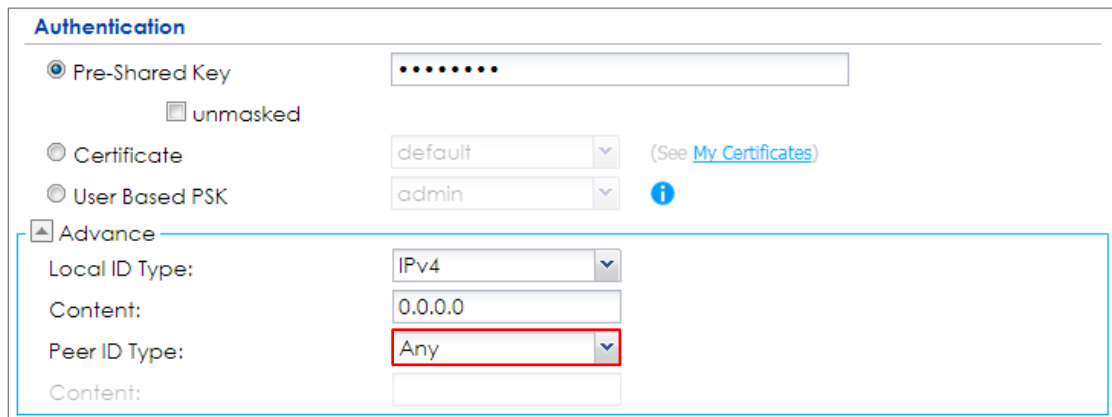

Now the rule is configured on the ZyWALL/USG. The Phase 1 rule settings appear in the **VPN > IPSec VPN > VPN Gateway** screen and the Phase 2 rule settings appear in the **VPN > IPSec VPN > VPN Connection** screen. Click **Close** to exit the wizard.

Quick Setup > VPN Setup Wizard > Welcome > Wizard Type > VPN Settings > Wizard Completed

Go to **CONFIGURATION > VPN > IPSec VPN > VPN Gateway** and click **Show Advanced Settings**. Configure **Authentication > Peer ID Type** as **Any** to let the ZyWALL/USG does not require to check the identity content of the remote IPSec router.

CONFIGURATION > VPN > IPSec VPN > VPN Gateway > Show Advanced Settings > Authentication > Peer ID Type

Test the IPsec VPN Tunnel

The Site-to-site VPN with Dynamic Peer can only initiate the VPN tunnel from the peer has a dynamic IP Address. Go to **CONFIGURATION > VPN > IPsec VPN > VPN Connection**, click **Connect** on the upper bar. The **Status** connect icon is lit when the interface is connected.

CONFIGURATION > VPN > IPsec VPN > VPN Connection

#	Status	Name	VPN Gateway	Gateway IP	Version	Policy
1		WIZ_VPN_Bra...	WIZ_VPN_Branc...	IPv4		WIZ_VPN_Branch_Dynamic_LOCAL/WIZ_VPN_Branch_Dyna...

Go to **MONITOR > VPN Monitor > IPsec** and verify the tunnel **Up Time** and **Inbound(Bytes)/Outbound(Bytes)** Traffic.

MONITOR > VPN Monitor > IPsec

#	Name	Policy	My Address	Secure Gateway	Up Time	Timeout	Inbound(By...	Outbound(...
1	WIZ_VPN_Branch_Dynamic	192.168.1.0/24<>...	172.101.30.68	D: 172.100.30.54	18	86402	0(0 bytes)	0(0 bytes)

To test whether or not a tunnel is working, ping from a computer at one site to a computer at the other. Ensure that both computers have Internet access (via the IPsec devices).

PC at HQ Office > Window 7 > cmd > ping 192.168.10.33

```
C:\Documents and Settings\ZYXEL>ping 192.168.1.33

Pinging 192.168.1.33 with 32 bytes of data:

info	IKE	[COOKIE] Invalid cookie, no sa found	IKE_LOG
Priority	Category	Message	Note
info	IKE	Recv:[HASH][NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG

If you see that Phase 1 IKE SA process done but still get below [info] log message, please check ZyWALL/USG Phase 2 Settings. Both ZyWALL/USG at the HQ and Branch sites must use the same Protocol, Encapsulation, Encryption, Authentication method and PFS to establish the IKE SA.

MONITOR > Log

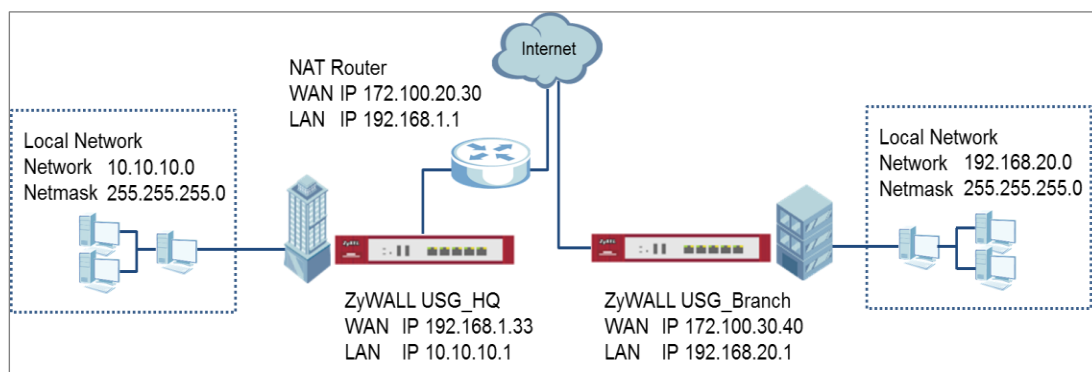

19	2017-09-11 ...	info	IKE	[SA] : No proposal chosen	IKE_LOG
20	2017-09-11 ...	info	IKE	[ID] : Tunnel [Server] Phase 2 Local policy mismatch	IKE_LOG
31	2017-09-11 ...	info	IKE	Send:[HASH][SA][NONCE][ID][ID]	IKE_LOG
32	2017-09-11 ...	info	IKE	Phase 1 IKE SA process done	IKE_LOG

Make sure the both ZyWALL/USG at the HQ and Branch sites security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.

Default NAT traversal is enable on ZyWALL/USG, please make sure the remote IPSec device must also have NAT traversal enabled.

How to Configure IPSec Site to Site VPN while one Site is behind a NAT router

This example shows how to use the VPN Setup Wizard to create a IPSec Site to Site VPN tunnel between ZyWALL/USG devices. The example instructs how to configure the VPN tunnel between each site while one Site is behind a NAT router. When the IPSec Site to Site VPN tunnel is configured, each site can be accessed securely.

ZyWALL/USG Site to Site VPN while one Site is behind a NAT router

Note:

All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG110 (Firmware Version: ZLD 4.25) and ZyWALL 310 (Firmware Version: ZLD 4.25).

Set Up the ZyWALL/USG IPsec VPN Tunnel of Corporate Network (HQ)

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings** wizard to create a VPN rule that can be used with the FortiGate. Click **Next**.

Make sure the both ZyWALL/USG at the HQ and Branch sites security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.

Default NAT traversal is enable on ZyWALL/USG, please make sure the remote IPSec device must also have NAT traversal enabled.

How to Configure Hub-and-Spoke IPSec VPN

This is an example of a hub-and-spoke VPN with the HQ ZyWALL/USG as the hub and spoke VPNs to Branches A and B. When the VPN tunnel is configured, traffic passes between branches via the hub (HQ). Traffic can also pass between spoke-and-spoke through the hub. Here are two methods to set up hub-and-spoke VPN connections: 1. With VPN Concentrator 2. Without VPN Concentrator. With just two branch offices, you could just manually set up VPN tunnels between HQ and the branches. With many branches it's best to use the VPN Concentrator to set up branch-HQ tunnels automatically.

ZyWALL/USG Hub-and-Spoke VPN Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the IPSec VPN Tunnel on the ZyWALL/USG by Using VPN Concentrator Hub_HQ-to-Branch_A

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings** wizard to create a VPN rule that can be used with the remote ZyWALL/USG. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome

VPN Setup Wizard

What Could Go Wrong?

If you see [info] or [error] log message such as below, please check ZyWALL/USG Phase 1 Settings. All ZyWALL/USG units must use the same Pre-Shared Key, Encryption, Authentication method, DH key group and ID Type to establish the IKE SA.

Priority	Category	Message	Note
info	IKE	Recv:[NOTIFY:INVALID_COOKIE]	IKE_LOG
info	IKE	Send:[ID][HASH][NOTIFY:INITIAL_CONTACT]	IKE_LOG
Priority	Category	Message	Note
error	IPSec	SPI: 0x0 (0) SEQ: 0x0 (0) No rule found, Dropping TCP packet	IPSec
error	IPSec	SPI: 0x0 (0) SEQ: 0x0 (0) No rule found, Dropping TCP packet	IPSec
info	IKE	[COOKIE] Invalid cookie, no sa found	IKE_LOG
Priority	Category	Message	Note
info	IKE	Recv:[HASH][NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG

If you see that Phase 1 IKE SA process done but still get [info] log message as below, please check ZyWALL/USG and SonicWALL Phase 2 Settings. All ZyWALL/USG units must use the same Protocol, Encapsulation, Encryption, Authentication method and PFS to establish the IKE SA.

19	2017-09-11 ...	info	IKE	[SA] : No proposal chosen	IKE_LOG
20	2017-09-11 ...	info	IKE	[ID] : Tunnel [Server] Phase 2 Local policy mismatch	IKE_LOG
31	2017-09-11 ...	info	IKE	Send:[HASH][SA][NONCE][ID][ID]	IKE_LOG
32	2017-09-11 ...	info	IKE	Phase 1 IKE SA process done	IKE_LOG

Make sure the all ZyWALL/USG units' security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.

By default, NAT traversal is enabled on ZyWALL/USG, so please make sure the remote IPSec device also has NAT traversal enabled.

Set Up the IPSec VPN Tunnel of ZyWALL/USG without Using VPN Concentrator Hub_HQ-to-Branch_A

Go to **CONFIGURATION > VPN > IPSec VPN > VPN Gateway** and select **Enable**. Type the **VPN Gateway Name** used to identify this VPN gateway.

Then, configure the **Secure Gateway** IP as the **Branch A's** Gateway IP address (in the example, 172.16.20.1). Type a secure **Pre-Shared Key** (8-32 characters) which must match your **Branch A's** Pre-Shared Key and click **OK**.

What Could Go Wrong?

If you see [info] or [error] log message such as below, please check ZyWALL/USG Phase 1 Settings. All ZyWALL/USG units must use the same Pre-Shared Key, Encryption, Authentication method, DH key group and ID Type to establish the IKE SA.

Priority	Category	Message	Note
info	IKE	Recv:[NOTIFY:INVALID_COOKIE]	IKE_LOG
info	IKE	Send:[ID][HASH][NOTIFY:INITIAL_CONTACT]	IKE_LOG
Priority	Category	Message	Note
error	IPSec	SPI: 0x0 (0) SEQ: 0x0 (0) No rule found, Dropping TCP packet	IPSec
error	IPSec	SPI: 0x0 (0) SEQ: 0x0 (0) No rule found, Dropping TCP packet	IPSec
info	IKE	[COOKIE] Invalid cookie, no sa found	IKE_LOG
Priority	Category	Message	Note
info	IKE	Recv:[HASH][NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG

If you see that Phase 1 IKE SA process done but still get [info] log message as below, please check ZyWALL/USG and SonicWALL Phase 2 Settings. All ZyWALL/USG units must use the same Protocol, Encapsulation, Encryption, Authentication method and PFS to establish the IKE SA.

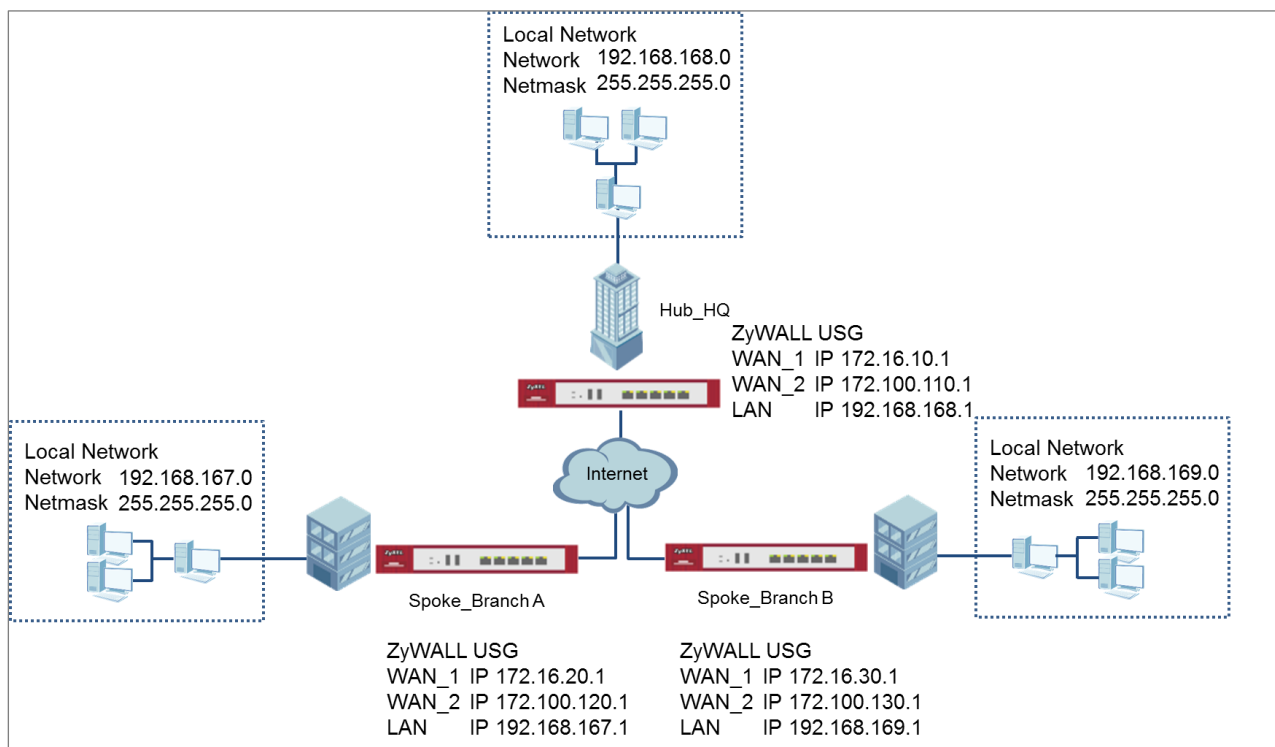

19	2017-09-11 ...	info	IKE	[SA] : No proposal chosen	IKE_LOG
20	2017-09-11 ...	info	IKE	[ID] : Tunnel [Server] Phase 2 Local policy mismatch	IKE_LOG
31	2017-09-11 ...	info	IKE	Send:[HASH][SA][NONCE][ID][ID]	IKE_LOG
32	2017-09-11 ...	info	IKE	Phase 1 IKE SA process done	IKE_LOG

Make sure the all ZyWALL/USG units' security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.

By default, NAT traversal is enabled on ZyWALL/USG, so please make sure the remote IPSec device also has NAT traversal enabled.

How to Use Dual-WAN to Perform Fail-Over on VPN Using the VPN Concentrator

This is an example of using Dual-WAN to perform fail-over on a hub-and-spoke VPN with the HQ ZyWALL/USG as the hub and spoke VPNs to Branches A and B. When the VPN tunnel is configured, traffic passes between branches via the hub (HQ). Traffic can also pass between spoke-and-spoke through the hub. If the primary WAN interface is unavailable, the backup WAN interface will be used. When the primary WAN interface is available again, traffic will use that interface again.

Hub & Spoken VPN Using the VPN Concentrator with Backup

Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the IPsec VPN Tunnel on the ZyWALL/USG Hub_HQ-to-Branch_A

Go to **CONFIGURATION > VPN > IPsec VPN > VPN Gateway**, select **Enable**. Type the **VPN Gateway Name** used to identify this VPN gateway.

Then, configure the **Primary** Gateway IP as the **Branch A's wan1** IP address (in the example, 172.16.20.1) and **Secondary** Gateway IP as the **Branch A's wan2** IP address (in the example, 172.100.120.1). Select **Fall back to Primary Peer Gateway when possible** and set desired **Fall Back Check Interval** time.

Type a secure **Pre-Shared Key** (8-32 characters) which must match your **Branch A's** Pre-Shared Key and click **OK**.

Go to **CONFIGURATION > VPN > IPSec VPN > VPN Connection** and select **Enable**. Type the **Connection Name** used to identify this VPN connection. Select scenario as **Site-to-site** and VPN Gateway which is configured in Step 1.

CONFIGURATION > VPN > IPSec VPN > VPN Connection > General Settings and VPN Gateway

The screenshot shows the configuration page for a VPN connection. Under the **General Settings** section, the **Enable** checkbox is checked, and the **Connection Name** is set to **Spoke_Branch_B**. The **Advance** checkbox is also checked. Under the **VPN Gateway** section, the **Application Scenario** is set to **Site-to-site**. The **VPN Gateway** dropdown is set to **Spoke_Branch_B**, and the IP addresses **172.16.10.1, 172.100.110.1** are listed.

Click **Create new Object** to add the address of local network behind **Branch B** and an address of local network behind **Hub_HQ**.

CONFIGURATION > VPN > IPSec VPN > VPN Connection > Create new Object Local Policy

The screenshot shows the **Add Address Rule** dialog box. The **Name** is **Spoke_Branch_B_LO**, the **Address Type** is **SUBNET**, the **Network** is **192.168.169.0**, and the **Netmask** is **255.255.255.0**.

Remote Policy

The screenshot shows the **Add Address Rule** dialog box. The **Name** is **Hub_HQ**, the **Address Type** is **SUBNET**, the **Network** is **192.168.168.0**, and the **Netmask** is **255.255.255.0**.

Set **Local Policy** to be **Spoke_Branch_B_LOCAL** and **Remote Policy** to **Hub_HQ** which are newly created. Click **OK**.

CONFIGURATION > VPN > IPSec VPN > VPN Connection > Policy

Policy	
Local policy:	<input type="text" value="Spoke_Branch_B_L"/> SUBNET, 192.168.169.0/24
Remote policy:	<input type="text" value="Hub_HQ"/> SUBNET, 192.168.168.0/24
<input type="checkbox"/> Advance

What Could Go Wrong?

If you see [info] or [error] log message such as below, please check ZyWALL/USG Phase 1 Settings. All ZyWALL/USG units must use the same Pre-Shared Key, Encryption, Authentication method, DH key group and ID Type to establish the IKE SA.

Priority	Category	Message	Note
info	IKE	Recv:[NOTIFY:INVALID_COOKIE]	IKE_LOG
info	IKE	Send:[ID][HASH][NOTIFY:INITIAL_CONTACT]	IKE_LOG
Priority	Category	Message	Note
error	IPSec	SPI: 0x0 (0) SEQ: 0x0 (0) No rule found, Dropping TCP packet	IPSec
error	IPSec	SPI: 0x0 (0) SEQ: 0x0 (0) No rule found, Dropping TCP packet	IPSec
info	IKE	[COOKIE] Invalid cookie, no sa found	IKE_LOG
Priority	Category	Message	Note
info	IKE	Recv:[HASH][NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG

If you see that Phase 1 IKE SA process done but still get [info] log message as below, please check ZyWALL/USG Phase 2 Settings. All ZyWALL/USG units must use the same Protocol, Encapsulation, Encryption, Authentication method and PFS to establish the IKE SA.

19	2017-09-11 ...	info	IKE	[SA] : No proposal chosen	IKE_LOG
20	2017-09-11 ...	info	IKE	[ID] : Tunnel [Server] Phase 2 Local policy mismatch	IKE_LOG
31	2017-09-11 ...	info	IKE	Send:[HASH][SA][NONCE][ID][ID]	IKE_LOG
32	2017-09-11 ...	info	IKE	Phase 1 IKE SA process done	IKE_LOG

Make sure the all ZyWALL/USG units' security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.

By default, NAT traversal is enabled on ZyWALL/USG, so please make sure the remote IPSec device also has NAT traversal enabled.

How to Configure IPsec VPN with ZyWALL IPsec VPN Client

This example shows how to use the VPN Setup Wizard to create a site-to-site VPN between a ZyWALL/USG and a ZyWALL IPsec VPN Client. The example instructs how to configure the VPN tunnel between each site. When the VPN tunnel is configured, each site can be accessed securely.

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25) and ZyWALL IPsec VPN

ZyWALL IPsec VPN Client with VPN Tunnel Connected

Set Up the ZyWALL/USG IPsec VPN Tunnel

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings for Configuration Provisioning** wizard to create a VPN rule that can be used with the ZyWALL IPsec VPN Client. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome

VPN Setup Wizard

Wizard Type > VPN Settings > Wizard Completed
1 2 3

Welcome

- VPN Settings
 - Wizard Type
 - VPN Settings
 - Wizard Completed
- VPN Settings for Configuration Provisioning**

 - Wizard Completed
- VPN Settings for L2TP VPN Settings
 - VPN Settings
 - General Settings
 - Wizard Completed

Choose **Express** to create a VPN rule with the default phase 1 and phase 2 settings and use a pre-shared key to be the authentication method. Click **Next**.

Quick Setup > VPN Setup Wizard > Wizard Type

VPN Setup Wizard

Wizard Type > VPN Settings > Wizard Completed
1 2 3

Please select the type of VPN policy you wish to setup.

Type of VPN policy

- Express**
- Advanced

Type the **Rule Name** used to identify this VPN connection (and VPN gateway). You may use 1-31 alphanumeric characters. This value is case-sensitive. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome > Wizard Type > VPN Settings-1

The screenshot shows the 'VPN Setup Wizard' interface. At the top, there is a breadcrumb trail: 'Wizard Type > VPN Settings > Wizard Completed'. Below this, three numbered steps (1, 2, 3) are shown in a blue bar, with step 2 being the active step. The main content area is titled 'Express Settings' and includes the following fields:

- IKE Version:** Two radio buttons are present: 'IKEv1' (selected) and 'IKEv2'.
- Scenario:** A text input field for 'Rule Name' contains 'WIZ_VPN_PROVISIONING', which is highlighted with a red box. Below it, the 'Application Scenario' is set to 'Remote Access (Server Role)'.

Type a secure **Pre-Shared Key** (8-32 characters). Set **Local Policy** to be the IP address range of the network connected to the ZyWALL/USG.

Quick Setup > VPN Setup Wizard > Welcome > Wizard Type > VPN Settings-2

The screenshot shows the 'VPN Setup Wizard' interface, specifically the 'Configuration' section. The breadcrumb trail is 'Wizard Type > VPN Settings > Wizard Completed', and step 2 is active. The 'Express Settings' section includes the following fields:

- Secure Gateway:** Set to 'Any'.
- Pre-Shared Key:** A text input field containing 'zyx12345', highlighted with a red box.
- Local Policy (IP/Mask):** A text input field containing '192.168.1.33', highlighted with a red box, followed by a slash and another text input field containing '255.255.255.0', also highlighted with a red box.
- Remote Policy (IP/Mask):** Set to 'Any'.

This screen provides a read-only summary of the VPN tunnel. Click **Save**.

Quick Setup > VPN Setup Wizard > Welcome > Wizard Type > VPN Settings-3

VPN Setup Wizard

Wizard Type > **VPN Settings** > Wizard Completed

1 2 3

Express Settings

Summary

Rule Name:	WIZ_VPN_PROVISIONING

Set Up the ZyWALL IPSec VPN Client

Download **ZyWALL IPSec VPN Client** software from ZyXEL Download Library:

http://www.zyxel.com/support/download_landing.shtml

Open ZyWALL IPSec VPN Client, select **CONFIGURATION > Get from Server**.

CONFIGURATION > Get from Server

Enter the WAN IP address or URL for the ZyWALL/USG in the **Gateway Address**. If you changed the default HTTPS **Port** on the ZyWALL/USG, and then enter the new one here. Enter the **Login** user name and **Password** exactly as configured on the ZyWALL or external authentication server. Click **Next**, you will see it's processing VPN configuration from the server.

CONFIGURATION > Get from Server > Step 1: Authentication

VPN Configuration Server Wizard

Step 1: Authentication

What are the parameters of the VPN Server Connection?

You are going to download your VPN Configuration from the VPN Configuration Server. Enter below the authentication information required for the connection to the server.

Gateway Address: 172.124.163.150 Port: 443

Authentication: Login + Password

Login: Remote_Client

Password: •••••

Next > Cancel

CONFIGURATION > Get from Server > Step 2: Processing

VPN Configuration Server Wizard

Step 2: Processing...

Requesting the VPN Configuration.

Downloading the VPN Configuration from the server:

Progress bar: [Green bar]

- ✓ Init Ok.
- ✓ Init crx server (172.124.163.150) Ok.
- ⓘ Send https request...

Receive Config. from Server...

Write Config. file...

Apply Config. file...

< Previous Cancel

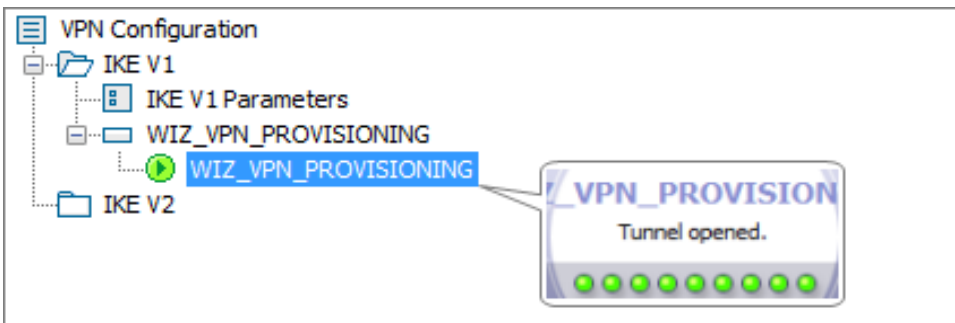

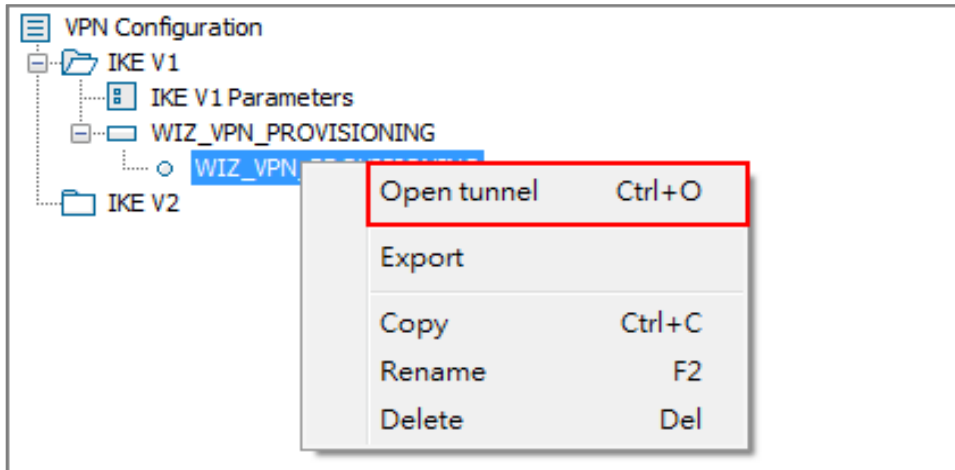

Then, you will see the **Configuration successful** page, click **OK** to exit the wizard.

CONFIGURATION > Get from Server > Configuration successful

Go to **VPN Configuration > IKEv1**, right click the **WIZ_VPN_PROVISIONING** and select **Open tunnel**. You will see the **Tunnel opened** on the bottom right of the screen.

VPN CONFIGURATION > IKE V1 > WIZ_VPN_PROVISIONING > Open tunnel

Test the IPSec VPN Tunnel

Go to ZyWALL/USG **CONFIGURATION > VPN > IPSec VPN > VPN Connection**, the **Status** connect icon is lit when the interface is connected.

CONFIGURATION > VPN > IPSec VPN > VPN Connection

Go to ZyWALL/USG **MONITOR > VPN Monitor > IPSec** and verify the tunnel **Up Time** and **Inbound(Bytes)/Outbound(Bytes)** Traffic.

MONITOR > VPN Monitor > IPSec

#	S...	Sy...	Name	Policy	My Address	Secure Gateway	Up Time	Timeout	Inbound(Bytes)	Outbound(Bytes)
1	N/A	N/A	WIZ_VPN_PROVISIONING	192.168.1.0/24<=>172.101.30.73	172.101.30.150	D: 172.101.30.73	6	86414	21(1854 bytes)	0(0 bytes)

To test whether or not a tunnel is working, ping from a computer at one site to a computer at the other. Ensure that both computers have Internet access (via the IPSec devices).

PC with ZyWALL IPSec VPN Client installed > Window 7 > cmd > ping 192.168.1.33

```
C:\Documents and Settings\ZYXEL>ping 192.168.1.33

Pinging 192.168.1.33 with 32 bytes of data:

Reply from 192.168.1.33: bytes=32 time=27ms TTL=43
Reply from 192.168.1.33: bytes=32 time=32ms TTL=43

    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 16ms, Maximum = 18ms, Average = 17ms
```

What Can Go Wrong?

If you see [info] log message such as below, please make sure both ZyWALL/USG and ZyWALL IPSec VPN Client use the same **Pre-Shared Key** to establish the IKE SA.

MONITOR > Log

Priority	Category	Message	Note
info	IKE	Send:[NOTIFY:INVALID_PAYLOAD_TYPE]	IKE_LOG
info	IKE	Invalid payload type in encrypted payload chain, possibly because of different pre-shared keys	IKE_LOG

If you see [info] or [error] log message such as below, please check ZyWALL/USG Phase 1 Settings. ZyWALL/USG and ZyWALL IPSec VPN Client must use the same Encryption, Authentication method, DH key group and ID Type/Content to establish the IKE SA.

MONITOR > Log

info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[SA] : Tunnel [WIZ_VPN_PROVISIONING] Phase 1 proposal mismatch	IKE_LOG

If you see that Phase 1 IKE SA process done but still get [alert] or [info] log message as below, please check ZyWALL/USG Phase 2 Settings. ZyWALL/USG and ZyWALL IPSec VPN Client must use the same Active Protocol, Encapsulation, Proposal, PFS and set correct Local Policy to establish the IKE SA.

MONITOR > Log

info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[SA] : Tunnel [WIZ_VPN_PROVISIONING] Phase 2 proposal mismatch	IKE_LOG

info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[ID] : Tunnel [WIZ_VPN_PROVISIONING] Phase 2 Local policy mismatch	IKE_LOG

If you see [alert] log message as below, please make sure you create a user account for the ZyWALL IPSec VPN Client user on ZyWALL/USG or the external authentication server. Or please check your password matches the settings in the user account.

MONITOR > Log

Priority	Cate...	Message	Note
alert	User	Failed login attempt to Device from http/https (incorrect password or inexistent username)	Account: Remote_Client

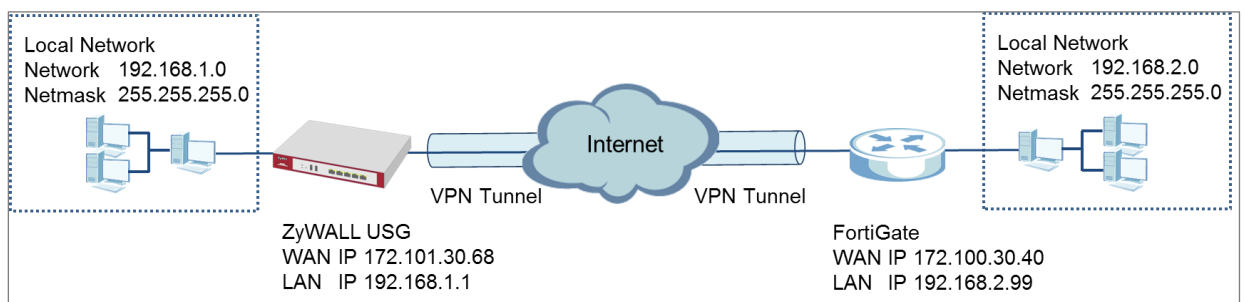

Make sure the service HTTPS **Port** on IPsec VPN Client application is available.

Make sure the To-ZyWALL security policies allow IPsec VPN traffic to the ZyWALL/USG. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.

The ZyWALL/USG supports UDP port 500 and UDP port 4500 for NAT traversal. If you enable this, make sure the To-ZyWALL security policies allow UDP port 4500 too.

How to Configure Site-to-site IPSec VPN with FortiGate

This example shows how to use the VPN Setup Wizard to create a site-to-site VPN between a ZYWALL/USG and a FortiGate router. The example instructs how to configure the VPN tunnel between each site. The example instructs how to configure the VPN tunnel between each site. When the VPN tunnel is configured, each site can be accessed securely.

ZyWALL Site-to-site IPSec VPN with FortiGate Connected

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25) and FortiGate 100D

Set Up the IPSec VPN Tunnel on the ZyWALL/USG

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings** wizard to create a VPN rule that can be used with the FortiGate. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome

Pre-Shared Key:	ZyXEL123
Local Policy (IP/Mask):	192.168.1.0 / 255.255.255.0
Remote Policy (IP/Mask):	192.168.2.0 / 255.255.255.0

Now the rule is configured on the ZyWALL/USG. The Phase 1 rule settings appear in the **VPN > IPSec VPN > VPN Gateway** screen and the Phase 2 rule settings appear in the **VPN > IPSec VPN > VPN Connection** screen. Click **Close** to exit the wizard.

Quick Setup > VPN Setup Wizard > Welcome > Wizard Type > VPN Settings > Wizard Completed

Go to **CONFIGURATION > VPN > IPSec VPN > VPN Gateway** and click **Show Advanced Settings**. Configure **Authentication > Peer ID Type** as **Any** to let the ZyWALL/USG does not require to check the identity content of the remote IPSec router.

CONFIGURATION > VPN > IPSec VPN > VPN Gateway > Show Advanced Settings > Authentication > Peer ID Type

The screenshot shows the 'Authentication' configuration page. Under the 'Advance' section, the 'Peer ID Type' dropdown menu is highlighted with a red box and is set to 'Any'. Other settings include 'Local ID Type' set to 'IPv4', 'Content' set to '0.0.0.0', and 'Peer ID Content' set to '172.100.30.40'. The 'Pre-Shared Key' is masked with dots, and 'Certificate' is set to 'default'.

Set Up the IPSec VPN Tunnel on the FortiGate

In the FortiGate **VPN > IPsec > Wizard > Custom VPN Tunnel (No Template)**, use the **VPN Setup** to create a **Site-to-site VPN** rule **Name**.

VPN > IPsec > Wizard > Custom VPN Tunnel (No Template)

The screenshot shows the 'VPN Setup' wizard. The 'Name' field contains 'WIZ_VPN_ZyWALL'. Under the 'Template' section, 'Custom VPN Tunnel (No Template)' is selected and highlighted with a red box. Other templates listed include 'Dialup - FortiClient (Windows, Mac OS, Android)', 'Site to Site - FortiGate', 'Dialup - iOS (Native)', 'Dialup - Android (Native L2TP/IPsec)', 'Dialup - Cisco Firewall', and 'Site to Site - Cisco'. Navigation buttons for '< Back', 'Next >', and 'Cancel' are visible at the bottom.

Type the **Name** used to identify this VPN connection, configure **Remote Gateway** IP as the peer ZyWALL/USG's WAN IP address. Select the **Interface** which is connected to the Internet.

VPN > IPsec > Wizard > Custom VPN Tunnel (No Template) > Network

Name: **WIZ_VPN_ZyWALL**

OK **Cancel**

Test the IPsec VPN Tunnel

Go to ZyWALL/USG **CONFIGURATION > VPN > IPsec VPN > VPN Connection**, click **Connect** on the upper bar. The **Status** connect icon is lit when the interface is connected.

CONFIGURATION > VPN > IPsec VPN > VPN Connection

#	Status	Name	VPN Gateway	Policy
1		WIZ_VPN_FortiGate	WIZ_VPN_FortiGate	WIZ_VPN_Fortigate_Local/WIZ_VPN_Fortigate_REMOTE

Go to ZyWALL/USG **MONITOR > VPN Monitor > IPsec** and verify the tunnel **Up Time** and **Inbound(Bytes)/Outbound(Bytes)** traffic.

MONITOR > VPN Monitor > IPsec

#	Serial Number	System Name	Name	Policy	My Address	Secure Gatew...	Up Time	Timeout	Inbound...	Outbou...
1	N/A	N/A	WIZ_VPN_FortiGate	192.168.1.0/...	172.101.30.68	P: 172.100.30.40	68	79132	0(0 bytes)	0(0 bytes)

Go to FortiGate **VPN > Monitor > IPsec Monitor** and check the tunnel **Status** is up and **Incoming Data/Outgoing Data** traffic.

VPN > Monitor > IPsec Monitor

Name	Type	Remote Gateway	Status	Incoming Data	Outgoing Data
WIZ_VPN_ZyWALL	Static IP or Dynamic DNS	172.101.30.68	Up	8.09 KB	13.78 KB

To test whether or not a tunnel is working, ping from a computer at one site to a computer at the other. Ensure that both computers have Internet access (via the IPsec devices).

PC behind ZyWALL/USG > Window 7 > cmd > ping 192.168.2.33

```
C:\Documents and Settings\ZyXEL>ping 192.168.2.33

Pinging 192.168.2.33 with 32 bytes of data:

Reply from 192.168.1.33: bytes=32 time=27ms TTL=43

Ping statistics for 192.168.1.33:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 26ms, Maximum = 32ms, Average = 28ms
```

What Could Go Wrong?

If you see below [info] or [error] log message, please check ZyWALL/USG Phase 1 Settings. Both ZyWALL/USG and FortiGate must use the same Pre-Shared Key, Encryption, Authentication method, DH key group and ID Type to establish the IKE SA.

MONITOR > Log

Priority	Category	Message	Note
info	IKE	Send:[NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG
info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[SA] : Tunnel [WIZ_VPN_FortiGate] Phase 1 proposal mismatch	IKE_LOG
info	IKE	The cookie pair is : 0x70fb3b31ed922dc4 / 0x07f7812272f2e1a2 [count=3]	IKE_LOG
info	IKE	Recv IKE sa: SA([0] protocol = IKE (1), AES CBC key len = 192, HMAC-SHA256 PRF, HMAC-SHA256-1...	IKE_LOG

If you see that Phase 1 IKE SA process done but still get below [info] log message,

please check ZyWALL/USG and FortiGate Phase 2 Settings. Both ZyWALL/USG and FortiGate must use the same Protocol, Encapsulation, Encryption, Authentication method and PFS to establish the IKE SA.

MONITOR > Log

info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[SA] : Tunnel [WIZ_VPN_FortiGate] Phase 2 proposal mismatch	IKE_LOG
info	IKE	Recv:[HASH][SA][NONCE][ID][ID]	IKE_LOG
info	IKE	Phase 1 IKE SA process done	IKE_LOG

Make sure the both ZyWALL/USG and FortiGate security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.

Default NAT traversal is enable on ZyWALL/USG, please make sure the remote IPSec device must also have NAT traversal enabled.

How to Configure Site-to-site IPSec VPN with WatchGuard

This example shows how to use the VPN Setup Wizard to create a site-to-site VPN between a ZYWALL/USG and a WatchGuard router. The example instructs how to configure the VPN tunnel between each site. When the VPN tunnel is configured, each site can be accessed securely.

ZyWALL Site-to-site IPSec VPN with WatchGuard Connected

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25) and WatchGuard XTM 515 (Firmware Version: 11.10.4).

Set Up the IPSec VPN Tunnel on the ZyWALL/USG

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings** wizard to create a VPN rule that can be used with the WatchGuard. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome

VPN Setup Wizard

Wizard Type > VPN Settings > Wizard Completed

1 2 3

Network IP: 192.168.1.0 / 24

Direction: bi-directional

Enable broadcast routing over the tunnel

OK Cancel

Go to **VPN > Branch Office VPN > Tunnel > Phase 2 Settings** to create a **Tunnel Name**. Then, select the **Gateway**. Make sure you enable **Perfect Forward Secrecy** and select **Diffie-Hellman Group 2**. Then, scroll down **Phase 2 Proposals** and add the encryption types to match your ZyWALL/USG's **VPN Connection > Phase 2 Settings**. Click **Save**.

VPN > Branch Office VPN > Tunnel > Phase 2 Settings

The screenshot shows the 'Tunnel' configuration window with the 'Phase 2 Settings' tab selected. The 'Tunnel Name' is 'VPN_to_ZyWALL' and the 'Gateway' is 'VPN to ZyWALL'. Under 'Perfect Forward Secrecy', the 'Enable Perfect Forward Secrecy' checkbox is checked, and 'Diffie-Hellman Group 2' is selected. The 'IPSec Proposals' section contains an empty 'Phase 2 Proposals' table with 'Remove', 'Up', and 'Down' buttons. Below the table is a dropdown menu with 'ESP-3DES-MD5' selected, an 'Add' button, and a list of encryption types: 'ESP-AES-SHA1', 'ESP-AES-MD5', 'ESP-3DES-SHA1', and 'ESP-DES-SHA1'. The 'Save' button is highlighted.

Test the IPsec VPN Tunnel

Go to ZyWALL/USG **CONFIGURATION > VPN > IPsec VPN > VPN Connection**, click **Connect** on the upper bar. The **Status** connect icon is lit when the interface is connected.

CONFIGURATION > VPN > IPsec VPN > VPN Connection

Go to ZyWALL/USG **MONITOR > VPN Monitor > IPsec** and verify the tunnel **Up Time** and **Inbound(Bytes)/Outbound(Bytes)** traffic.

MONITOR > VPN Monitor > IPsec

The screenshot shows the 'VPN Monitor' page for IPsec. It features a toolbar with 'Disconnect' and 'Connection Check' buttons. Below is a table with columns: #, Serial Num..., System Na..., Name, Policy, My Address, Secure Gateway, Up Time, Timeout, Inbound[B..., and Outbound[...]. The first row shows a connection named 'VPN_to_WatchGuard' with an up time of 97 and a timeout of 76223. Inbound and Outbound traffic are both 0 bytes.

#	Serial Num...	System Na...	Name	Policy	My Address	Secure Gateway	Up Time	Timeout	Inbound[B...	Outbound[...
1	N/A	N/A	VPN_to_WatchGuard	192.168.1.0/24...	172.101.30.73	P:172.100.30.63	97	76223	0[0 bytes]	0[0 bytes]

Go to WatchGuard **System Status > VPN Statistics > Branch Office VPN** and check the tunnel **Status** is up and **Bytes In** (Incoming Data) and **Bytes Out** (Outgoing Data).

System Status > VPN Statistics > Branch Office

The screenshot shows the 'VPN Statistics' page for 'Branch Office VPN'. It includes a 'Refresh Interval (30s)' slider set to 5, a 'Pause' button, and a 'Copy' button. Below is a table with columns: Name, Local, Remote, Gateway, Packets In, Bytes In, Packets Out, Bytes Out, and Rekeys. The first row shows 'VPN_to_ZyWALL' with 265 packets in, 15900 bytes in, 384 packets out, and 23635 bytes out.

Name	Local	Remote	Gateway	Packets In	Bytes In	Packets Out	Bytes Out	Rekeys
VPN_to_ZyWALL	192.168.10.0/24	192.168.1.0/24	172.100.30.63 -172.101.30.73	265	15900	384	23635	0

To test whether or not a tunnel is working, ping from a computer at one site to a computer at the other. Ensure that both computers have Internet access (via the IPsec devices).

PC behind ZyWALL/USG > Window 7 > cmd > ping 192.168.10.33

```
C:\Documents and Settings\ZyXEL>ping 192.168.10.33

Nailed-Up:	true

Go to **CONFIGURATION > VPN > IPsec VPN > VPN Gateway** and click **Show Advanced Settings**. Configure **Authentication > Peer ID Type** as **Any** to let the ZyWALL/USG does not require to check the identity content of the remote IPsec router.

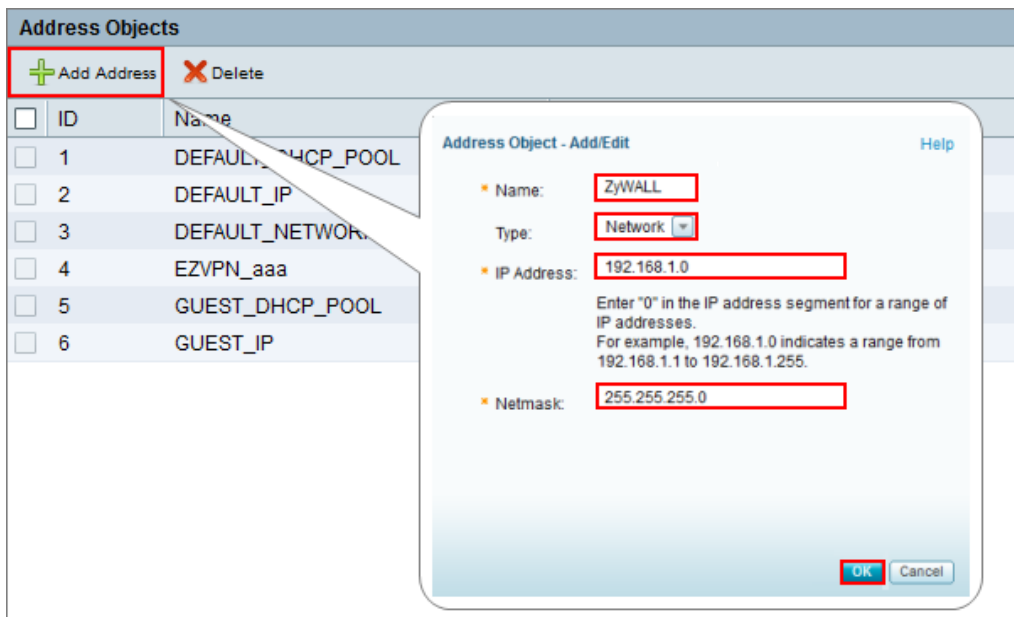

The screenshot shows the 'Authentication' configuration page. Under the 'Advance' section, the 'Peer ID Type' is set to 'Any', which is highlighted with a red rectangular box. Other visible settings include 'Local ID Type' set to 'IPv4' and 'Content' set to '0.0.0.0'.

CONFIGURATION > VPN > IPsec VPN > VPN Gateway > Show Advanced Settings > Authentication > Peer ID Type

Set Up the IPsec VPN Tunnel on the Cisco

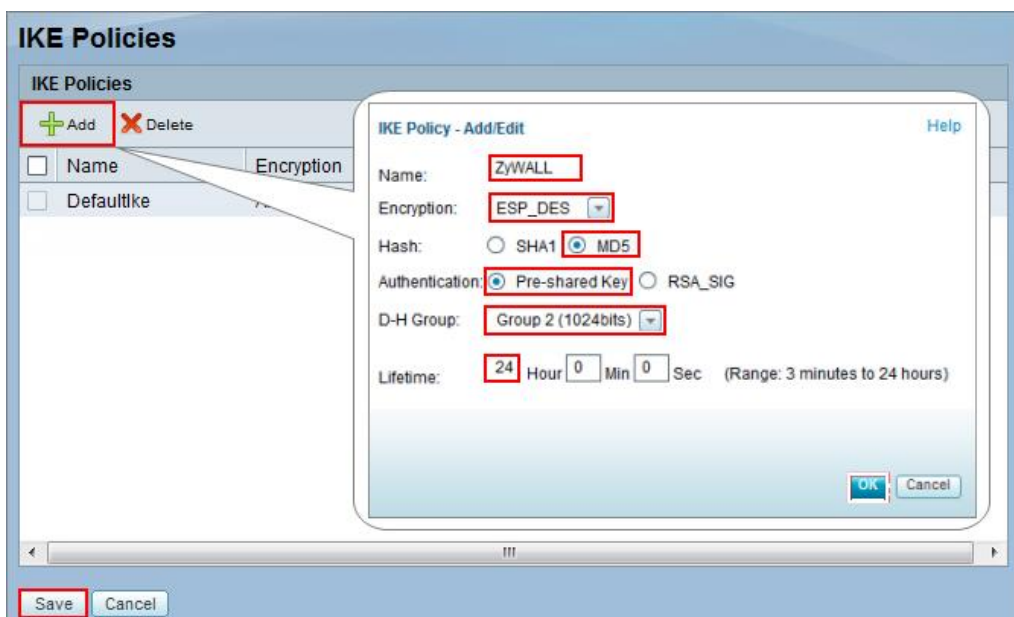

To create an **Address Object Name** of your peer ZyWALL/USG Local IP address, go to **Networking > Address Management > Address Objects** and click **Add Address**. Select **Network** as the **Type**. Configure **IP Address** and **Netmask** to be the IP address range of the network connected to the ZyWALL/USG. Click **OK**.

Networking > Address Management > Address Objects

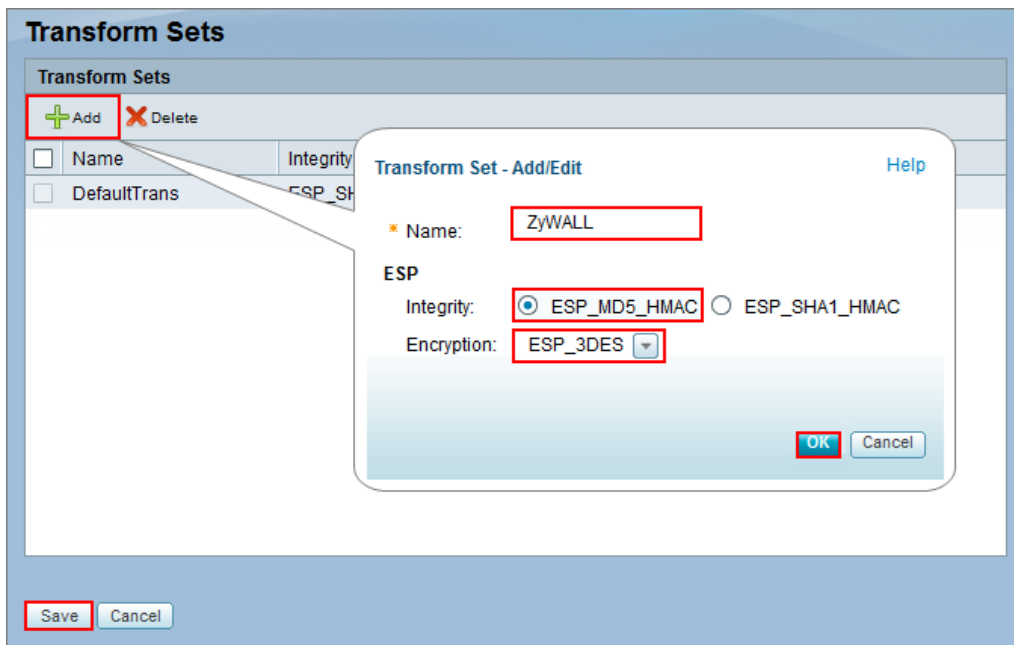

Go to **VPN > Site-to-site > IKE Policies**, click **Add** to create a new IKE Policy **Name**. Then, select **Encryption**, **Hash**, **Pre-shared Key** and **D-H Group** to match your ZyWALL/USG's **VPN Gateway > Phase 1 Settings**. Set **Lifetime** to **24** hours and click **OK** then click **Save** to exit the **IKE Policies** page.

VPN > Site-to-site > IKE Policies

Go to **VPN > Site-to-site > Transform Sets**, click **Add** to create a new **Transform Set** name. Then, select **Integrity** and **Encryption** to match your ZyWALL/USG's **VPN Connection > Phase 2 Settings**. Click **OK** and click **Save** to exit the **Transform Sets** page.

VPN > Site-to-site > Transform Sets

Go to **VPN > Site-to-site > IPsec Policies** and click **Add**. The new **IPsec Policies** dialog box appears. Go to **Basic Settings**, create IPsec policy **Description** name and click **On** the **IPsec Policy Enable** option.

Select **Static IP** as the **Remote Type**. Set **Remote Address** to be your ZyWALL/USG's WAN IP Address (in the example, 172.101.30.73). Enter the same **Pre-Shared Key** as you created in ZyWALL/USG. Then, set **WAN Interface** to the Internet-facing interface (found under **Status > WAN Interface**).

Select **Local network** to be the IP address range of the network connected to the Cisco (found under **Status > LAN Interface**) and **Remote network** to be the IP

address range of the network connected to the ZyWALL/USG (**Address Object** created in Step 1)

VPN > Site-to-site > IPsec Policies > Basic Settings

 **Do you want to make this connection active when the settings are saved?**

Test the IPsec VPN Tunnel

Go to ZyWALL/USG **CONFIGURATION > VPN > IPsec VPN > VPN Connection**, click **Connect** on the upper bar. The **Status** connect icon is lit when the interface is connected.

CONFIGURATION > VPN > IPsec VPN > VPN Connection

Go to ZyWALL/USG **MONITOR > VPN Monitor > IPsec** and verify the tunnel **Up Time** and **Inbound(Bytes)/Outbound(Bytes)** traffic.

MONITOR > VPN Monitor > IPsec

Go to Cisco **VPN > VPN Status > IPsec VPN Status > Active Sessions** and check the tunnel **Status** is up.

VPN > VPN Status > IPsec VPN Status > Active Sessions

Go to Cisco **VPN > VPN Status > IPsec VPN Status > Statics** and check the **Tx Packets** (Transmit data) and **Rx Packets** (Receive data).

VPN > VPN Status > IPsec VPN Status > Statics

Active Sessions		Statistics	Teleworker VPN Client				
IPsec VPN Statistic							
Name	VPN Type	WAN Interface	Remote Gateway	Tx Bytes	Rx Bytes	Tx Packets	Rx Packets
VPN_to_ZyWALL	Site to Site	WAN1	172.101.30.73	60665	45180	758	753

To test whether a tunnel is working, ping from a computer at one site to a computer at the other. Ensure that both computers have Internet access (via the IPsec devices).

PC behind ZyWALL/USG > Window 7 > cmd > ping 192.168.75.33

```
C:\Documents and Settings\ZyXEL>ping 192.168.75.33

Pinging 192.168.75.33 with 32 bytes of data:

Reply from 192.168.75.33: bytes=32 time=18ms TTL=54
Reply from 192.168.75.33: bytes=32 time=17ms TTL=54
Reply from 192.168.75.33: bytes=32 time=17ms TTL=54
Reply from 192.168.75.33: bytes=32 time=16ms TTL=54

Ping statistics for 192.168.75.33:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 16ms, Maximum = 18ms, Average = 17ms
```

PC behind Cisco > Window 7 > cmd > ping 192.168.1.33

```
C:\Documents and Settings\ZyXEL>ping 192.168.1.33

Pinging 192.168.1.33 with 32 bytes of data:

Reply from 192.168.1.33: bytes=32 time=27ms TTL=43
Reply from 192.168.1.33: bytes=32 time=32ms TTL=43
Reply from 192.168.1.33: bytes=32 time=26ms TTL=43

info	IKE	Phase 1 IKE SA process done	172.101.30.73:500	172.100.30.80:500	IKE_LOG

Make sure the both ZyWALL/USG and Cisco security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.

Default NAT traversal is enable on ZyWALL/USG, please make sure the remote IPSec device must also have NAT traversal enabled.

How to Configure Site-to-site IPsec VPN with a SonicWALL router

This example shows how to use the VPN Setup Wizard to create a site-to-site VPN between a ZYWALL/USG and a SonicWALL router. The example instructs how to configure the VPN tunnel between each site. When the VPN tunnel is configured, each site can be accessed securely.

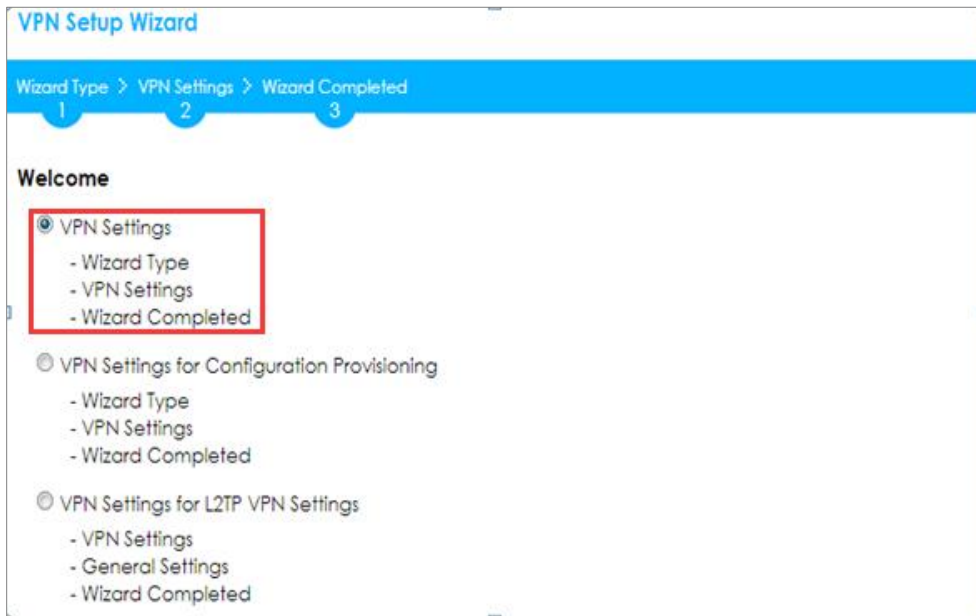

ZyWALL/USG Site-to-site IPsec VPN with SonicWALL

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25) and NSA240 (Firmware Version: SonicOS Enhanced 5.8.0.1-31o)

Set Up the IPSec VPN Tunnel on the ZyWALL/USG

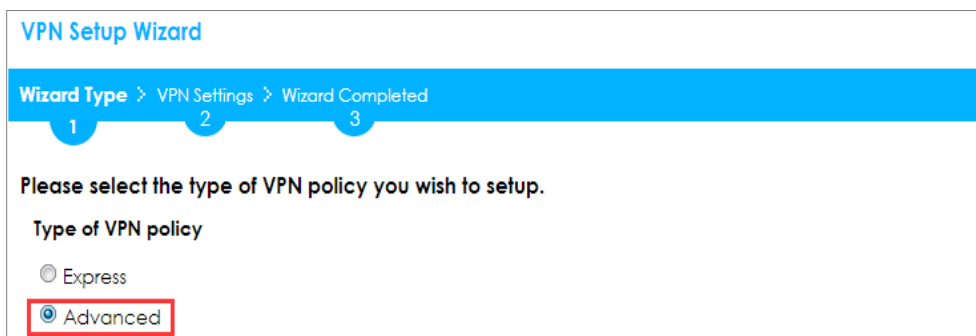

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings** wizard to create a VPN rule that can be used with the SonicWALL. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome

Choose **Advanced** to create a VPN rule with the customize phase 1, phase 2 settings and authentication method. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome > Wizard Type

Type the **Rule Name** used to identify this VPN connection (and VPN gateway). You may use 1-31 alphanumeric characters. This value is case-sensitive. Select the rule to be **Site-to-site**. Click **Next**.

Quick Setup > VPN Setup Wizard > Wizard Type > VPN Settings (Scenario)

Remote Access (Client Role)

Then, configure the **Secure Gateway** IP as the SonicWALL's Gateway IP address (in the example, 172.100.20.23); select **My Address** to be the interface connected to the Internet.

Set the desired **Negotiation, Encryption, Authentication, Key Group** and **SA Life Time** settings. Type a secure **Pre-Shared Key** (8-32 characters) which must match your SonicWALL **Shared Secret**.

Make sure the both ZyWALL/USG and SonicWALL security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.

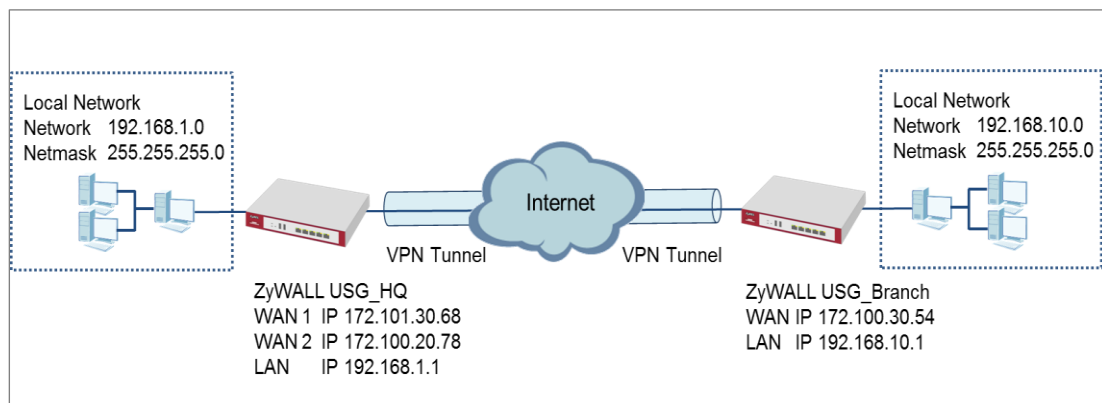

Default NAT traversal is enable on ZyWALL/USG, please make sure the remote IPSec device must also have NAT traversal enabled.

How to Configure IPsec VPN Failover

This example shows how to use the VPN Setup Wizard to create a site-to-site VPN with failover. The example instructs how to configure the VPN tunnel between each site if one site has multi-WAN. When the multi-WAN VPN failover is configured, IPsec VPN tunnels automatically fail over to a backup WAN interface if the primary WAN interface becomes unavailable.

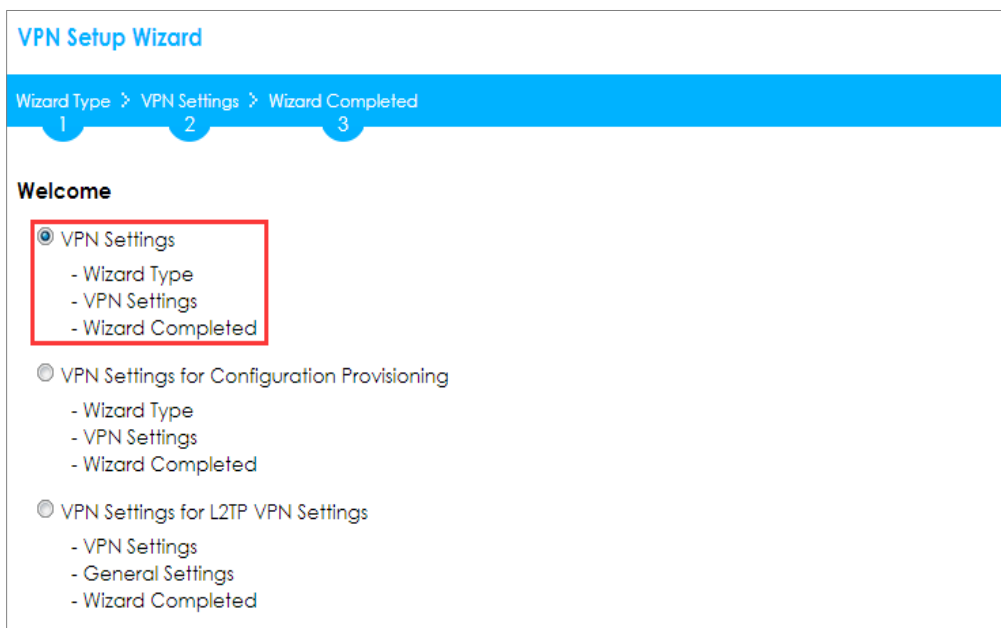

ZyWALL Site-to-site IPsec VPN with multiple WAN failover

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG110 (Firmware Version: ZLD 4.25).

Set Up the ZyWALL/USG IPSec VPN Tunnel of Corporate Network (HQ)

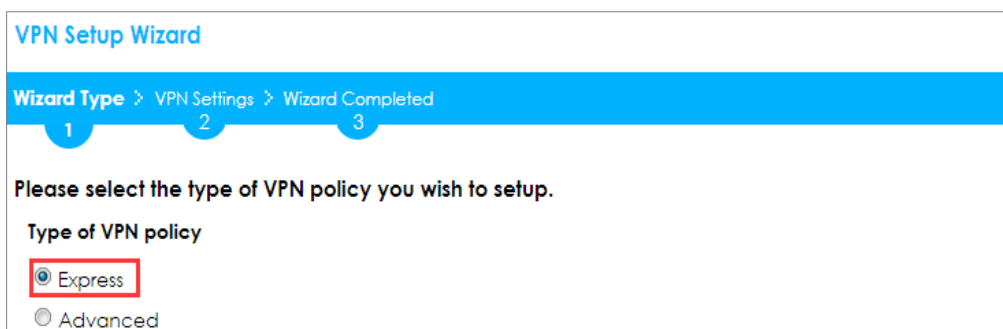

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings** wizard to create a VPN rule that can be used with the remote ZyWALL/USG. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome

Choose **Express** to create a VPN rule with the default phase 1 and phase 2 settings and use a pre-shared key to be the authentication method. Click **Next**.

Quick Setup > VPN Setup Wizard > Wizard Type

Type the **Rule Name** used to identify this VPN connection (and VPN gateway). You may use 1-31 alphanumeric characters. This value is case-sensitive. Select the rule to be **Site-to-site**. Click **Next**.

Quick Setup > VPN Setup Wizard > Wizard Type > VPN Settings (Scenario)

Set up the WAN Trunk (ZyWALL/USG_HQ)

Go to **CONFIGURATION > Interface > Trunk > User Configuration > Add**. Select wan1 and wan2 into the trunk **Member** and set wan2 **Mode** to be **Passive**.

CONFIGURATION > Interface > Trunk > User Configuration > Add

+ Add Trunk

Name: Multi_WAN_Failover

Load Balancing Algorithm: Least Load First

Load Balancing Index(es): Outbound

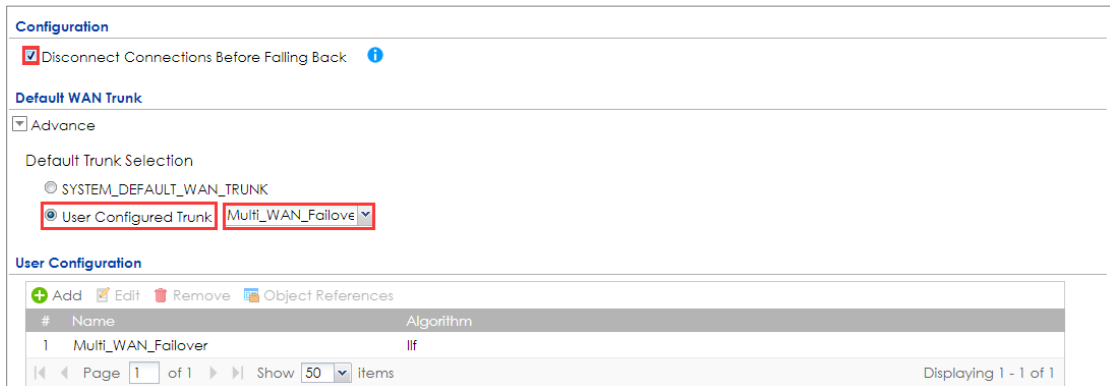

#	Member	Mode	Egress Bandwidth
1	wan1	Active	1048576 kbps
2	wan2	Passive	1048576 kbps

Page 0 of 0 Show 50 items No data to display

OK Cancel

Go to **CONFIGURATION > Interface > Trunk > Configuration**. Select **Disconnect Connection before Falling Back**. In the **Default WAN Trunk**, select **User Configured Trunk** to be the customized WAN trunk added in the previous step (Multi_WAN_Failover in this example).

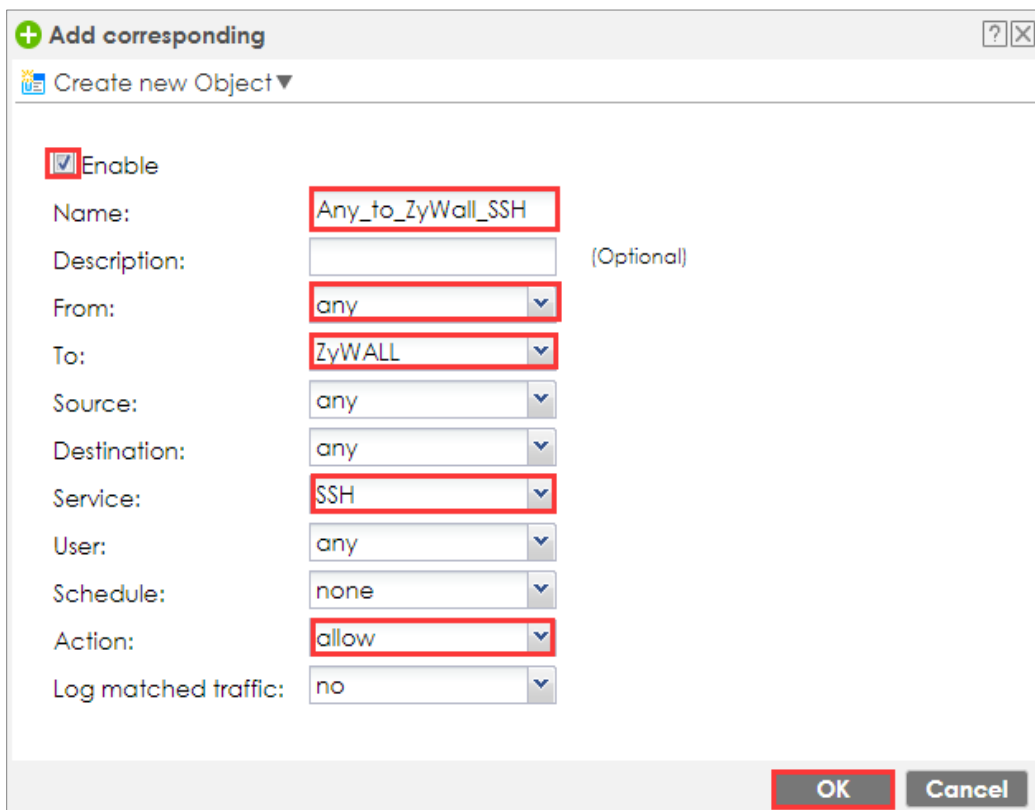

CONFIGURATION > Interface > Trunk > User Configuration > Add

Set up the Failover Command Line (ZyWALL/USG HQ)

Go to **CONFIGURATION > Security Policy > Policy Control** and add a **To ZyWALL** rule to allow **SSH** service.

CONFIGURATION > Security Policy > Policy Control > Add corresponding

If the **Security Policy** is created but still cannot access to ZyWALL, please go to **CONFIGURAITON > System > SSH** to check do you **Enable** the **General Settings** and make sure the **Service Port** is correct and the same in your terminal program. Then, check the **Service Control Action** should be **Accept**.

CONFIGURAITON > System > SSH

Enter the command line in terminal mode (Using Tera Term in this example).

Tera Term command

```

Welcome to USG110

Username: admin
Password:
Router> configure terminal
Router(config)# client-side-vpn-failover-fallback activate
    
```

Test the IPsec VPN Tunnel

- Go to ZYWALL/USG **CONFIGURATION > VPN > IPsec VPN > VPN Connection**, click **Connect** on the upper bar. The **Status** connect icon is lit when the interface is connected.

CONFIGURATION > VPN > IPsec VPN > VPN Connection

- 9 Go to ZyWALL/USG MONITOR > VPN Monitor > IPSec and verify the tunnel Up Time and Inbound(Bytes)/Outbound(Bytes) Traffic.

MONITOR > VPN Monitor > IPSec

#	Name	Policy	My Address	Secure Gateway	Up Time	Timeout	Inbound(Bytes)	Outbound(Bytes)
1	test	192.168.10.0/24<>192.168...	172.100.30.54	P: 172.101.30.68	10	79190	0(0 bytes)	0(0 bytes)

- 10 Go to ZyWALL/USG_Branch **MONITOR > Log**. Try to disconnect WAN1 interface (172.1.1.30.68) and you will see the VPN tunnel failover to WAN2 interface (172.100.20.78).

- 13** Make sure the both ZyWALL/USG at the HQ and Branch sites security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.
- 14** Default NAT traversal is enable on ZyWALL/USG, please make sure the remote IPSec device must also have NAT traversal enabled.

How to Configure L2TP over IPsec VPN while the ZyWALL/USG is behind a NAT router

This example shows how to use the VPN Setup Wizard to create a L2TP over IPsec VPN tunnel between ZyWALL/USG devices. The example instructs how to configure the VPN tunnel between each site while the ZyWALL/USG is behind a NAT router. When the L2TP over IPsec VPN tunnel is configured, each site can be accessed securely.

ZyWALL/USG L2TP over IPsec VPN while the ZyWALL/USG is behind a NAT router

 Note:

All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG110 (Firmware Version: ZLD 4.25).

Set Up the L2TP VPN Tunnel on the ZyWALL/USG_HQ

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings for L2TP VPN Settings** wizard to create a **L2TP VPN** rule that can be used with the remote Android Mobile Devices. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome

Then, configure the **Rule Name** and set **My Address** to be the **wan1** interface which is connected to the Internet. Type a secure **Pre-Shared Key** (8-32 characters).

Quick Setup > VPN Setup Wizard > Welcome > VPN Settings

VPN Setup Wizard

VPN Settings > General Settings > Wizard Completed

Test the L2TP over IPSec VPN Tunnel

Use a smartphone or a PC to establish a L2TP VPN connection to the ZyWALL/USG. Configure the NAT's public IP address as the L2TP server address on the client. In this example using iOS device to test the result:

To configure L2TP VPN in an iOS 8.4 device, go to **Menu > Settings > VPN > Add VPN Configuration** and configure as follows.

Description is for you to identify the VPN configuration.

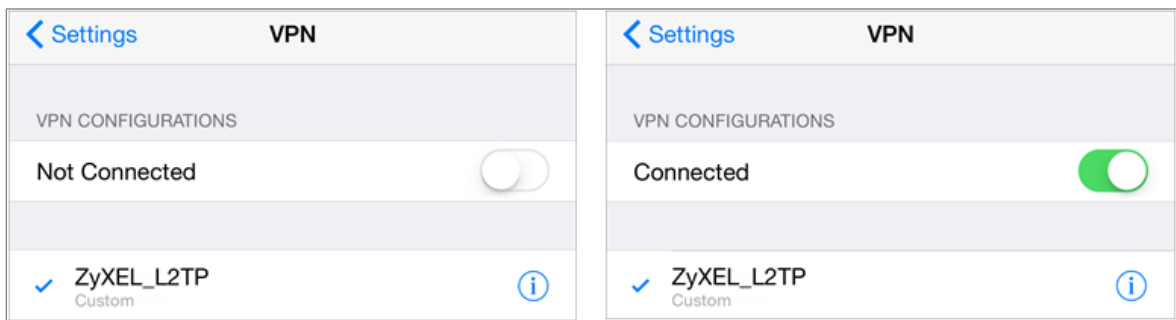

Set **Server** to the ZyWALL/USG's WAN IP address (172.100.20.30 in this example).

Enter **Account** and **Password** which the same as **Allowed User** created in ZyWALL/USG (L2TP_Remote_Users/zyx168 in this example).

Set **Secret** to the **Pre-Shared Key** of the IPSec VPN gateway the ZyWALL/USG uses for L2TP VPN over IPSec (xyz12345 in this example).

After you create a VPN configuration, slide the button right to the on position to initiate L2TP VPN session.

Go to ZyWALL/USG **CONFIGURATION > VPN > IPSec VPN > VPN Connection**, click **Connect** on the upper bar. The **Status** connect icon is lit when the interface is connected.

CONFIGURATION > VPN > IPSec VPN > VPN Connection

IPv4 Configuration				
#	Status	Name	VPN Gateway	Policy
1		WIZ_L2TP_VPN	WIZ_L2TP_VPN	WIZ_L2TP_VPN_LOCAL/

Go to ZyWALL/USG **MONITOR > VPN Monitor > L2TP over IPSec** and verify the **Current L2TP Session**.

MONITOR > VPN Monitor > L2TP over IPSec > L2TP_Remote_Users

Current L2TP Session				
#	User Name	Hostname	Assigned IP	Public IP
1	L2TP_Remote_Users	Android	192.168.10.10	10.214.30.69

Page 1 of 1 | Show 50 items | Displaying 1 - 1 of 1

Go to iOS mobile device **Menu > Settings > VPN > ZyXEL_L2TP** and verify the **Assigned IP Address** and **Connect Time**.

Menu > Settings > VPN > ZyXEL_L2TP

VPN		ZyXEL_L2TP
Type	L2TP	
Server	172.100.20.30

Send All Traffic	<input checked="" type="checkbox"/>	

What Could Go Wrong?

If you see [alert] log message such as below, please check ZyWALL/USG L2TP

Allowed User or **User/Group Settings**. iOS Mobile users must use the same Username and Password as configured in ZyWALL/USG to establish the L2TP VPN.

Priority	Category	Message	Note
alert	L2TP Over IPSec	User L2TP_Remote_Users has been denied from L2TP service.(Incorrect Username or Password)	L2TP_LOG

If you see [info] or [error] log message such as below, please check ZyWALL/USG Phase 1 Settings. iOS Mobile users must use the same **Secret** as configured in ZyWALL/USG to establish the IKE SA.

Priority	Category	Message	Note
info	IKE	Send:[NOTIFY:INVALID_PAYLOAD_TYPE]	IKE_LOG
info	IKE	Invalid payload type in encrypted payload chain, possibly because of different pre-shared keys	IKE_LOG

If you see that Phase 1 IKE SA process has completed but still get [info] log message as below, please check ZyWALL/USG Phase 2 Settings. ZyWALL/USG unit must set correct **Local Policy** to establish the IKE SA.

Priority	Category	Message	Note
info	IKE	ISAKMP SA [WIZ_L2TP_VPN] is disconnected	IKE_LOG
info	IKE	Received delete notification	IKE_LOG
info	IKE	Recv:[HASH][DEL]	IKE_LOG
info	IKE	Send:[HASH][NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG
info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[ID] : Tunnel [WIZ_L2TP_VPN] Phase 2 Local policy mismatch	IKE_LOG

Ensure that the L2TP Address Pool does not conflict with any existing LAN1, LAN2, DMZ, or WLAN zones, even if they are not in use.

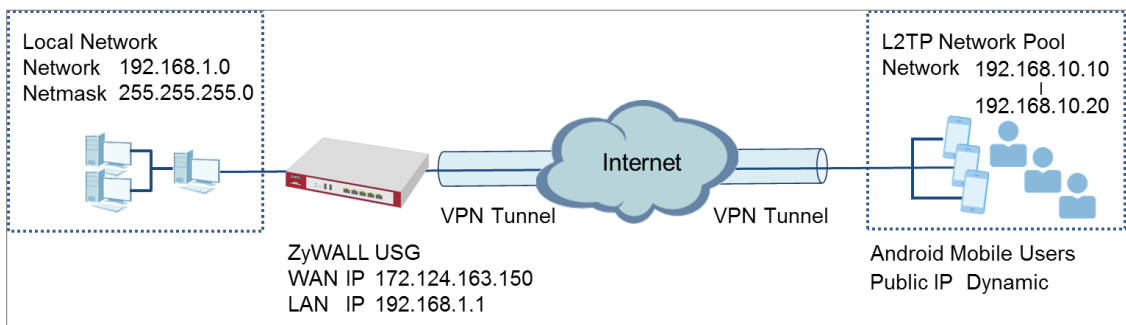

If you cannot access devices in the local network, verify that the devices in the local network set the USG's IP as their default gateway to utilize the L2TP tunnel.

Make sure the ZyWALL/USG units' security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.

Verify that the **Zone** is set correctly in the **Zone** object. This should be set to IPSec_VPN Zone so that security policies are applied properly.

How to Configure L2TP VPN with Android 5.0 Mobile Devices

This example shows how to use the VPN Setup Wizard to create a L2TP VPN between a ZyWALL/USG and an Android 5.0 Mobile Device. The example instructs how to configure the VPN tunnel between each site. When the VPN tunnel is configured, each site can be accessed securely and allow traffic from L2TP clients to go to the Internet.

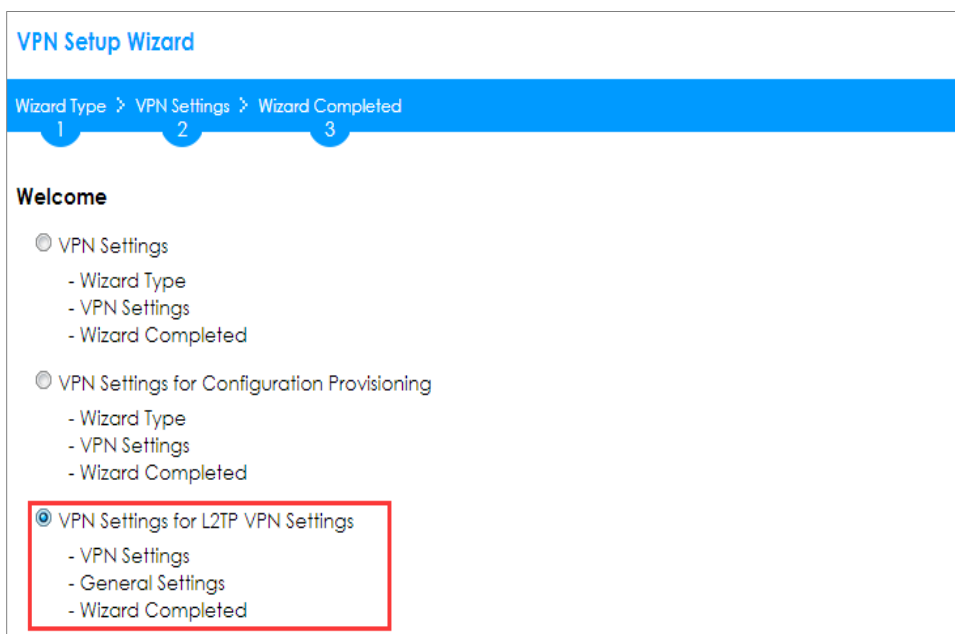

ZyWALL/USG L2TP VPN with Android Mobile Devices Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: 4.25) and Android version (Firmware Version: 5.0)

Set Up the L2TP VPN Tunnel on the ZyWALL/USG

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings for L2TP VPN Settings** wizard to create a **L2TP VPN** rule that can be used with the remote Android Mobile Devices. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome

Then, configure the **Rule Name** and set **My Address** to be the **wan1** interface which is connected to the Internet. Type a secure **Pre-Shared Key** (8-32 characters).

If you see that Phase 1 IKE SA process has completed but still get [info] log message as below, please check ZyWALL/USG Phase 2 Settings. ZyWALL/USG unit must set correct **Local Policy** to establish the IKE SA.

Priority	Category	Message	Note
info	IKE	ISAKMP SA [WIZ_L2TP_VPN] is disconnected	IKE_LOG
info	IKE	Received delete notification	IKE_LOG
info	IKE	Recv:[HASH][DEL]	IKE_LOG
info	IKE	Send:[HASH][NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG
info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[ID] : Tunnel [WIZ_L2TP_VPN] Phase 2 Local policy mismatch	IKE_LOG

Ensure that the L2TP Address Pool does not conflict with any existing LAN1, LAN2, DMZ, or WLAN zones, even if they are not in use.

If you cannot access devices in the local network, verify that the devices in the local network set the USG's IP as their default gateway to utilize the L2TP tunnel.

Make sure the ZyWALL/USG units' security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.

Verify that the **Zone** is set correctly in the **Zone** object. This should be set to IPSec_VPN Zone so that security policies are applied properly.

How to Import ZyWALL/USG Certificate for L2TP over IPsec in Windows 10

This is an example of using the L2TP VPN and VPN client software included in Windows 10 operating systems. When the VPN tunnel is configured, users can securely access the network behind the ZyWALL/USG and allow traffic from L2TP clients to go to the Internet from a Windows 10 computer.

ZyWALL/USG L2TP VPN with Remote Windows 10 Client Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: 4.25) and Windows 10 Pro (Version: 10.0.10240)

Set Up the L2TP VPN Tunnel on the ZyWALL/USG

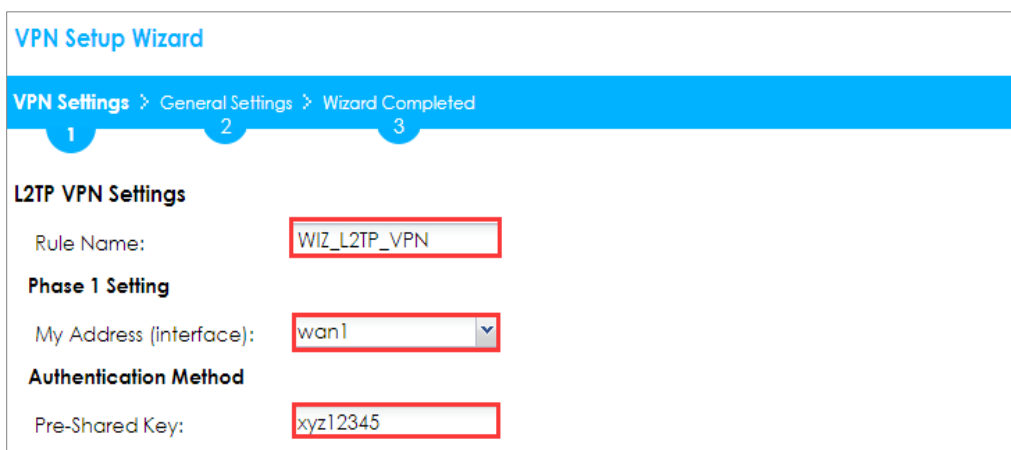

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings for L2TP VPN Settings** wizard to create a **L2TP VPN** rule that can be used with the Windows 10 clients. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome

Then, configure the **Rule Name** and set **My Address** to be the **wan1** interface which is connected to the Internet. Type a secure **Pre-Shared Key** (8-32 characters).

Quick Setup > VPN Setup Wizard > Welcome > VPN Settings

Assign the L2TP users' IP address range from 192.168.100.10 to 192.168.100.20 for use in the L2TP VPN tunnel and select **Allow L2TP traffic Through WAN** to allow traffic from L2TP clients to go to the Internet. Click **OK**.

Export a Certificate from ZyWALL/USG and Import it to Windows 10 Operating System

Go to ZyWALL/USG **CONFIGURATION > Object > Certificate**, select the certificate (default in this example) and click **Edit**.

CONFIGURATION > Object > Certificate > default

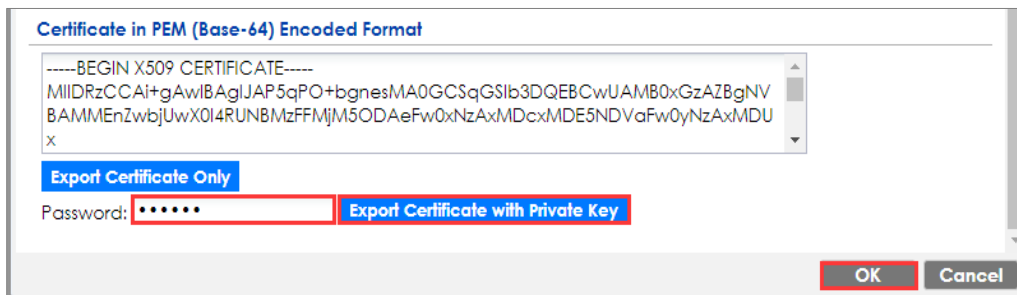

My Certificates Setting

+ Add Edit Remove Object References

#	Name	Type	Subject	Issuer	Valid From	Valid To
1	default	SELF	CN=vpn50_b8ECA31E2398	CN=vpn50_b8ECA31E2398	2017-01-07 10:19:45 GMT	2027-01-05 10:19:45 GMT

Export default certificate from ZyWALL/USG with Private Key (zyx123 in this example)

CONFIGURATION > Object > Certificate > default > Edit > Export Certificate with Private Key

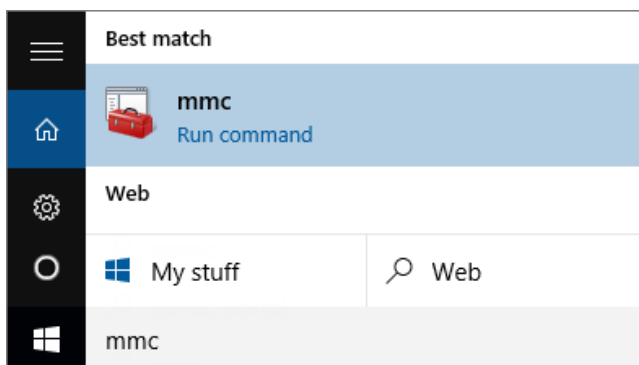

Save **default** certificate as *.p12 file to Windows 10 computer.

default.p12

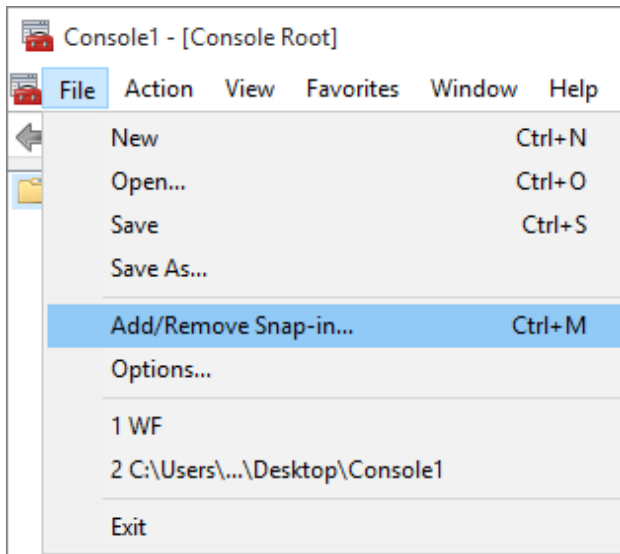

In Windows 10 Operating System, go to **Start Menu > Search Box**. Type **mmc** and press **Enter**.

Start Menu > Search Box > mmc

In the mmc console window, click **File > Add/Remove Snap-in...**

File > Add/Remove Snap-in...

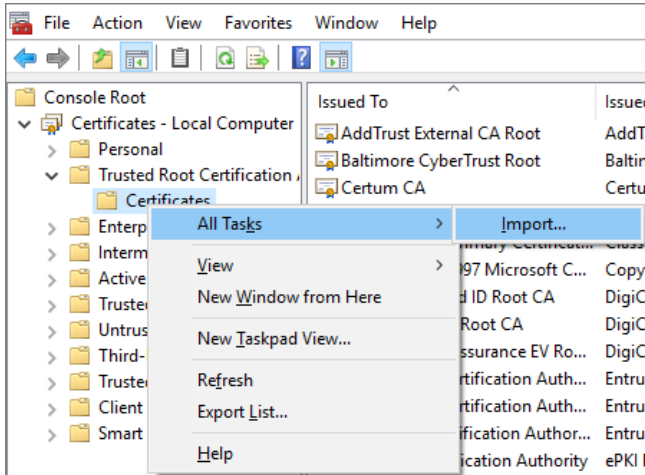

In the **Available snap-ins**, select **Certificates** click **Add**. Then, click **Finished**.

Press **OK** to close the Snap-ins window.

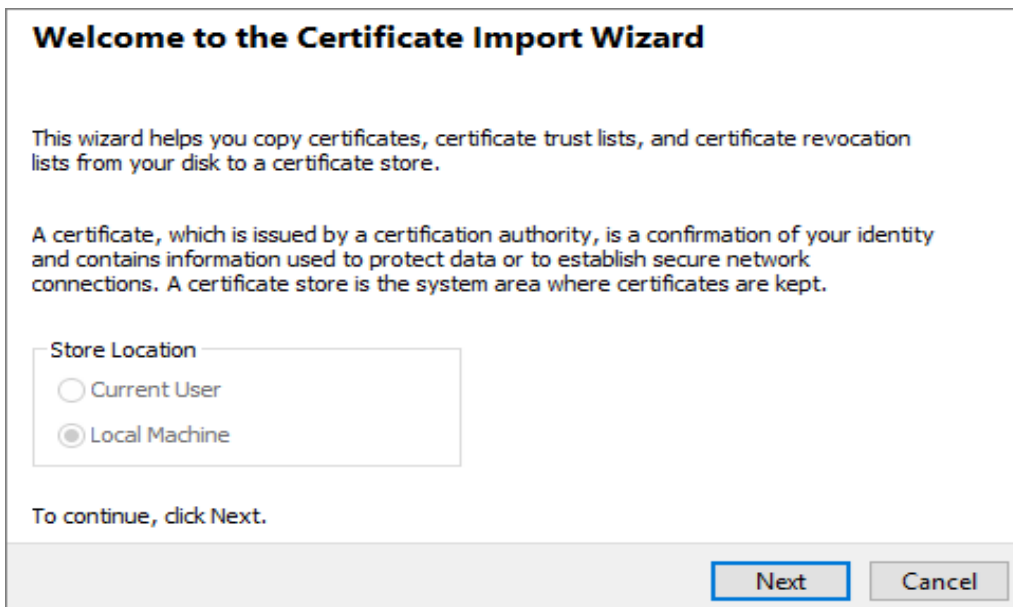

Available snap-ins > Certificates > Add

In the mmc console window, go to **Certificates (Local Computer) > Trusted Root Certification Authorities**, right click **Certificate > All Tasks > Import...**

Click **Next**.

Click **Browse...**, and locate the .p12 file you downloaded earlier. Then, click **Next**.

File to Import
Specify the file you want to import.

File name:

Note: More than one certificate can be stored in a single file in the following formats:
Personal Information Exchange- PKCS #12 (.PFX,.P12)
Cryptographic Message Syntax Standard- PKCS #7 Certificates (.P7B)
Microsoft Serialized Certificate Store (.SST)

Type **zyx123** in the **Password** field and click **Next**.

Private key protection
To maintain security, the private key was protected with a password.

Type the password for the private key.

Password:

 Display Password

Import options:

- Enable strong private key protection. You will be prompted every time the private key is used by an application if you enable this option.
- Mark this key as exportable. This will allow you to back up or transport your keys at a later time.
- Include all extended properties.

Select **Place all certificates in the following store** and then click **Browse** and find **Trusted Root Certification Authorities**. Click **Next**, then click **Finish**.

Certificate Store
Certificate stores are system areas where certificates are kept.

Windows can automatically select a certificate store, or you can specify a location for the certificate.

Automatically select the certificate store based on the type of certificate

Place all certificates in the following store

Certificate store:
Trusted Root Certification Authorities

 Note: Each ZyWALL/USG device has its own self-signed certificate by factory default. When you reset to default configuration file, the original self-signed certificate is erased, and a new self-signed certificate will be created when the ZyWALL/USG boots the next

Set Up the L2TP VPN Tunnel on the Windows 10

To configure L2TP VPN in Windows 10 operating system, go to **Start > Settings > Network & Internet > VPN > Add a VPN Connection** and configure as follows.

VPN Provider set to **Windows (built-in)**.

Configure **Connection name** for you to identify the VPN configuration.

Set **Server** name or address to be the ZyWALL/USG's WAN IP address (172.124.163.150 in this example).

Select **VPN type** to **Layer 2 Tunneling Protocol with IPsec (L2TP/IPsec)**.

Enter **User name** and **Password** which the same as **Allowed User** created in ZyWALL/USG (L2TP_Remote_Users/zyx168 in this example).

Ensure that the L2TP Address Pool does not conflict with any existing LAN1, LAN2, DMZ, or WLAN zones, even if they are not in use.

If you cannot access devices in the local network, verify that the devices in the local network set the USG's IP as their default gateway to utilize the L2TP tunnel.

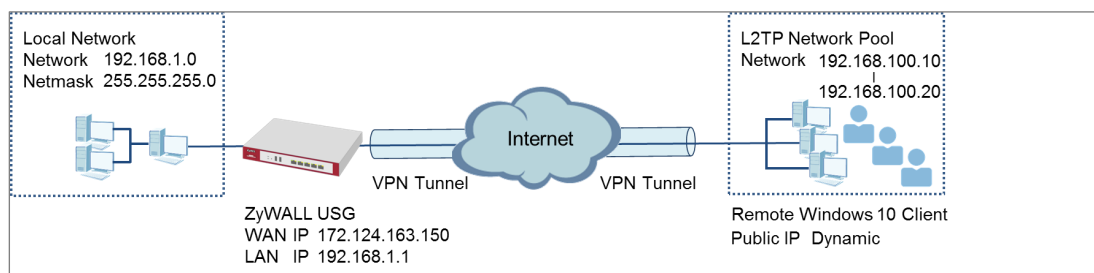

Make sure the ZyWALL/USG units' security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.

Verify that the Zone is set correctly in the VPN Connection rule. This should be set to IPSec_VPN Zone so that security policies are applied properly.

How to Import ZyWALL/USG Certificate for L2TP over IPsec in IOS mobile phone

This is an example of using the L2TP VPN and VPN client software included in Android mobile phone operating systems. When the VPN tunnel is configured, users can securely access the network behind the ZyWALL/USG and allow traffic from L2TP clients to go to the Internet from an iOS mobile phone.

ZyWALL/USG L2TP VPN with Remote iOS Mobile Phone Client Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: 4.25) and iOS (Version: 10.0.10240)

Set Up the L2TP VPN Tunnel on the ZyWALL/USG

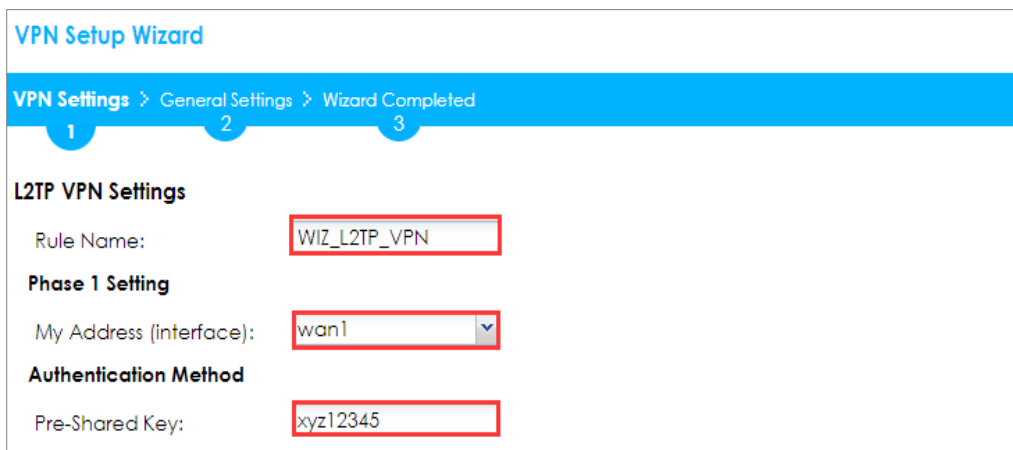

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings for L2TP VPN Settings** wizard to create a **L2TP VPN** rule that can be used with the iOS mobile phone clients. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome

Then, configure the **Rule Name** and set **My Address** to be the **wan1** interface which is connected to the Internet. Type a secure **Pre-Shared Key** (8-32 characters).

Quick Setup > VPN Setup Wizard > Welcome > VPN Settings

Assign the L2TP users' IP address range from 192.168.100.10 to 192.168.100.20 for use in the L2TP VPN tunnel and select **Allow L2TP traffic Through WAN** to allow traffic from L2TP clients to go to the Internet. Click **OK**.

4	2...	alert	L2TP Over IPSec	User L2TP_Remote_Users has been denied from L2TP service.(Incorrect Username or Password)	L2TP_LOG

2. If you see [info] or [error] log message such as below, please check ZyWALL/USG Phase 1 Settings. iOS users must use the same Pre-Shared Key as configured in ZyWALL/USG to establish the IKE SA.

Priority	Category	Message	Note
info	IKE	Send:[NOTIFY:INVALID_PAYLOAD_TYPE]	IKE_LOG
info	IKE	Invalid payload type in encrypted payload chain, possibly because of different pre-shared keys	IKE_LOG

3. If you see that Phase 1 IKE SA process has completed but still get [info] log message as below, please check ZyWALL/USG Phase 2 Settings. ZyWALL/USG unit must set correct **Local Policy** to establish the IKE SA.

Priority	Category	Message	Note
info	IKE	ISAKMP SA [WIZ_L2TP_VPN] is disconnected	IKE_LOG
info	IKE	Received delete notification	IKE_LOG
info	IKE	Recv:[HASH][DEL]	IKE_LOG
info	IKE	Send:[HASH][NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG
info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[ID] : Tunnel [WIZ_L2TP_VPN] Phase 2 Local policy mismatch	IKE_LOG

4. Ensure that the L2TP Address Pool does not conflict with any existing LAN1, LAN2, DMZ, or WLAN zones, even if they are not in use.
5. If you cannot access devices in the local network, verify that the devices in the local network set the USG's IP as their default gateway to utilize the L2TP tunnel.

6. Make sure the ZyWALL/USG units' security policies allow IPsec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.
7. Verify that the Zone is set correctly in the VPN Connection rule. This should be set to IPSec_VPN Zone so that security policies are applied properly.

How to Import ZyWALL/USG Certificate for L2TP over IPsec in Android mobile phone

This is an example of using the L2TP VPN and VPN client software included in Android mobile phone operating systems. When the VPN tunnel is configured, users can securely access the network behind the ZyWALL/USG and allow traffic from L2TP clients to go to the Internet from an Android mobile phone.

ZyWALL/USG L2TP VPN with Remote Android Mobile Phone Client Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: 4.25) and Android (Version: 10.0.10240)

Set Up the L2TP VPN Tunnel on the ZyWALL/USG

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings for L2TP VPN Settings** wizard to create a **L2TP VPN** rule that can be used with the Android mobile phone clients. Click **Next**.

IP Address Pool:	RANGE, 192.168.100.10 - 192.168.100.20

Go to **CONFIGURATION > VPN > VPN Gateway > WIZ_L2TP_VPN**, change **Authentication** method to be **Certificate** and select the certificate which ZyWALL/USG uses to identify itself to the Android mobile phone.

CONFIGURATION > VPN > VPN Gateway > WIZ_L2TP_VPN > Authentication > Certificate

Authentication

Pre-Shared Key

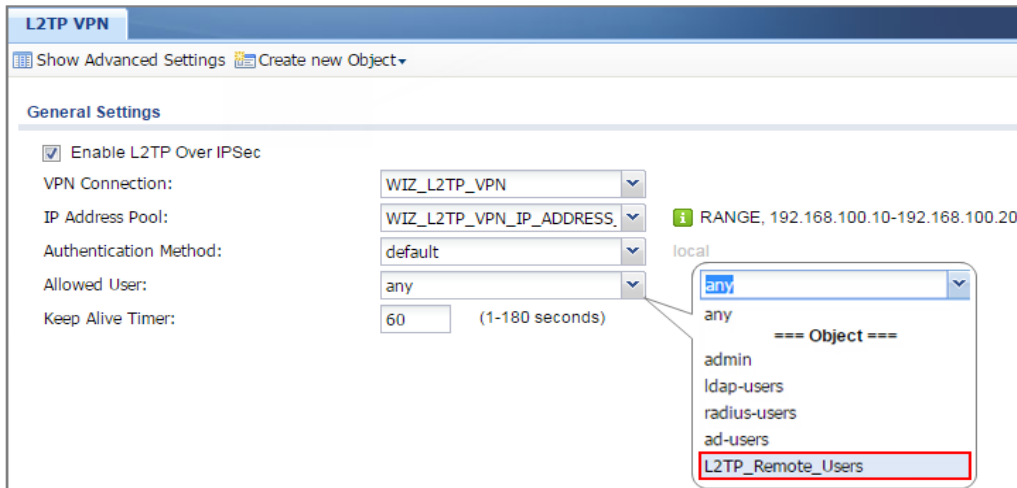

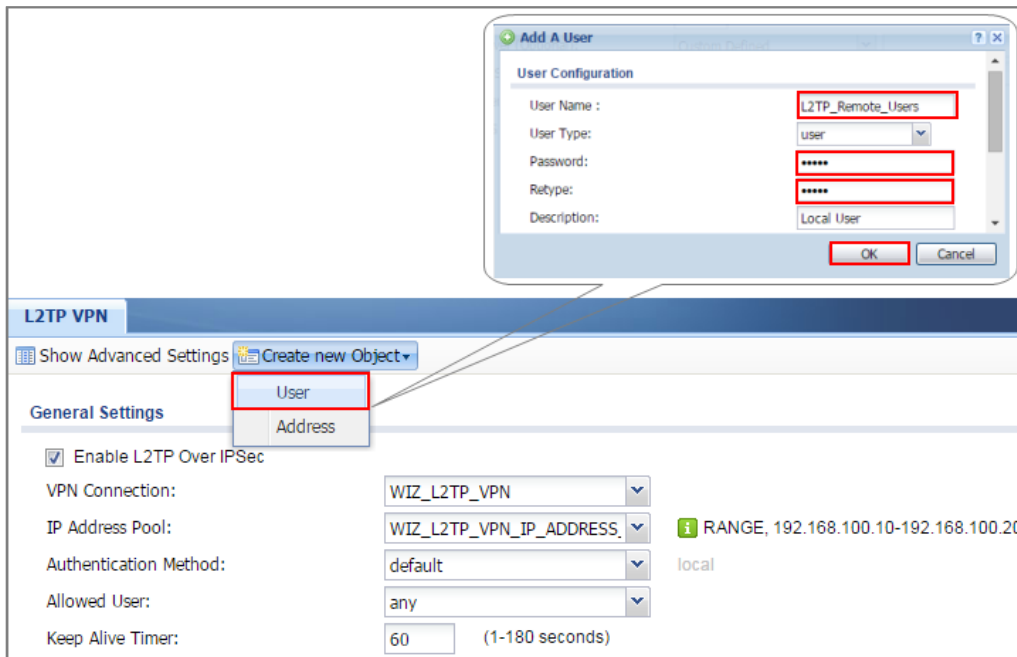

unmasked

Certificate default (See [My Certificates](#))

User Based PSK L2TP_Remote_Users i

Go to **CONFIGURATION > VPN > L2TP VPN > Create new Object > User** to add **User Name** and **Password** (4-24 characters). Then, set **Allowed User** to the newly created object (L2TP_Remote_Users/zyx168 in this example).

CONFIGURATION > VPN > L2TP VPN > Create new Object > User

Export a Certificate from ZyWALL/USG and Import it to Android Mobile Phone

Go to ZyWALL/USG **CONFIGURATION > Object > Certificate**, select the certificate (**default** in this example) and click **Edit**.

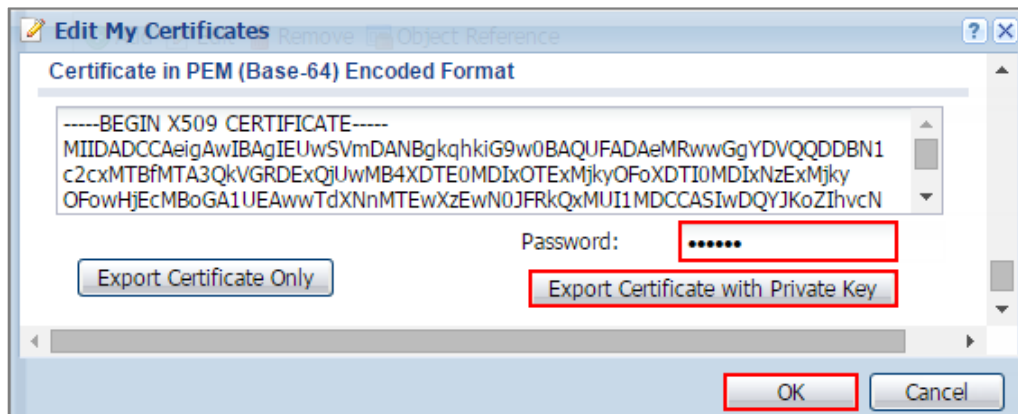

CONFIGURATION > Object > Certificate > default

#	Name	Type	Subject	Issuer	Valid From	Valid To
1	default	SELF	CN=usg110_107BEFD11B50	CN=usg110_107BEFD11B50	2014-02-19 11:29:28 GMT	2024-02-17 11:29:28 GMT

Export default certificate from ZyWALL/USG with Private Key (zyx123 in this example)

CONFIGURATION > Object > Certificate > default > Edit > Export Certificate with Private Key

Save **default** certificate as ***.p12** file to Android mobile phone computer.

default.p12

Set Up the L2TP VPN Tunnel on the Android Mobile Device

- 1** To configure L2TP VPN in Android, go to Start > Settings > Network & Internet > VPN > Add a VPN Connection and configure as follows.
- 2** VPN Provider set to Windows (built-in).
- 3** Configure **Connection name** for you to identify the VPN configuration.
- 4** Set **Server** name or address to be the ZyWALL/USG's WAN IP address (172.124.163.150 in this example).
- 5** Select VPN type to Layer 2 Tunneling Protocol with IPsec (L2TP/IPsec).
- 6** Enter **User name** and **Password** which the same as **Allowed User** created in ZyWALL/USG (L2TP_Remote_Users/zyx168 in this example).

Add a VPN connection

Go to **Control Panel > Network and Internet > Network Connections** and right click **Properties**. Continue to **Security > Advanced settings** and select **Use Certificate for authentication**.

Go to **Network & Internet Settings** window, click **Connect**.

Test the L2TP over IPSec VPN Tunnel

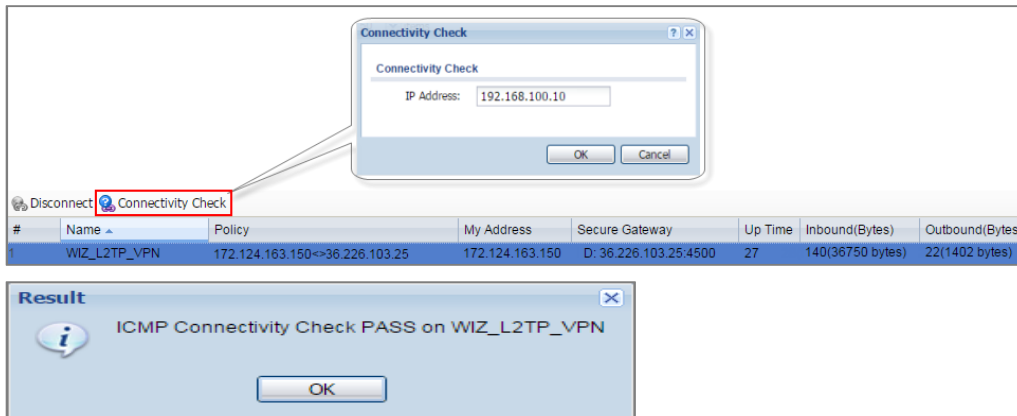

Go to ZyWALL/USG **CONFIGURATION > VPN > IPSec VPN > VPN Connection**, the **Status** connect icon is lit when the interface is connected.

CONFIGURATION > VPN > IPSec VPN > VPN Connection

#	Status	Name	VPN Gateway	Policy
1		WIZ_L2TP_VPN	WIZ_L2TP_VPN	WIZ_L2TP_VPN_LOCAL/

Go to ZyWALL/USG **MONITOR > VPN Monitor > IPSec** and verify the tunnel **Up Time** and the **Inbound(Bytes)/Outbound(Bytes)** traffic. Click **Connectivity Check** to verify the result of ICMP Connectivity.

Hub_HQ > MONITOR > VPN Monitor > IPSec > WIZ_L2TP_VPN

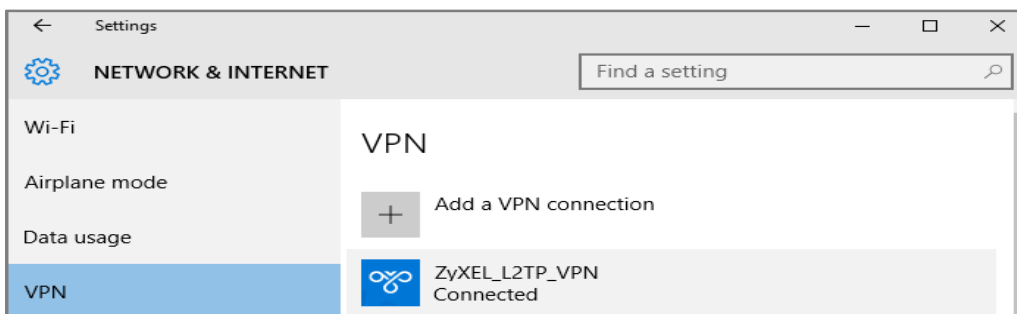

Go to ZyWALL/USG **MONITOR > VPN Monitor > L2TP over IPSec** and verify the **Current L2TP Session**.

MONITOR > VPN Monitor > L2TP over IPSec > L2TP_Remote_Users

Go to Android **Start > Settings > Network & Internet > VPN** and show **Connected** status.

Menu > Settings > VPN > ZyXEL_L2TP

What Could Go Wrong?

- If you see [alert] log message such as below, please check ZyWALL/USG L2TP Allowed User or User/Group Settings. Android users must use the same Username and Password as configured in ZyWALL/USG to establish the L2TP VPN.

Priority	Category	Message	Note
alert	L2TP Over IPSec	User L2TP_Remote_Users has been denied from L2TP service.(Incorrect Username or Password)	L2TP_LOG

- If you see [info] or [error] log message such as below, please check ZyWALL/USG Phase 1 Settings. Android users must use the same Pre-Shared Key as configured in ZyWALL/USG to establish the IKE SA.

Priority	Category	Message	Note
error	IPSec	SPI: 0x0 (0) SEQ: 0x0 (0) No rule found. Drooping TCP packet	IPSec
info	IKE	Send:[NOTIFY:INVALID_PAYLOAD_TYPE]	IKE_LOG
info	IKE	Invalid payload type in encrypted payload chain, possibly because of different pre-shared keys	IKE_LOG
Priority	Category	Message	Note
info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[ID] : Tunnel [WIZ_L2TP_VPN] Phase 1 Remote ID mismatch	IKE_LOG

- If you see that Phase 1 IKE SA process has completed but still get [info] log message as below, please check ZyWALL/USG Phase 2 Settings. ZyWALL/USG unit must set correct **Local Policy** to establish the IKE SA.

Priority	Category	Message	Note
info	IKE	[ID] : Tunnel [WIZ_L2TP_VPN] Phase 2 Local policy mismatch	IKE_LOG
Priority	Category	Message	Note
info	IKE	Send:[HASH][NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG
info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[SA] : Tunnel [WIZ_L2TP_VPN] Phase 2 proposal mismatch	IKE_LOG

- Ensure that the L2TP Address Pool does not conflict with any existing LAN1, LAN2, DMZ, or WLAN zones, even if they are not in use.

- 11** If you cannot access devices in the local network, verify that the devices in the local network set the USG's IP as their default gateway to utilize the L2TP tunnel.
- 12** Make sure the ZyWALL/USG units' security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.
- 13** Verify that the Zone is set correctly in the VPN Connection rule. This should be set to IPSec_VPN Zone so that security policies are applied properly.

How to Configure the L2TP VPN with Apple MAC OS X 10.11 Operating System

This is an example of using the L2TP VPN and VPN client software included in Apple MAC OS X 10.11 El Capitan operating systems. When the VPN tunnel is configured, users can securely access the network behind the ZyWALL/USG and allow traffic from L2TP clients to go to the Internet from an Apple computer.

ZyWALL/USG L2TP VPN with Apple MAC OS X 10.11 El Capitan

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25) and Apple MAC (Version: OS X10.11 El Capitan).

Set Up the L2TP VPN Tunnel on the ZyWALL/USG

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings for L2TP VPN Settings** wizard to create a **L2TP VPN** rule that can be used with the MAC OS X clients. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome

Then, configure the **Rule Name** and set **My Address** to be the **wan1** interface which is connected to the Internet. Type a secure **Pre-Shared Key** (8-32 characters).

Quick Setup > VPN Setup Wizard > Welcome > VPN Settings

Configure the L2TP users' IP address range from 192.168.30.10 to 192.168.30.20 for use in the L2TP VPN tunnel and check **Allow L2TP traffic Through WAN**. Click **OK**.

Set Up the L2TP VPN Tunnel on the Apple MAC OS X 10.11 El Capitan Operating System

To configure L2TP VPN in OS X 10.11 operation system, go to **System Preferences...** > **Network**, click the "+" button at the bottom left of the connections to add a new connection and configure as follows.

Set the **Interface** to be **VPN**, select **VPN Type** to be **L2TP over IPSec**.

Configure **Service Name** for you to identify the VPN configuration. Click **Create**.

Select the interface and enter a name for the new service.

Interface: VPN

VPN Type: L2TP over IPSec

Service Name: ZyXEL_L2TP_VPN

Cancel Create

Configure **Server Address** to be the ZyWALL/USG's WAN IP address (172.124.163.150 in this example). Enter **Account Name** which should be the same as **Allowed User** created in ZyWALL/USG (L2TP_Remote_Users in this example). Then, click **Authentication Settings...**

Configuration: Default

Server Address: 172.124.163.150

Account Name: L2TP_Remote_Users

Authentication Settings...

Connect

In the **User Authentication** section, enter **Password** which should be the same as **Allowed User** created in ZyWALL/USG (zyx123 in this example).

In the **Machine Authentication** section, enter **Shared Secret** to be the pre-shared key of the IPSec VPN gateway the ZyWALL/USG uses for L2TP VPN over IPSec (zyx12345 in this example). Click **OK**.

User Authentication:

- Password:
- RSA SecurID
- Certificate
- Kerberos
- CryptoCard

Machine Authentication:

- Shared Secret:
- Certificate

Group Name:
(Optional)

Go back to **Configuration** and click **Advanced....** Select **Send all traffic over VPN connection** to allow the L2TP/IPSec VPN traffic between ZyWALL/USG and MAC OS X system.

Configuration:

Server Address:

Account Name:

Show VPN status in menu bar

Session Options:

- Disconnect when switching user accounts
- Disconnect when user logs out
- Send all traffic over VPN connection

Advanced Options:

- Use verbose logging

Go back to **Configuration** and click **Connect**.

Configuration: Default

Server Address: 172.124.163.150

Account Name: L2TP_Remote_Users

Authentication Settings...

Connect

Test the L2TP over IPsec VPN Tunnel

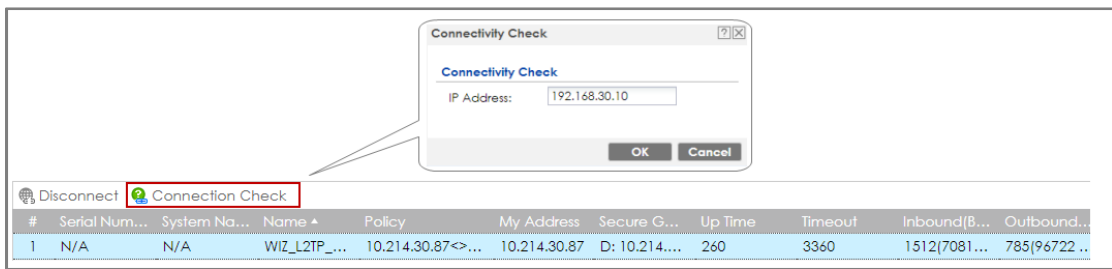

Go to ZyWALL/USG **CONFIGURATION** > **VPN** > **IPsec VPN** > **VPN Connection**, the **Status** connect icon is lit when the interface is connected.

CONFIGURATION > VPN > IPsec VPN > VPN Connection

IPv4 Configuration

Go to ZyWALL/USG **MONITOR** > **VPN Monitor** > **IPsec** and verify the tunnel **Up Time** and the **Inbound(Bytes)/Outbound(Bytes)** traffic. Click **Connectivity Check** to verify the result of ICMP Connectivity.

MONITOR > VPN Monitor > IPsec > WIZ_L2TP_VPN

功能有問題無法截圖, connectivity check fail

Go to ZyWALL/USG **MONITOR > VPN Monitor > L2TP over IPSec** and verify the **Current L2TP Session**.

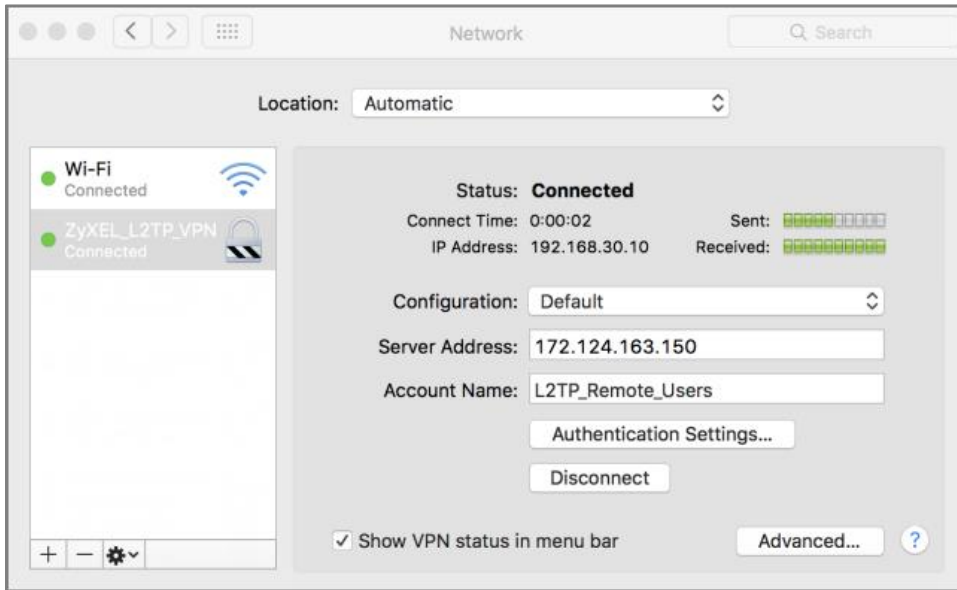

MONITOR > VPN Monitor > L2TP over IPSec > L2TP_Remote_Users

The screenshot shows the 'Current L2TP Session' table with the following data:

#	User Name	Hostname	Assigned IP	Public IP
1	L2TP_Remote_Users	Apple_MAC_OS_X	192.168.30.10	36.226.103.25

Go to MAC OS X **System Preferences... > Network** and show **Connected** status, **Connect Time** and assigned **IP Address**.

System Preferences... > Network

What Could Go Wrong?

If you see [alert] log message such as below, please check ZyWALL/USG L2TP **Allowed User** or **User/Group Settings**. Apple MAC OS X El Capitan operating system users must use the same **Username** and **Password** as configured in ZyWALL/USG to establish the L2TP VPN.

#	Time	Priority	Category	Message	Note
6	2017-06-...	alert	L2TP Over IPS...	User L2TP_Remote_Users has been denied from L2TP service.(Incorrect Username or Password)	L2TP_LOG

If you see [info] or [error] log message such as below, please check ZyWALL/USG Phase 1 Settings. Apple MAC OS X El Capitan operating system users must use the same **Pre-Shared Key** as configured in ZyWALL/USG to establish the IKE SA.

Priority	Category	Message	Note
info	IKE	Send:[NOTIFY:INVALID_PAYLOAD_TYPE]	IKE_LOG
info	IKE	Invalid payload type in encrypted payload chain, possibly because of different pre-shared keys	IKE_LOG
Priority	Category	Message	Note
info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[ID] : Tunnel [WIZ_L2TP_VPN] Phase 1 Peer ID mismatch	IKE_LOG

If you see that Phase 1 IKE SA process has completed but still get [info] log message as below, please check ZyWALL/USG Phase 2 Settings. ZyWALL/USG unit must set correct **Local Policy** to establish the IKE SA.

Priority	Category	Message	Note
info	IKE	Send:[HASH][NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG
info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[ID] : Tunnel [WIZ_L2TP_VPN] Phase 2 Local policy mismatch	IKE_LOG
info	IKE	Recv:[HASH][SA][NONCE][ID][ID]	IKE_LOG
info	IKE	Phase 1 IKE SA process done	IKE_LOG

Priority	Category	Message	Note
info	IKE	Send:[HASH][NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG
info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[SA] : Tunnel [WIZ_L2TP_VPN] Phase 2 proposal mismatch	IKE_LOG
info	IKE	Recv:[HASH][SA][NONCE][ID][ID]	IKE_LOG
info	IKE	Phase 1 IKE SA process done	IKE_LOG

Ensure that the L2TP Address Pool does not conflict with any existing LAN1, LAN2, DMZ, or WLAN zones, even if they are not in use.

If you cannot access devices in the local network, verify that the devices in the local network set the USG's IP as their default gateway to utilize the L2TP tunnel.

Make sure the ZyWALL/USG units' security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.

Verify that the Zone is set correctly in the Zone object. This should be set to IPSec_VPN Zone so that security policies are applied properly.

How to configure if I want user can only see SSL VPN Login button in web portal login page

This example shows how to restrict portal access for SSL VPN clients. The example instructs how to allow end users to only see the SSL VPN Login button in the web portal login screen and the administrator can only manage the device from LAN.

ZyWALL/USG only see SSL VPN Login button in web portal login page

 Note:

All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG60 (Firmware Version: ZLD 4.25).

Set Up the DNS Service

In this scenario, you need to have a DNS host to fulfill the requirement. In this example, go to <https://www.noip.com/> to register an account and create a DNS host. The following mapping IP address is the public IP of the ZyWALL/USG's WAN IP address.

Set Up the ZyWALL/USG SSL VPN Setting

In the ZyWALL/USG, go to **CONFIGURATION > VPN > SSL VPN > Global Setting > SSL VPN Login Domain Name** and type in the DNS domain name.

CONFIGURATION > VPN > SSL VPN > Global Setting > SSL VPN Login Domain Name

Global Settings	
Network Extension Local IP:	<input type="text" value="192.168.200.1"/>
SSL VPN Login Domain Name	
SSL VPN Login Domain Name 1	<input type="text" value="zyxeltestssl.ddns.net"/> (Optional)
SSL VPN Login Domain Name 2	<input type="text"/> (Optional)
Message	
Login Message:	<input type="text" value="Welcome to SSL VPN"/>
Logout Message:	<input type="text" value="Goodbye to SSL VPN"/>

Use SSL VPN, you need to allow users to access the **HTTPS** service. Go to **CONFIGURATION > Security Policy > Policy Control**. Make sure the security policy allows **HTTPS** traffic from the **WAN** interface to the **ZyWALL** (the example shows the default settings).

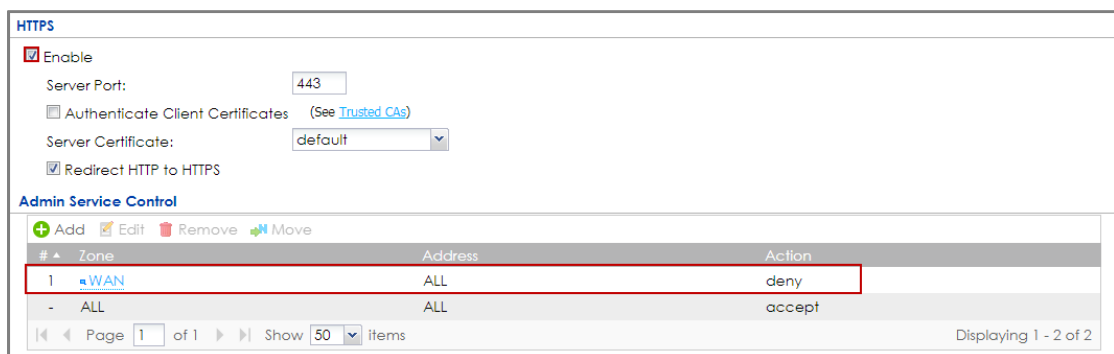

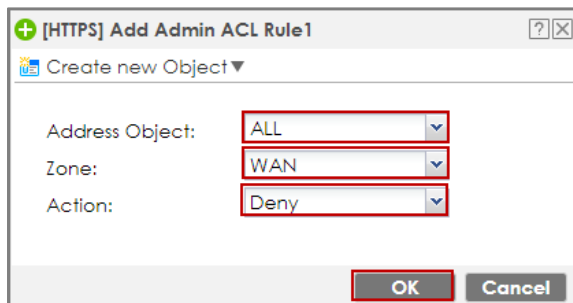

CONFIGURATION > Security Policy > Policy Control

Set Up the ZyWALL/USG System Setting

Go to **CONFIGURATION > System > WWW > Admin Service Control > Add Admin ACL Rule 1**. Set the address access action as **Deny** for **ALL** address in **WAN**.

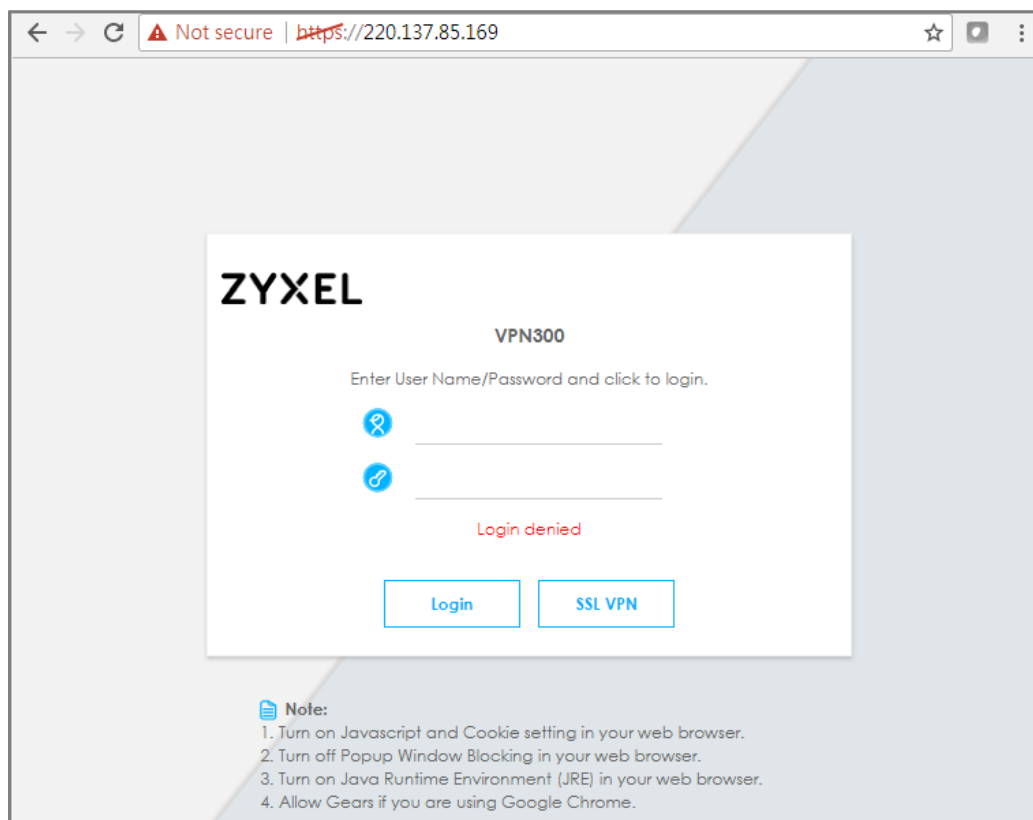

CONFIGURATION > System > WWW > Admin Service Control > Add Admin ACL Rule 1

Test the SSL VPN

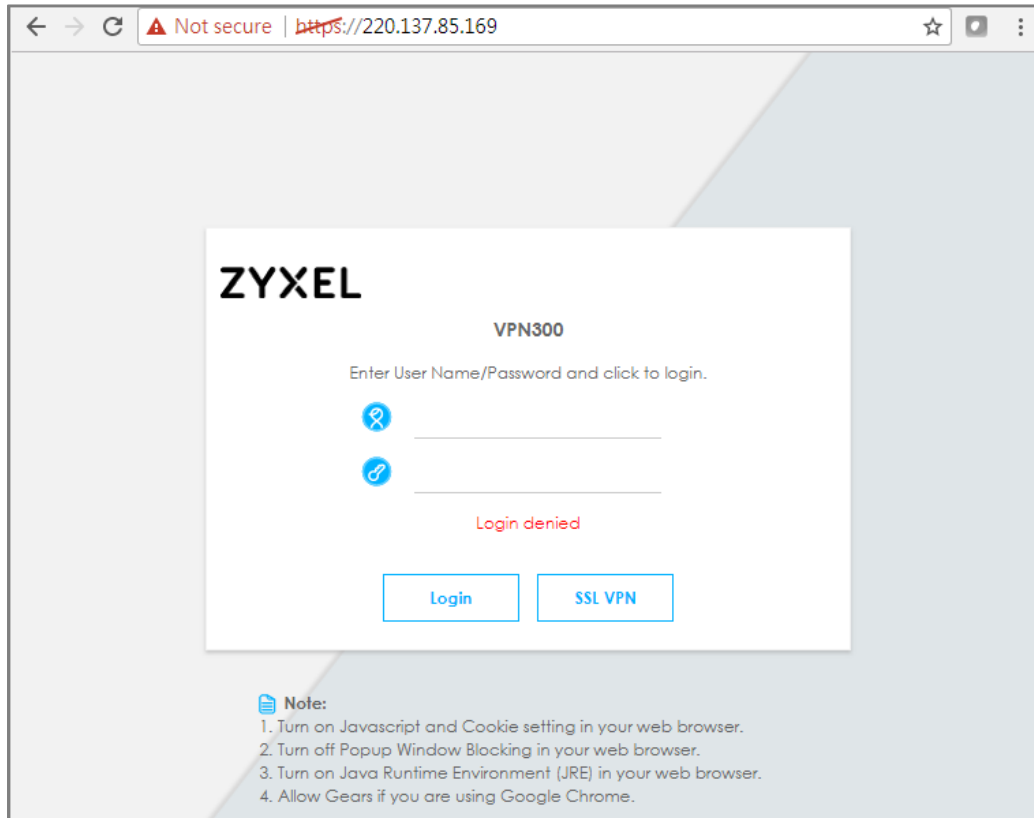

Type in the URL (<https://sslvpnzyxeltest.ddns.net>) and you will only see the **SSL VPN Login** button in the web portal screen.

Type in the URL (<https://sslvpnzyxeltest.ddns.net>)

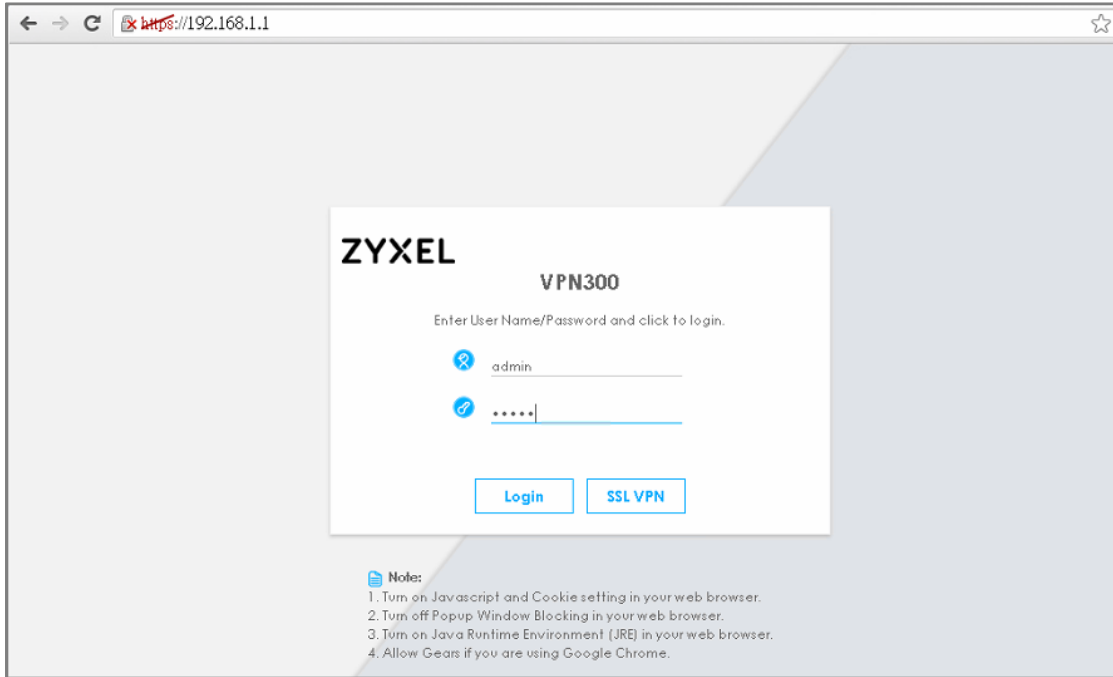

Login to the device via the WAN interface with the administrator's user name and password. The screen will show **Login denied**.

Login to the device via the WAN interface

Login to the device via the LAN interface with the administrator's user name and password. The management portal will be displayed.

Login to the device via the LAN interface

Go to **MONITOR > Log**. You can see that the admin login has been denied access from the WAN interface but it is allowed from the LAN interface.

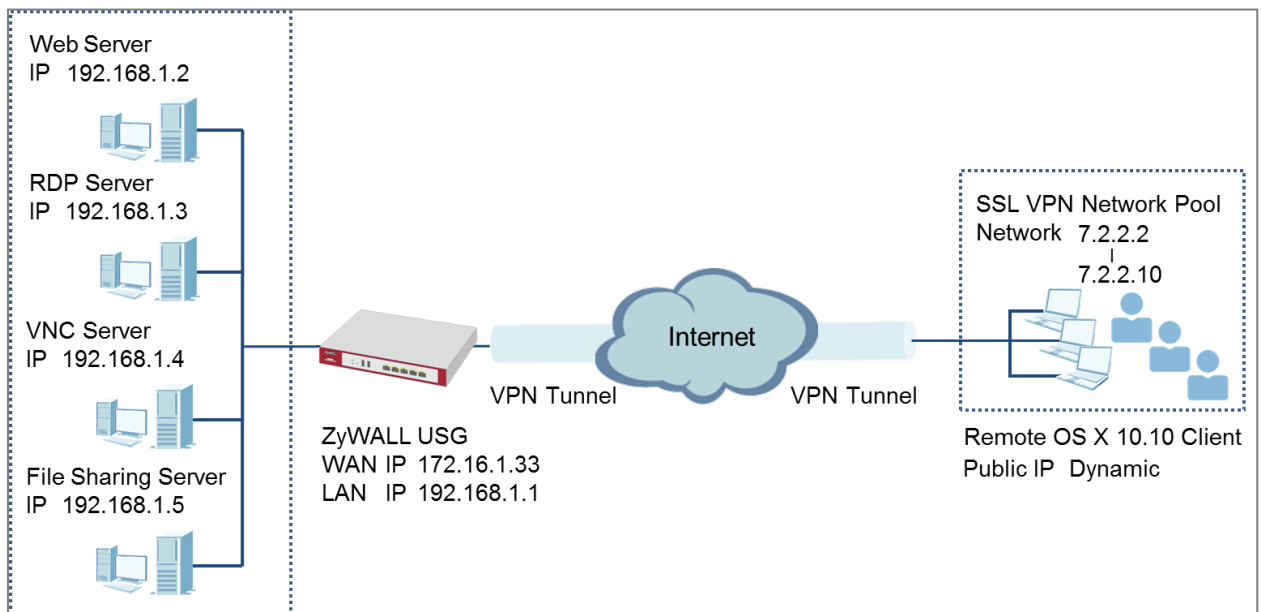

MONITOR > Log

How to Deploy SSL VPN with Apple Mac OS X 10.10 Operating System

This is an example of using the ZyWALL/USG SSL VPN client software in Apple MAC OS X 10.10 Yosemite operating systems for secure connections to the network behind the ZyWALL/USG. When the VPN tunnel is configured, users can securely access the network from a Mac OS X 10.11 Yosemite computer.

ZyWALL/USG SSL VPN with Apple MAC OS X 10.10 Yosemite

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG110 (Firmware Version: ZLD 4.25) and Apple MAC (Version: OS X10.10 Yosemite).

Set Up the SSL VPN Tunnel on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > VPN > SSL VPN > Access Privilege** to add an **Access Policy**. Configure a **Name** for you to identify the SSL VPN configuration.

CONFIGURATION > VPN > SSL VPN > Access Privilege > Access Policy > Configuration

Configuration

Enable Policy

Name:

Zone: ⓘ

Description: (Optional)

Go to **Create new Object > User** to add **User Name** (SSL_VPN_1_Users in this example) and **Password** (4-24 characters, zyx168 in this example), click **OK**.

CONFIGURATION > VPN > SSL VPN > Access Privilege > Access Policy > Create new Object > User

Add Access Policy

Create new Object

User

Application

Address

Name:

Zone: ⓘ

Description: (Optional)

Add A User

User Configuration

User Name :

User Type:

Password:

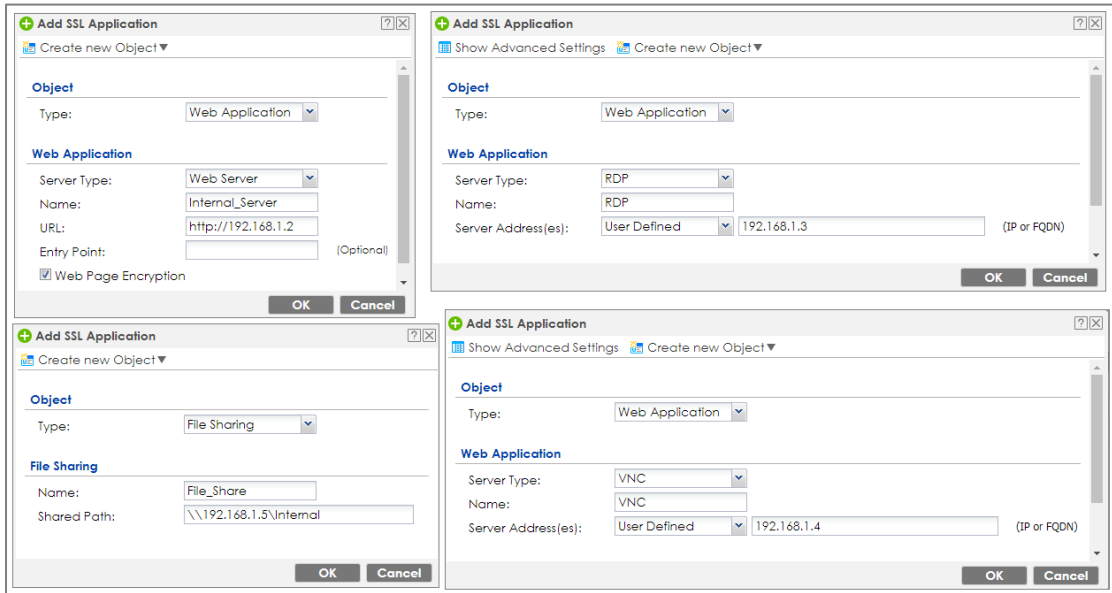

Retype:

Description:

OK Cancel

Go to **Create new Object > Application** to add servers you allow **SSL_VPN_1_Users** to access, click **OK**.

CONFIGURATION > VPN > SSL VPN > Access Privilege > Access Policy > Create new Object > Application

Go to **Create new Object > Address** to add the IP address pool for **SSL_VPN_1_Users**.

CONFIGURATION > VPN > SSL VPN > Access Privilege > Access Policy > Create new Object > Address

Then, move the just created address object to **Selected User/Group Objects**.

Similarly, in **SSL Application List (Optional)** move the servers you want available to SSL users to **Selected Appellation Objects**.

CONFIGURATION > VPN > SSL VPN > Access Privilege > Access Policy > User/Group & SSL Application

The screenshot shows a configuration window titled "User/Group". It is divided into two main sections:

- User/Group Section:**
 - Selectable User/Group Objects:** A list containing "billing-users", "ua-users", "trial-users", "L2TP_Remote_Users", and "SSL_VPN_1_Users". The "SSL_VPN_1_Users" entry is highlighted with a red box.
 - Selected User/Group Objects:** An empty list box.
 - Two blue arrow buttons (right-pointing and left-pointing) are positioned between the two lists.
- SSL Application List (Optional) Section:**
 - Selectable Application Objects:** A list containing "Internal_Server", "RDP", "VNC", and "File_Share". The "Internal_Server" entry is highlighted with a red box.
 - Selected Application Objects:** An empty list box.
 - Two blue arrow buttons (right-pointing and left-pointing) are positioned between the two lists.

Scroll down to **Network Extension (Optional)** to select **Enable Network Extension** to allow SSL VPN users to access the resources behind the ZyWALL/USG local network.

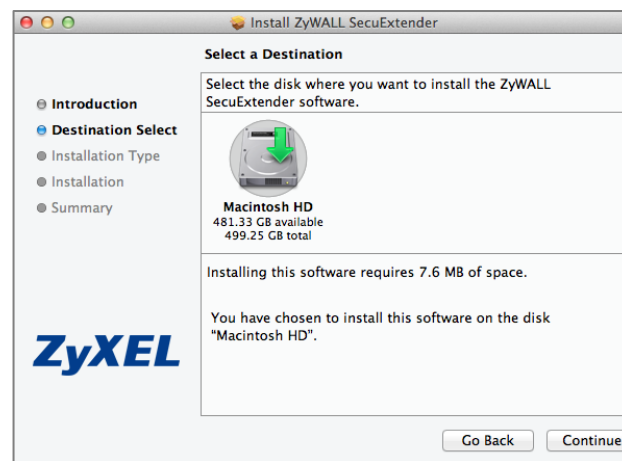

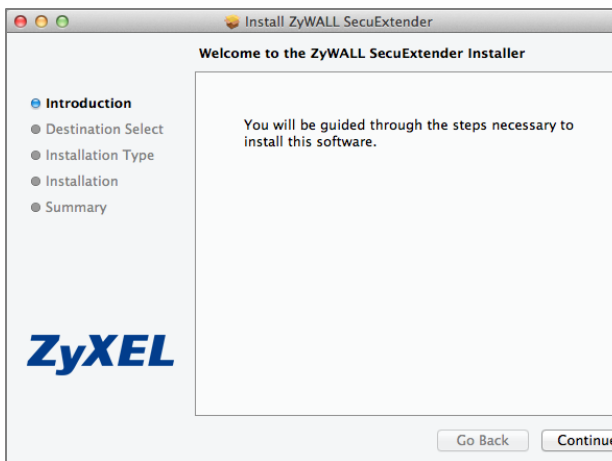

Select network(s) name in the **Selectable Address Objects** list and click the right arrow button to add to the **Selected Address Objects** list. You can select more than one network.

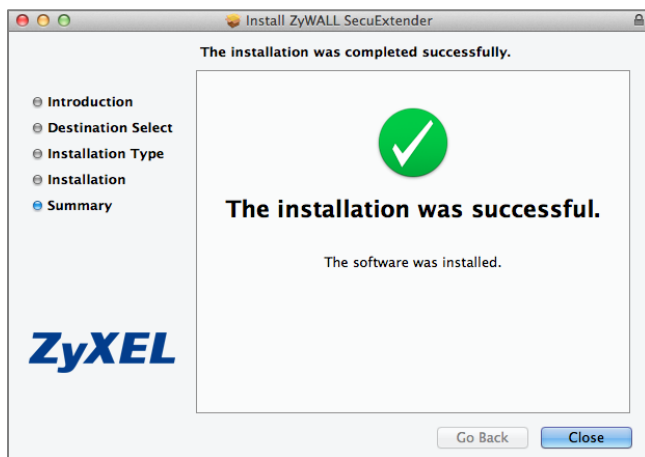

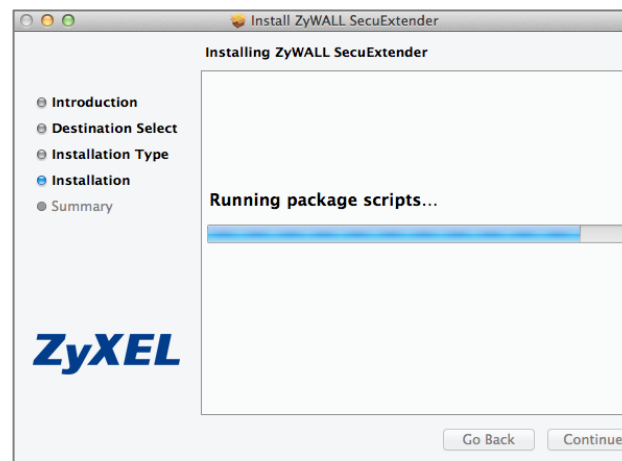

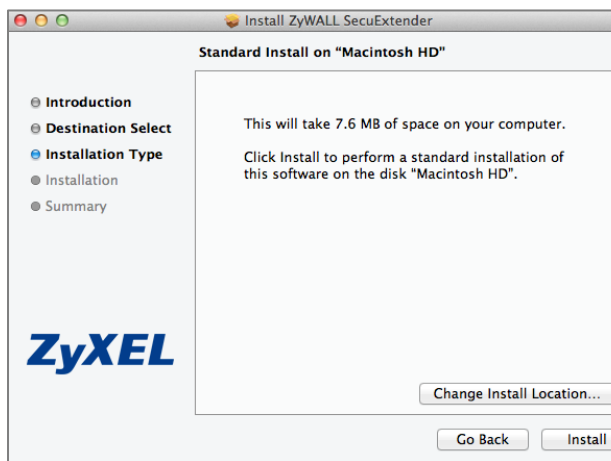

CONFIGURATION > VPN > SSL VPN > Access Privilege > Access Policy > Network Extension (Optional)

Set Up the SSL VPN Tunnel on the Apple MAC OS X 10.10 Operating System

Download SSL VPN Client software: **ZyWALL SecuExtender** for MAC from the ZyXEL Global Website and double-click on the downloaded file to install it.

Go to **ZyWALL SecuExtender > Preferences**, click the "+" button at the bottom left to add a new SSL VPN connection.

Configure the **Connection Name** for you to identify the SSL VPN configuration.
Then, set the **Remote Server Address** to be the WAN IP of ZyWALL/USG (172.16.1.33
in this example). Click **Save**.

Here are two methods to initiate SSL VPN connections:

From ZyWALL SecuExtender

From a Web Browser

From ZyWALL SecuExtender

Go to **ZyWALL SecuExtender > Connect > SSL_VPN**, to display the username and password dialog box. Set **Username** and **Password** to be the same as your ZyWALL/USG SSL VPN **Selected User/Group** name and password (SSL_VPN_1_Users/zyx168 in this example).

From a Web Browser

Type ZyWALL/USG's WAN IP into the browser, to display the login screen. Enter **User Name** and **Password** to be the same as your ZyWALL/USG SSL VPN **Selected User/Group** name and password (SSL_VPN_1_Users/zyx168 in this example). Click **SSL VPN**.

Test the SSL VPN Tunnel

Go to ZyWALL/USG **MONITOR** > **VPN Monitor** > **SSL** and verify the tunnel **Login Address**, **Connected Time** and the **Inbound(Bytes)/Outbound(Bytes)** traffic.

MONITOR > **VPN Monitor** > **SSL** > **SSL_VPN_1_Users**

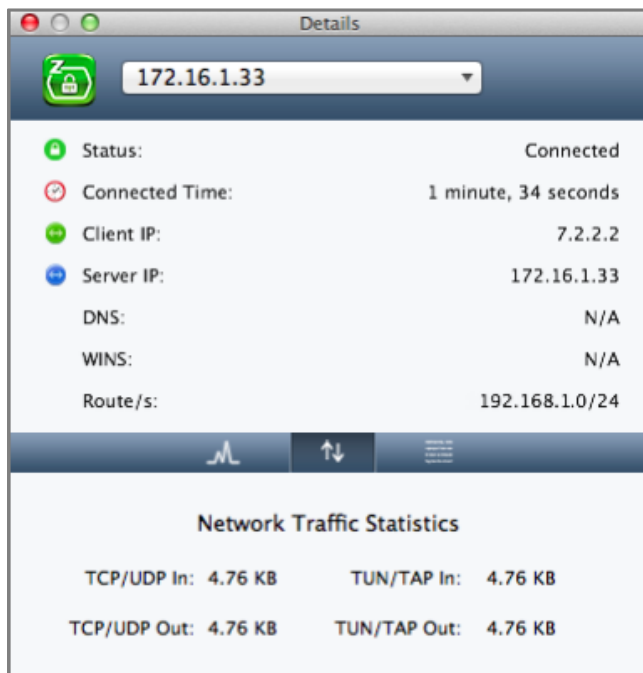

Current SSL VPN Connection						
#	User	Access	Login Address	Connected Time	Inbound(Bytes)	Outbound(Bytes)
1	SSL_VPN_1_Users	Network-Extension	10.214.30.104	00:01:39	9390	503

Go to **ZyWALL SecuExtender** > **Details** and check **Traffic Graph**, **Network Traffic Statics** and **Log Details**.

ZyWALL SecuExtender > Details > Traffic Graph

ZyWALL SecuExtender > Details > Network Traffic Statics

ZyWALL SecuExtender > Details > Log Details

What Could Go Wrong?

If you see [notice] or [alert] log message such as below, please check ZyWALL/USG SSL **Selected User/Group Objects** settings. MAC OS X 10.10 Yosemite users must use the same **Username** and **Password** as configured in ZyWALL/USG to establish the SSL VPN tunnel.

Priority	Category	Message	Note
notice	SSL VPN	Failed login attempt to SSLVPN from http/https (incorrect password or inexistent username)	Account: SSL_VPN_1...
alert	User	Failed login attempt to Device from http/https (incorrect password or inexistent username)	Account: SSL_VPN_1...

If you uploaded a logo to show in the SSL VPN user screens but it does not display properly, check that the logo graphic is in GIF, JPG, or PNG format. The graphic should use a resolution of 103 x 29 pixels to avoid distortion when displayed. The ZyWALL/USG automatically resizes a graphic of a different resolution to 103 x 29 pixels. The file size must be 100 kilobytes or less. Transparent background is recommended.

If users can log into the SSL VPN but cannot see some of the resource links check the SSL application object's configuration.

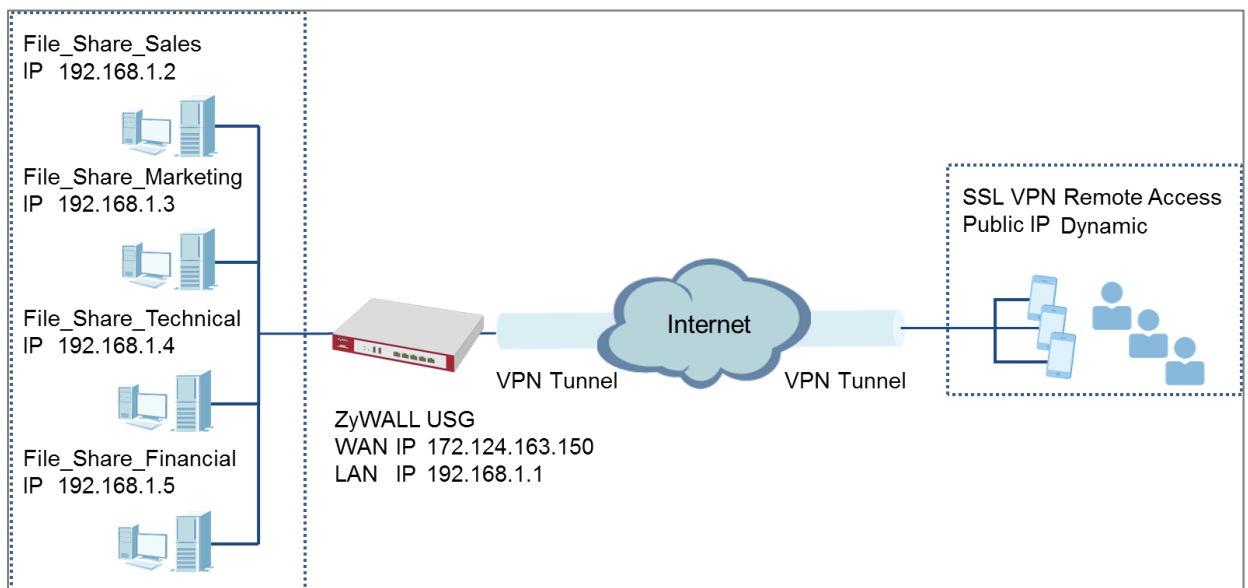

If the ZyWALL/USG redirects the user to the user aware screen, check whether the user account is included in an SSL VPN access policy or not.

Changing the HTTP/HTTPS configuration disconnects SSL VPN network extension sessions. Users need to re-connect if this happens.

How To Configure SSL VPN for Remote Access Mobile Devices

This is an example of using the ZyWALL/USG SSL VPN for remote access mobile devices to securely connect to the File Sharing Server behind the ZyWALL/USG.

ZyWALL/USG SSL VPN for Secure External Access to Network Resources

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG1900 (Firmware Version: ZLD 4.25).

Set Up the SSL VPN Tunnel on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > VPN > SSL VPN > Access Privilege** to add an **Access Policy**. Configure a **Name** for you to identify the SSL VPN configuration.

CONFIGURATION > VPN > SSL VPN > Access Privilege > Access Policy > Configuration

Configuration

Enable Policy

Name:

Zone: (Optional)

Description: (Optional)

Go to **Create new Object > User** to add **User Name** (SSL_VPN_1_Users in this example) and **Password** (4-24 characters, zyx168 in this example), click **OK**.

CONFIGURATION > VPN > SSL VPN > Access Privilege > Access Policy > Create new Object > User

+ Add Access Policy

Create new Object ▾

- User
- Application
- Address

Name:

Zone: ⓘ

Description: (Optional)

+ Add A User

User Configuration

User Name :

User Type: ▾

Password:

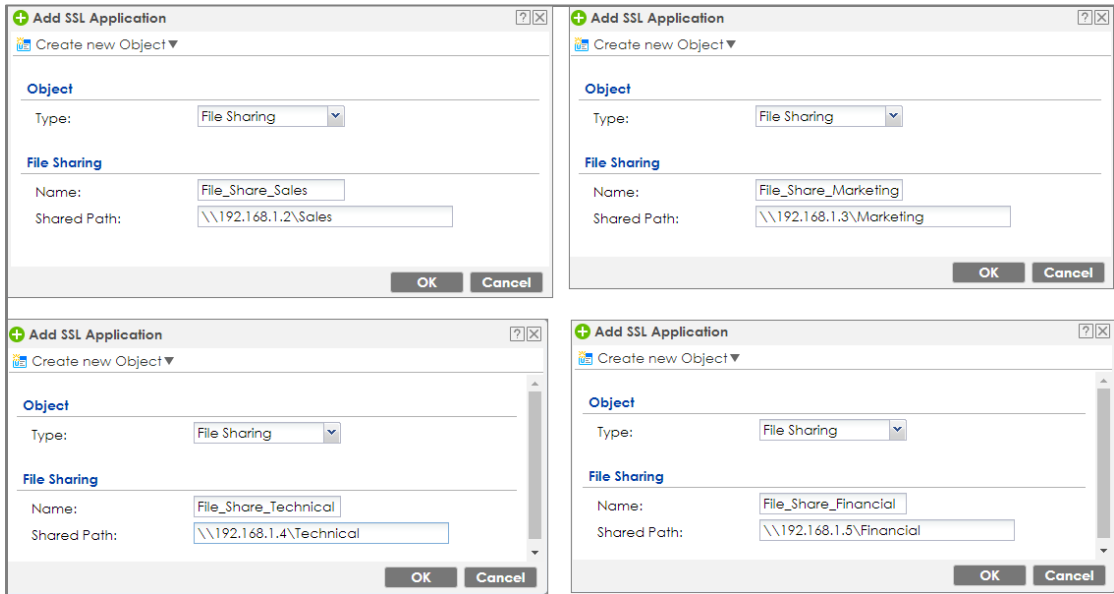

Retype:

Description:

OK Cancel

Go to **Create new Object > Application** to add servers that you will allow **SSL_VPN_1_Users** to access. Click **OK**.

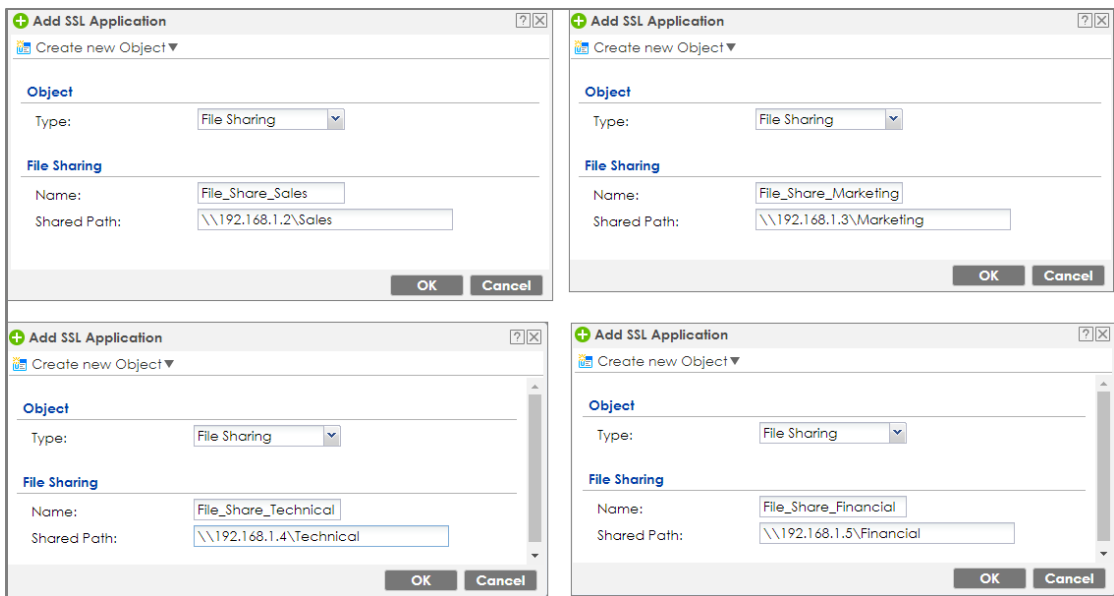

CONFIGURATION > VPN > SSL VPN > Access Privilege > Access Policy > Create new Object > Application

Then, move the just created address object to **Selected User/Group Objects**.

Similarly, in **SSL Application List (Optional)** move the servers you want available to SSL users to **Selected Application Objects**.

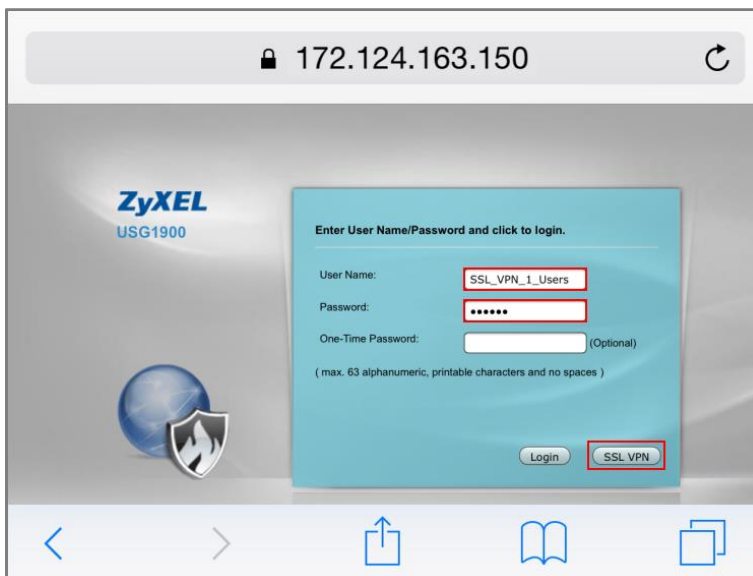

CONFIGURATION > VPN > SSL VPN > Access Privilege > Access Policy > User/Group & SSL Application

Test the SSL VPN Tunnel

Type the ZyWALL/USG's WAN IP into the browser, then the login screen appears.

Enter **User Name** and **Password** to be the same as your ZyWALL/USG **SSL VPN Selected User/Group** name and password (SSL_VPN_1_Users/zyx168 in this example). Click **SSL VPN**.

The **File Sharing** server appears.

Click the **File Sharing** folder you want to access, enter **User Name/ Password** of your **File Sharing** server and click **Login**.

The image shows a 'File Sharing' login dialog box. It contains the following text and elements:

- Header: File Sharing
- Instruction: Enter User Name/Password and click to login.
- User Name field: Financial_Admin
- Password field: 12 dots
- Footer: (max. 31 alphanumeric, printable characters and no spaces)
- Buttons: Login, Cancel

Now you can securely access the files.

The image shows the ZyXEL File Sharing web interface. The address bar displays the IP address 172.124.163.150. The interface includes a navigation bar with 'Application' and 'File Sharing' tabs, and a language dropdown set to 'English'. The main content area shows a file list for 'File_Share_Financial' with the following data:

#	Type	File Name	Size	Modified Date
1	Folder	Shareholders		2015-07-02 11:38:50
2	Folder	Cash_Flow_Statement		2015-10-29 17:15:19
3	Folder	Balance_Sheet		2015-10-10 13:36:47
4	Folder	Income_Statement		2015-10-29 17:16:28
5	File	desktop.ini	174	2009-10-14 12:54:24

The interface also features a sidebar with a globe and laptop icon, and a bottom navigation bar with back, forward, and other navigation icons.

What Could Go Wrong?

If you see [notice] or [alert] log message such as below, please check ZyWALL/USG SSL **Selected User/Group Objects** settings. Windows 10 users must use the same **Username** and **Password** as configured in ZyWALL/USG to establish the SSL VPN tunnel.

Priority	Category	Message	Note
notice	SSL VPN	Failed login attempt to SSLVPN from http/https (incorrect password or inexistent username)	Account: SSL_VPN_1...
alert	User	Failed login attempt to Device from http/https (incorrect password or inexistent username)	Account: SSL_VPN_1...

If you uploaded a logo to show in the SSL VPN user screens but it does not display properly, check that the logo graphic is in GIF, JPG, or PNG format. The graphic should use a resolution of 103 x 29 pixels to avoid distortion when displayed. The ZyWALL/USG automatically resizes a graphic of a different resolution to 103 x 29 pixels. The file size must be 100 kilobytes or less. Transparent background is recommended.

If users can log into the SSL VPN but cannot see some of the resource links check the SSL application object's configuration.

If the ZyWALL/USG redirects the user to the user aware screen, check whether the user account is included in an SSL VPN access policy or not.

Changing the HTTP/HTTPS configuration disconnects SSL VPN network extension sessions. Users need to re-connect if this happens.

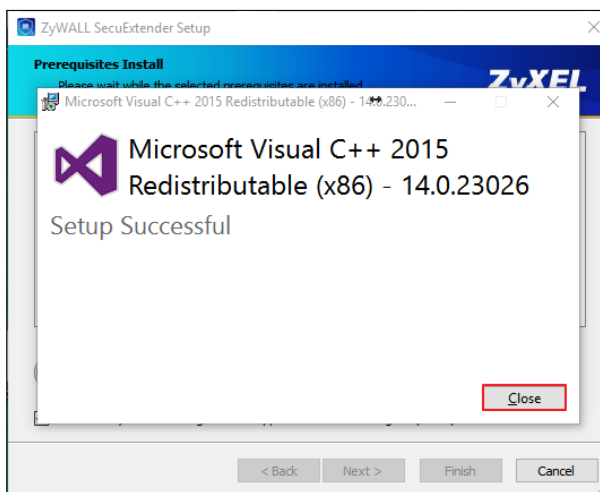

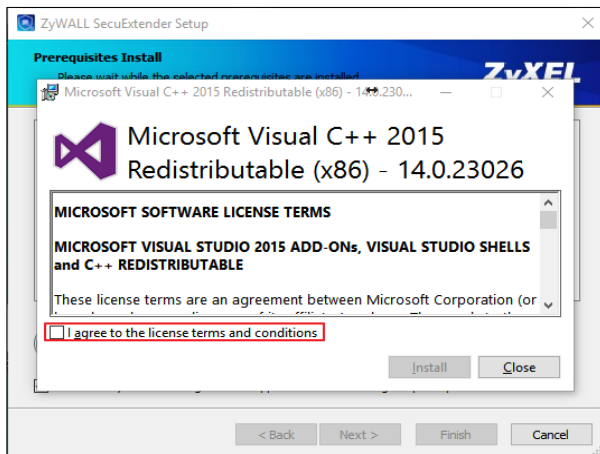

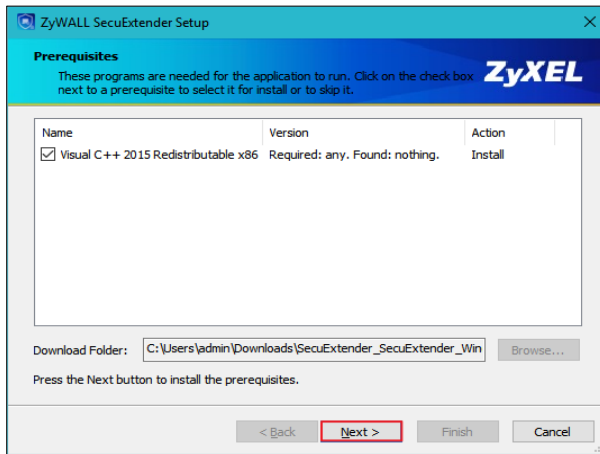

How to Configure an SSL VPN Tunnel (with SecuExtender version 4.0.0.1) on the Windows 10 Operating System

Set up the SSL VPN Tunnel with Windows 10

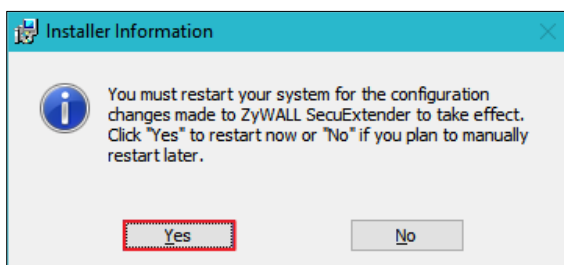

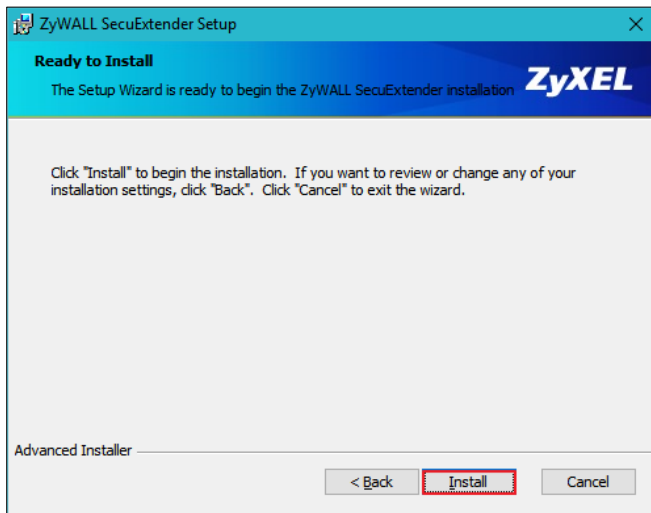

Please download SecuExtender version 4.0.0.1 from the download library of ZyXEL's official website.

Model	Material	Version	OS	Checksum	Release Date	Release Note	Download
ZyWALL IPsec VPN Client	Software	ZyWALLIPSecVPNClient3.7204.6113	Windows 7 32bit/ Windows 7 64bit/ Windows 8 32bit/ Windows 8 64bit/ Windows 10 32bit/ Windows 10 64bit		May 24, 2017		
SecuExtender	Software	SecuExtender_MacOSX1115	Mac 10X/ MAC 10.8/ MAC 10.9/ MAC 10.10		Mar 15, 2017		
SecuExtender	Software	SecuExtender_Windows4.0.2.0	Windows XP/ Windows 7 32bit/ Windows 7 64bit/ Windows 8 32bit/ Windows 8 64bit/ Windows 10 32bit/ Windows 10 64bit		Jan 18, 2017		

Before you start installing the SecuExtender, it is required to install the "Visual C++ 2015 Redistributable" package first. Click **Next**, select **I agree to the license terms and conditions**, and click **Install** to complete the Visual C++ 2015 Redistributable installation. After that, the setup wizard appears. Please note that the users need to reboot their systems after the SecuExtender installation is completed.

Double-click the shortcut icon on your desktop. It is the same as the SSL VPN standalone software on MAC OS X. Enter the server's IP or domain name, user name,

and password to connect to the server. The example below shows that the client IP is **7.7.7.1** and you can also check the traffic statistic in the **Status** screen.

You can verify the connection status from the computer's taskbar icon.

When connected, the icon is blue.

When disconnected, the icon is red.

You can also use the USG monitor screen to check the login list of the users.

Current User List						
#	User ID	Reauth/Lease Time	Type	IP Address	MAC	User Info
1	SSL_user1	23:59:17 / 23:59:47	SSLVPN	10.251.30.56/7.7.7.1	3C:97:0E:30:0E:B8	user(SSL_user1)

What Can Go Wrong?

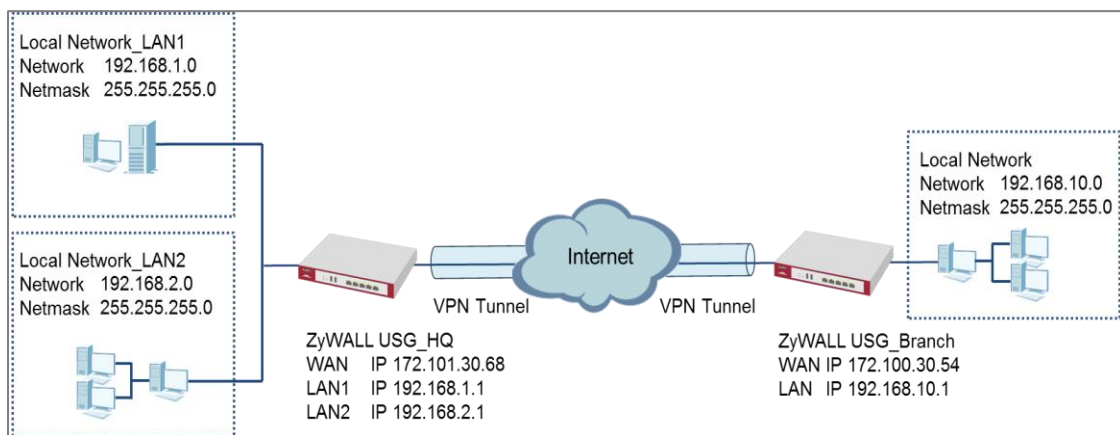

- 1 If you see a [notice] or [alert] log message such as shown below, please check the ZyWALL/USG SSL's **Selected User/Group Objects** settings. Windows 10 users must use the same **Username** and **Password** as configured in the ZyWALL/USG to establish the SSL VPN tunnel.

Priority	Category	Message	Note
notice	SSL VPN	Failed login attempt to SSLVPN from http/https (incorrect password or inexistent username)	Account: SSL_VPN_1_Users
alert	User	Failed login attempt to Device from http/https (incorrect password or inexistent username)	Account: SSL_VPN_1_Users

- 2** If you have uploaded a logo to show on the SSL VPN user screens but it does not display properly, check if the logo graphic is in GIF, JPG, or PNG format. The graphic should use a resolution of 103 x 29 pixels to avoid distortion when displayed. The ZyWALL/USG automatically resizes a graphic of a different resolution to 103 x 29 pixels. The file size must be 100 kilobytes or less. Transparent background is recommended.
- 3** If users can log into the SSL VPN but cannot see some of the resource links, check the SSL application object's configurations.
- 4** If the ZyWALL/USG redirects the user to the user aware screen, check whether the user account is included in an SSL VPN access policy or not.
- 5** If you have changed the HTTP/HTTPS configuration, the SSL VPN network extension sessions will be disconnected. The sessions need to be reconnected if this happens.

How to redirect multiple LAN interface traffic to the VPN tunnel

This example shows how to use the VPN Setup Wizard to create a site-to-site VPN with multiple LAN access to the VPN tunnel. The example instructs how to configure the VPN tunnel between each site and redirect multiple LAN interface traffic to the VPN tunnel. When the VPN tunnel is configured, multiple LAN subnets can be accessed securely.

ZyWALL Site-to-site IPsec VPN with multiple LAN access

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the ZyWALL/USG IPSec VPN Tunnel of Corporate Network (HQ)

In the ZyWALL/USG, go to **Quick Setup > VPN Setup Wizard**, use the **VPN Settings** wizard to create a VPN rule that can be used with the remote ZyWALL/USG. Click **Next**.

Quick Setup > VPN Setup Wizard > Welcome

VPN Setup Wizard

Wizard Type > VPN Settings > Wizard Completed

What Could Go Wrong?

If you see below [info] or [error] log message, please check ZyWALL/USG Phase 1 Settings. Both ZyWALL/USG at the HQ and Branch sites must use the same Pre-Shared Key, Encryption, Authentication method, DH key group and ID Type to establish the IKE SA.

MONITOR > Log

Priority	Category	Message	Note
info	IKE	[COOKIE] Invalid cookie, no sa found	IKE_LOG
Priority	Category	Message	Note
info	IKE	Recv:[NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG
info	IKE	[SA] : Tunnel [HQ1] Phase 1 proposal mismatch	IKE_LOG

If you see that Phase 1 IKE SA process done but still get below [info] log message, please check ZyWALL/USG Phase 2 Settings. Both ZyWALL/USG at the HQ and Branch sites must use the same Protocol, Encapsulation, Encryption, Authentication method and PFS to establish the IKE SA.

MONITOR > Log

Priority	Cate...	Message	Note
info	IKE	Recv:[HASH][NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG
info	IKE	Send:[HASH][SA][NONCE][ID][ID]	IKE_LOG
info	IKE	Send:[HASH][NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG
info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[SA] : Tunnel [BO1] Phase 2 proposal mismatch	IKE_LOG
info	IKE	Recv:[HASH][SA][NONCE][ID][ID]	IKE_LOG
info	IKE	Phase 1 IKE SA process done	IKE_LOG

Make sure the both ZyWALL/USG at the HQ and Branch sites security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.

Default NAT traversal is enable on ZyWALL/USG, please make sure the remote IPSec device must also have NAT traversal enabled.

How to Create VTI and Configure VPN Failover with VTI

This example illustrates how to create a VTI object and configure a policy route with the VTI. Furthermore, it applies the VTI to the WAN trunk to achieve VPN load balancing.

VPN Load Balance with VTI

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG110 (Firmware Version: ZLD 4.25).

VTI Deployment Flow

- 1 Configure the VPN gateways.
- 2 Configure a VPN tunnel for each VPN gateway with the application scenario VPN Tunnel Interface.
- 3 Create a VTI for each VPN tunnel.
- 4 Create a trunk with the VTIs.
- 5 Configure a policy route.
- 6 Connect the VPN tunnels.

Set Up the ZyWALL/USG VTI of Corporate Network (HQ)

1 In the ZyWALL/USG, go to **CONFIGURATION > VPN > IPSec VPN > VPN Gateway > Add** to create the VPN gateway **HQ1** with **wan1**.

CONFIGURATION > VPN > IPSec VPN > VPN Gateway > Add

The screenshot shows the configuration page for a new VPN gateway named HQ1. The 'General Settings' section has 'Enable' checked and 'VPN Gateway Name' set to HQ1. Under 'IKE Version', 'IKEv1' is selected. The 'Gateway Settings' section has 'My Address' set to 'Interface' (wan1) and 'Peer Gateway Address' set to 'Static Address' with a primary address of 10.214.30.77. The 'Authentication' section has 'Pre-Shared Key' selected with a masked key field.

2 In the same screen, create the VPN gateway **HQ2** with **wan2**.

CONFIGURATION > VPN > IPSec VPN > VPN Gateway > Add

The screenshot shows the configuration page for a new VPN gateway named HQ2. The 'General Settings' section has 'Enable' checked and 'VPN Gateway Name' set to HQ2. Under 'IKE Version', 'IKEv1' is selected. The 'Gateway Settings' section has 'My Address' set to 'Interface' (wan2) and 'Peer Gateway Address' set to 'Static Address' with a primary address of 10.214.30.84. The 'Authentication' section has 'Pre-Shared Key' selected with a masked key field.

3 Go to **CONFIGURATION > VPN > IPsec VPN > VPN Connection > Add** and configure a VPN tunnel for the VPN gateway **HQ1**. Select **VPN Tunnel Interface** as the application scenario.

CONFIGURATION > VPN > IPsec VPN > VPN Connection > Add

What Can Go Wrong?

- 1 If you see below [info] or [error] log message, please check ZyWALL/USG Phase 1 Settings. Both ZyWALL/USG at the HQ and Branch sites must use the same Pre-Shared Key, Encryption, Authentication method, DH key group and ID Type to establish the IKE SA.

MONITOR > Log

Priority	Category	Message	Note
info	IKE	[COOKIE] Invalid cookie, no sa found	IKE_LOG
Priority	Category	Message	Note
info	IKE	Recv:[NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG
info	IKE	[SA] : Tunnel [HQ1] Phase 1 proposal mismatch	IKE_LOG

- 2 If you see that Phase 1 IKE SA process done but still get below [info] log message, please check ZyWALL/USG Phase 2 Settings. Both ZyWALL/USG at the HQ and Branch sites must use the same Protocol, Encapsulation, Encryption, Authentication method and PFS to establish the IKE SA.

MONITOR > Log

Priority	Cate...	Message	Note
info	IKE	Recv:[HASH][NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG
info	IKE	Send:[HASH][SA][NONCE][ID][ID]	IKE_LOG
info	IKE	Send:[HASH][NOTIFY:NO_PROPOSAL_CHOSEN]	IKE_LOG
info	IKE	[SA] : No proposal chosen	IKE_LOG
info	IKE	[SA] : Tunnel [BO1] Phase 2 proposal mismatch	IKE_LOG
info	IKE	Recv:[HASH][SA][NONCE][ID][ID]	IKE_LOG
info	IKE	Phase 1 IKE SA process done	IKE_LOG

- 3 Make sure the both ZyWALL/USG at the HQ and Branch sites security policies allow IPSec VPN traffic. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.
- 4 Default NAT traversal is enable on ZyWALL/USG, please make sure the remote IPSec device must also have NAT traversal enabled.
- 5 Make sure the both ZyWALL/USG at the HQ and Branch sites use static IP address because VPN Tunnel Interface does not support dynamic peer.
- 6 Make sure policy routes are configured to control traffic between the subnet of HQ and Branch through VTI.
- 7 Make sure that the IP address of VTI at the Branch must be in the same subnet as vti1 on HQ. For example, the IP address and subnet mask of vti1 on HQ is 10.10.10.10 and 255.255.255.0 respectively. The IP address of vti1 on the Branch must be in the subnet of 10.10.10.0/24; the IP address and subnet mask of vti2 on HQ is 10.10.11.10 and 255.255.255.0 respectively. The IP address of vti2 on the Branch must be in the subnet of 10.10.10.0/24, and so on.

How to configure the USG when using a Cloud Based SIP system

This example shows how to configure USG when there is a Cloud Based SIP system. The IP phones are more and more popular nowadays. USG supports the scenario as IP phones located in LAN and connect to internet to register the SIP server.

SIP Phone connects to SIP server via USG.

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG210 (Firmware Version: ZLD 4.25).

Set Up the SIP ALG

Go to **CONFIGURATION > Network > ALG**, and check **"Enable SIP ALG"**. Also, check the **"Enable SIP Transformations"** if the SIP content which is needed to be transform. Then click **"Apply"**.

CONFIGURATION > Network > ALG

ALG

SIP Settings

- Enable SIP ALG
 - Enable SIP Transformations
 - Enable Configure SIP Inactivity Timeout
 - SIP Media Inactivity Timeout : (seconds)
 - SIP Signaling Inactivity Timeout : (seconds)
 - Restrict Peer to Peer Signaling Connection
 - Restrict Peer to Peer Media Connection ⓘ
- SIP Signaling Port :

#	Port
1	5060

Direct-media and Direct-signalling are activated after ZLD 4.25. We can use the CLI to show the status. When the two options are yes, it will change the original sip alg behavior.

direct-signalling will expect incoming calls from register only.

direct-media will expect media streams between signalling endpoints only.

Test result

Connect SIP phone to the USG, and check the register status. Register successfully.

SIP Accounts				
#	Display Name	Registration Server	Status	Registration
1	2436	10.214.30.86	registered	Enable

Check the SIP register status on PBX.

#	Time	Priority	Category	Message
2	2017-07-07 04:20:...	notice	PBX SIP	Extension '2436' registered successfully at 10.214.30.90:5061 with expire time 3276.
3	2017-07-07 04:20:...	notice	PBX SIP	Extension 2436 registered successfully with expire time 3276

What could go wrong?

SIP phone does not support transform itself, but the **"SIP Transformations"** does not be checked.

How to block HTTPS websites by Domain Filter without applying SSL Inspection

The Content Filter with HTTPs Domain Filter allows you to block HTTPs websites by category service without SSL-Inspection. The filtering feature is based on more than 50 Managed Categories built in ZyWALL/USG such as pornography, gambling, hacking, etc.

When user makes HTTPS request, the information contains a Server Name Indication (SNI) extension fields in server FQDN. Using the SNI to query category from Commtouch engine, then take action when it matches the block category in Content Filter profile.

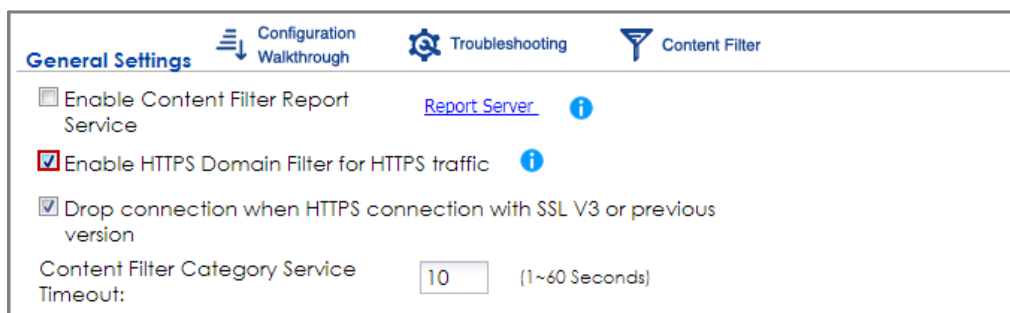

ZyWALL/USG Domain Filter Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: 4.25)

Set Up the Content Filter on the ZyWALL/USG

Go to **CONFIGURATION > UTM Profile > Content Filter > Profile > General Settings**. Select **Enable HTTPS Domain Filter for HTTPS traffic**.

Go to **CONFIGURATION > UTM Profile > Content Filter > Profile Management > Add Filter Profile > Test Web Site Category**. Type URL to test the category and click **Test Against Content Filter Category Server**.

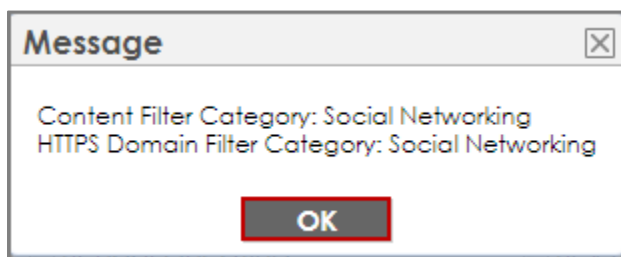

Test Web Site Category

URL to test:

[Test Against Content Filter Category Server](#)

[If you think the category is incorrect, click this link to submit a request to review it.](#)

You will see the category recorded in the external content filter server's database for both HTTP and HTTPS Domain you specified.

Go to **CONFIGURATION > UTM Profile > Content Filter > Profile Management > Add Filter File > Custom Service**. Configure a **Name** for you to identify the **Content Filter Profile** and select **Enable Content Filter Category Service**. Select **Block** to prevent users from accessing web pages that match the managed categories that you select below. Select **Log** to record attempts to access web pages that match the unsafe categories that you select below.

How to Configure Content Filter 2.0 with Geo IP Blocking

The Content Filter 2.0 - Geo IP blocking offers identify the country based on IP address, it allows you to block the client accessing to certain country based on organizational policy.

When user makes HTTP or HTTPS request, ZyWALL/USG query IP address from MaxMind database, then take action when it matches the block country in Content Filter profile.

If you have a local web site and your primary market is local people, then there is no need to let any other countries index or waste bandwidth on your server.

Also this feature offer an easy and effective way to prevent bogus, bots, brute force hacks, vulnerability scanners, and web crawlers from other countries.

Set Up the Address Object with Geo IP on the ZyWALL/USG

Go to **CONFIGURATION > Object > Address/Geo IP > Address > Add Address Rule.**

Edit Address Rule Taiwan

Name:

Address Type:

Country:

OK Cancel

Go to **CONFIGURATION > Object > Address/Geo IP > Address**, you can see the customized GEOGRAPHY address.

IPv4 Address Configuration

Address | Address Group | Geo IP

#	Name	Type	IPv4 Address
1	wan2	INTERFACE IP	wan2-10.251.30.90
2	LAN2_SUBNET	INTERFACE SUBNET	lan2-192.168.2.0/24
3	LAN1_SUBNET	INTERFACE SUBNET	lan1-192.168.1.0/24
4	DMZ_SUBNET	INTERFACE SUBNET	dmz-192.168.3.0/24
5	Taiwan	GEOGRAPHY	Taiwan-All
6	IP6to4-Relay	HOST	192.88.99.1
7	l2tp_pool	RANGE	192.168.10.10-192.168.10.20
8	RFC1918_3	SUBNET	192.168.0.0/16
9	RFC1918_2	SUBNET	172.16.0.0/12

Set Up the Security Policy on the ZyWALL/USG

Go to **CONFIGURATION > Security Policy > Policy Control**, configure a **Name** for you to identify the **Security Policy** profile. Set Geo IP traffic from WAN to LAN allow source from local country (geo_allow_policy in this example).

Edit Policy1

Create new Object ▾

Enable

Name: geo_allow_policy

Description: (Optional)

From: WAN

To: LAN1

Source: Taiwan

Destination: any

Service: any

User: any

Schedule: none

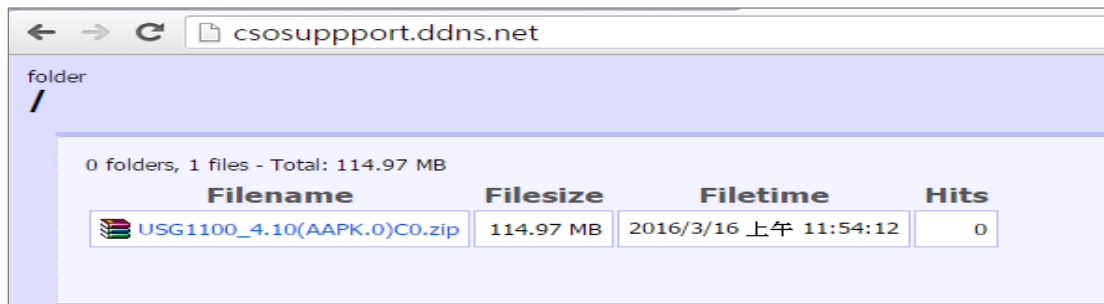

Action: allow

Log matched traffic: log

Go to **CONFIGURATION > Security Policy > Policy Control**, configure a **Name** for you to identify the **Security Policy** profile. Set traffic from WAN to LAN deny (geo_block_policy in this example).

Test the Result

Type <http://csosupport.ddns.net/> into the browser, and the http can be reached.

Go to the ZyWALL/USG **Monitor > Log**, you will see [notice] log message such as below. Traffic matches Geo IP policy will be blocked and shows in message field.

#	Time	Priority	Category	Message	Source	Destination	Note
1	2016-08-04 1...	notice	Security Polic...	priority:1, from WAN to LAN1, TCP, service others, DNAT Packet, ACC...	114.34.247.205:641...	192.168.1.34:80	ACCESS FORW...
2	2016-08-04 1...	notice	Security Polic...	priority:1, from WAN to LAN1, TCP, service others, DNAT Packet, ACCEPT	114.34.247.205:641...	192.168.1.34:80	ACCESS FORW...
3	2016-08-04 1...	notice	Security Polic...	priority:1, from WAN to LAN1, TCP, service others, DNAT Packet, ACC...	114.34.247.205:641...	192.168.1.34:80	ACCESS FORW...
4	2016-08-04 1...	notice	Security Polic...	priority:1, from WAN to LAN1, TCP, service others, DNAT Packet, ACC...	114.34.247.205:641...	192.168.1.34:80	ACCESS FORW...

What Could Go Wrong?

1. The Security Policy configured wrong. The traffic cannot access the LAN server.

#	Time	Priority	Category	Message	Source	Destination	Note
5	2016-08-19 1...	alert	Security Polic...	Match default rule, DNAT Packet, DROP [count=3]	114.34.247.205:...	192.168.1.34:80	ACCESS BLOCK
6	2016-08-19 1...	alert	Security Polic...	Match default rule, DNAT Packet, DROP [count=3]	114.34.247.205:...	192.168.1.34:80	ACCESS BLOCK

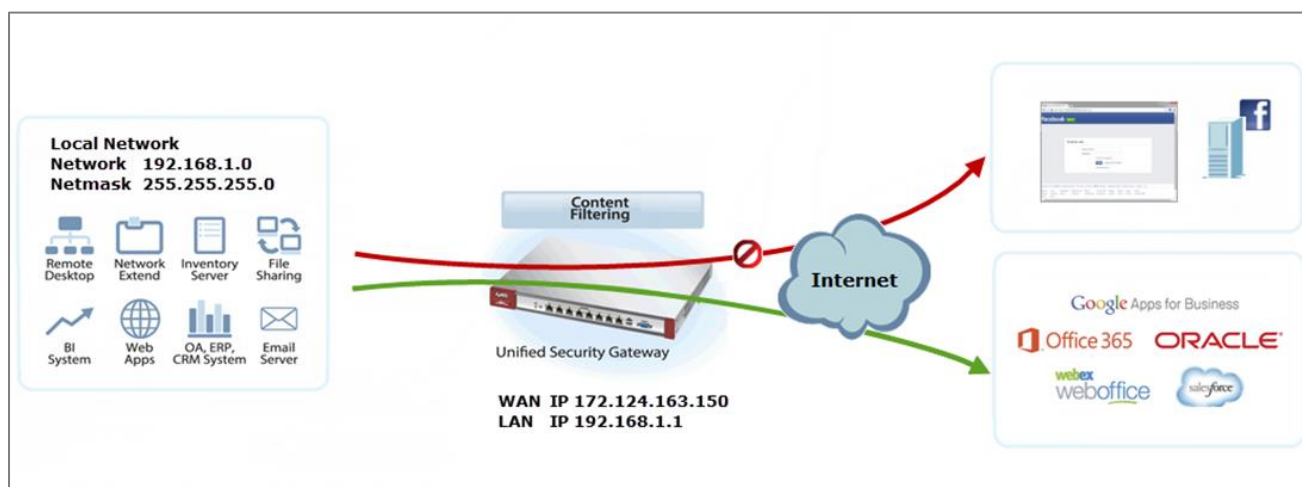

2. The Content-Filter service is expired. Since Geo-IP server is bind with Content-Filter license, there must be available date for Content-Filter service.

How to Configure Content Filter 2.0 with HTTPs Domain Filter

Application Scenario

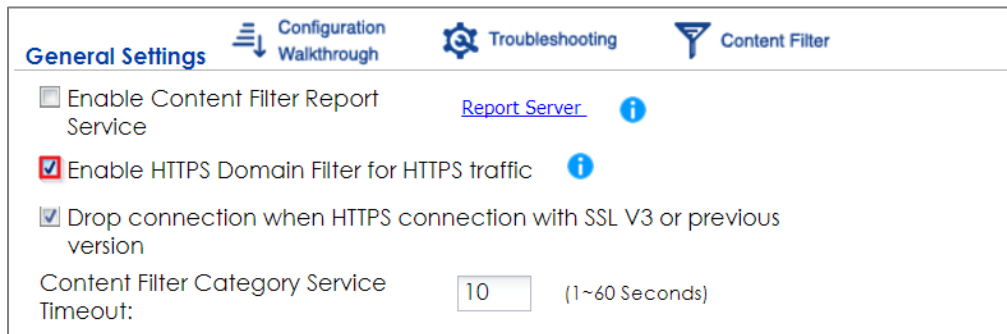

The Content Filter with HTTPs Domain Filter allows you to block HTTPs websites by category service without SSL-Inspection. The filtering feature is based on 64 categories built in ZyWALL/USG such as pornography, gambling, hacking, etc.

When user makes HTTPS request, the information contains a Server Name Indication (SNI) extension fields in server FQDN. Using the SNI to query category from local cache then cloud database, then take action when it matches the block category in Content Filter profile.

Set Up the Content Filter on the ZyWALL/USG

Go to **CONFIGURATION > UTM Profile > Content Filter > Profile > General Settings**. Select **Enable HTTPs Domain Filter for HTTPs traffic**.

Go to **CONFIGURATION > UTM Profile > Content Filter > Profile Management > Add Filter Profile > Test Web Site Category**. Type URL to test the category and click **Test Against Content Filter Category Server**.

You will see the category recorded in the external content filter server's database for both HTTP and HTTPS Domain you specified.

Go to **CONFIGURATION > UTM Profile > Content Filter > Profile Management > Add Filter File > Custom Service**. Configure a **Name** for you to identify the **Content Filter Profile** and select **Enable Content Filter Category Service**. Select **Block** to prevent users from accessing web pages that match the managed categories that you select below. Select **Log** to record attempts to access web pages that match the unsafe categories that you select below.

30	20...	alert	Blocked w...	facebook.com : Social Networking, Rule_id=1, SSI=N (HTTPS Domain...	192.168.2.3...	31...	WEB BLOCK

What Could Wrong?

1. "Enable HTTPS Domain Filter for HTTPS traffic" is not checked.

HTTPs traffic will pass.

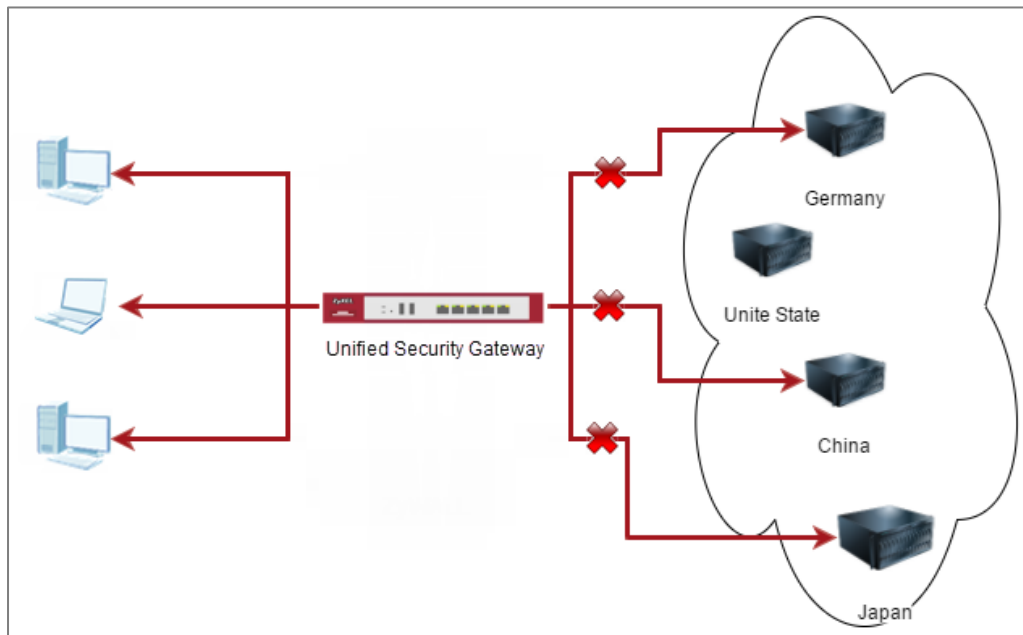

How to block the client accessing to certain country using Geo IP and Content Filter

The Content Filter with Geo IP offers identify the country based on IP address, it allows you to block the client accessing to certain country based on organizational policy.

When user makes HTTP or HTTPS request, ZyWALL/USG query IP address from MaxMind database, then take action when it matches the block country in Content Filter profile.

ZyWALL/USG Geo IP Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: 4.25)

Check Geo IP License Status on the ZyWALL/USG

Go to **CONFIGURATION > Licensing > Registration > Service**, the **Geo IP Service** should be **Licensed** to configure this feature.

#	Service	Status	Service Type	Expiration ...	Count	Action
1	Content Filter 2.0	Licensed	Standard	2018-7-6	N/A	Renew
2	SSL VPN Service	Licensed	Standard		60	Buy
3	Managed AP Service	Default	Standard		4	Buy
4	Zymesh Service	Not Licens...			N/A	
5	Concurrent Device Upgr...	Default	Standard		200	Buy
6	Device HA Pro	Not Licens...			N/A	Buy
7	Firmware Upgrade Service	Not Licens...			N/A	
8	SecuReporter	Not Licens...			N/A	Buy

Set Up the Address Object with Geo IP on the ZyWALL/USG

Go to **CONFIGURATION > Object > Address/Geo IP > Address > Add Address Rule**.

+ Add Address Rule ? X

Name:

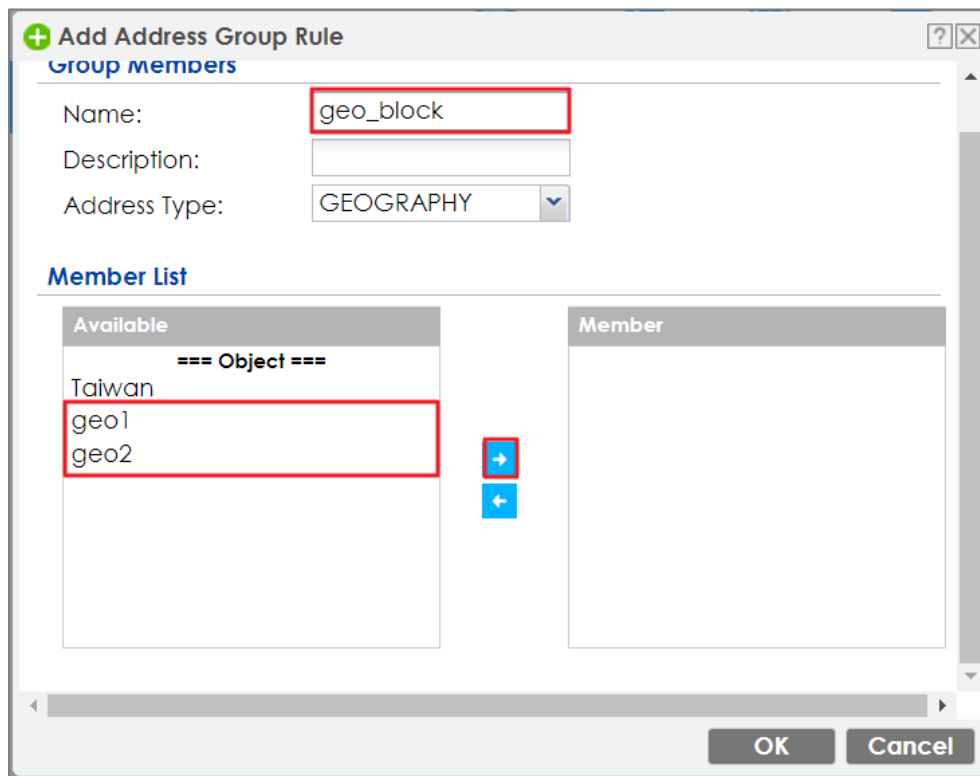

Address Type:

Country:

Go to **CONFIGURATION > Object > Address/Geo IP > Address**, you can see the customized GEOGRAPHY address.

#	Name	Type	IPv4 Address	Refer...
1	DMZ_SUBNET	INTERFACE SUBNET	ge6-192.168.3.0/24	0
2	IP6to4-Relay	HOST	192.88.99.1	0
3	LAN_SUBNET_GE4	INTERFACE SUBNET	ge4-192.168.1.0/24	0
4	LAN_SUBNET_GE5	INTERFACE SUBNET	ge5-192.168.2.0/24	0
5	RFC1918_1	SUBNET	10.0.0.0/8	1
6	RFC1918_2	SUBNET	172.16.0.0/12	1
7	RFC1918_3	SUBNET	192.168.0.0/16	1
8	Taiwan	GEOGRAPHY	Taiwan-All	1
9	geo1	GEOGRAPHY	China-All	0
10	geo2	GEOGRAPHY	Germany-All	0

Go to **CONFIGURATION > Object > Address/Geo IP > Address Group > Add Address Group Rule**, add all customized GEOGRAPHY address into the same **Member** object.

Set Up the Security Policy on the ZyWALL/USG

Go to **CONFIGURATION > Security Policy > Policy Control**, configure a **Name** for you to identify the **Security Policy** profile. Set deny Geo IP traffic from LAN to WAN (geo_block_policy in this example).

+ Add corresponding [?] [X]

How to set up Link Aggregation Group (LAG)

A Link Aggregation Group (LAG) allows you to combine a number of physical ports together to create a single high bandwidth data path. It helps to implement the traffic to perform load balancing or failover features, depending on the situation of the actual case.

LAG interface supported models: ZyWALL 310/1100/1900, USG 310/1100/1900

The link aggregation supported models have Active-backup, 802.3ad (LACP), and Balance-alb modes. Link aggregation supports IPsec tunnel, VLAN, and bridge interface.

Device HA Pro is supported on the LAG interface but Device HA is not.

Set up the Active-backup, 802.3ad, Balance-alb

Active-backup Mode:

(Does not require switch configuration and one or multiple switches can be used.)

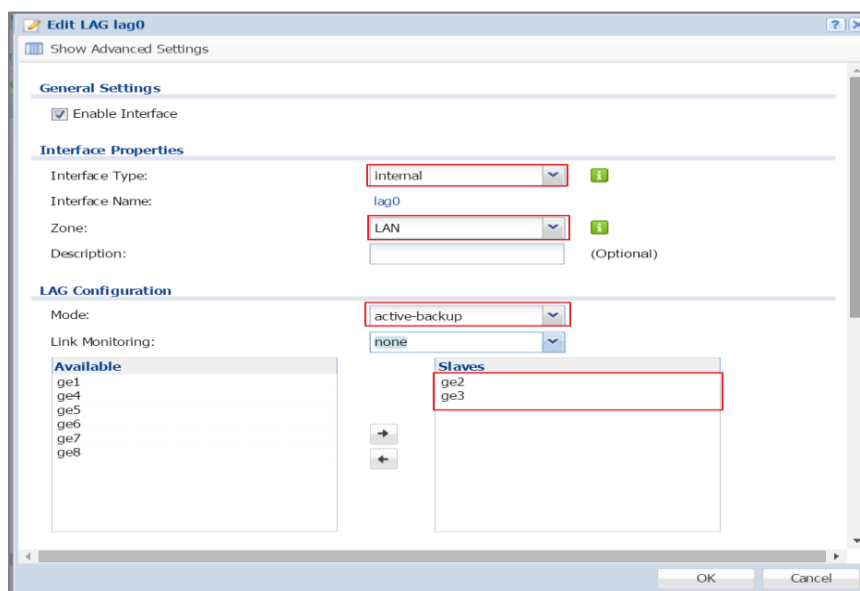

Only the USG needs to be configured. You do not need to change any settings on the switch.

On the USG, go to **Configuration > Network > Interface > LAG**.

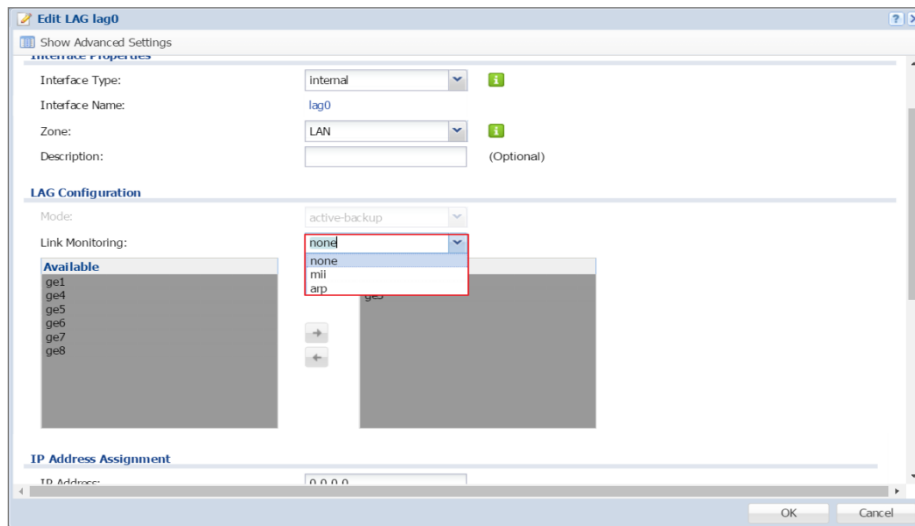

Choose the proper interface type and zone depending on the case. Also, select the slave ports that will be added in the LAG interface.

The interface format will be **lagx** (x = 0~3).

Link Monitoring:

You can choose link up/down detection (specify the MII link monitoring frequency or ARP interval time).

LAG Configuration		
Mode:	active-backup	
Link Monitoring:	mii	
Miimon:	1000	(1-1000 ms)
Updelay:	0	(0-1000 ms)
Downdelay:	0	(0-1000 ms)

Updelay is the time to wait to enable the slave port after the device detects the link recovery.

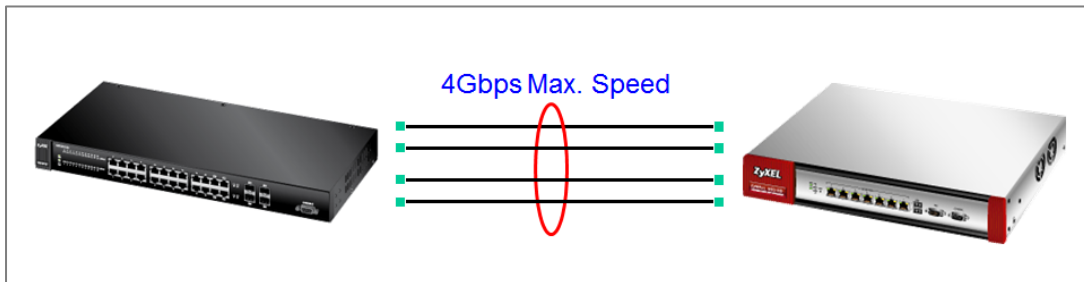

Downdelay is the time to wait to disable the slave port after the device detects the link failure.

LAG Configuration		
Mode:	active-backup	
Link Monitoring:	arp	
ARP Interval:	100	(1-1000 ms)
ARP IP Target:	0.0.0.0	

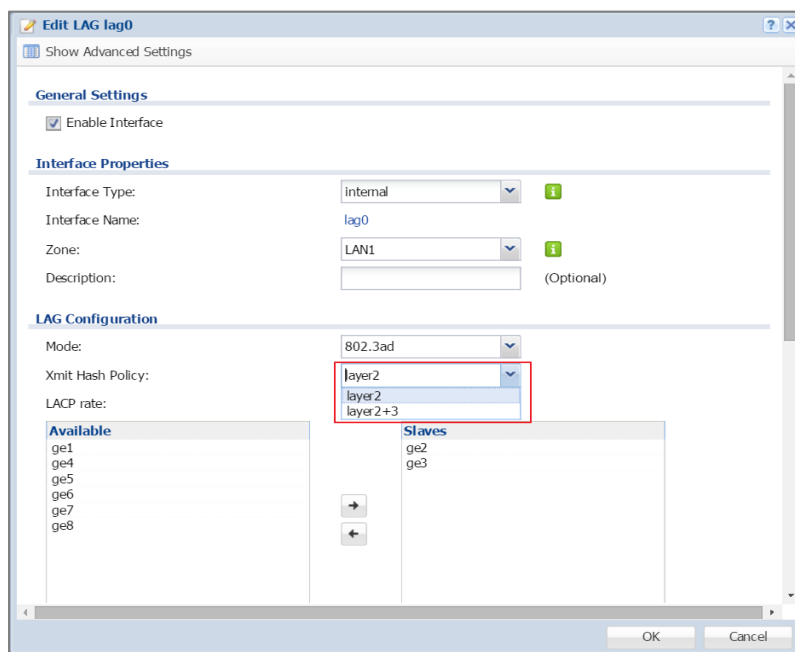

The target IP can be the Layer 3 device or the host IP, can be reachable by the USG.

802.3ad (LACP) Mode:

(Both devices need to be configured. Only one switch can be used. The port speed and duplex must be the same.)

The USG should be connected to only one switch and its settings should be the same as the switch. This utilizes all slave network interfaces in the active aggregator group according to the 802.3ad specification.

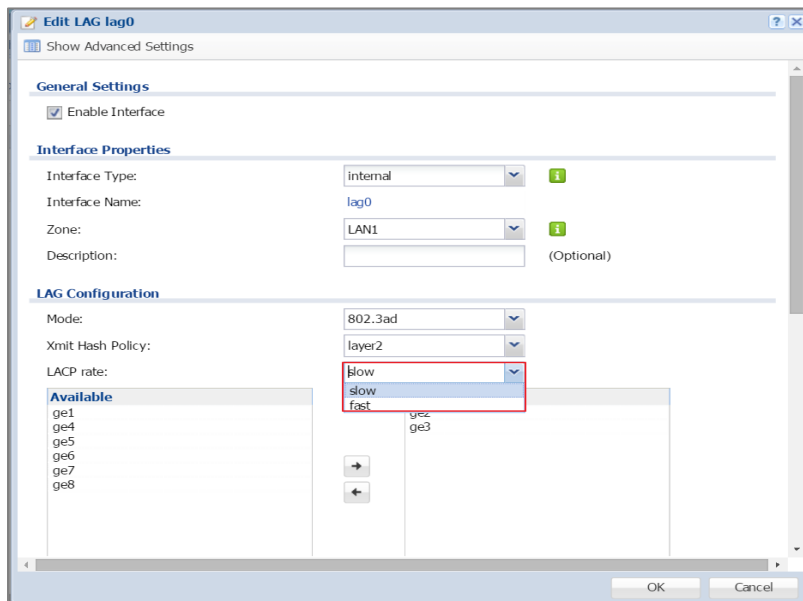

Xmit Hash Policy:

Xmit Hash policy: Select **layer2** or **layer2+3**.

Select **layer 2** if the LAG interface is connect to a layer 2 subnet.

Select **layer 2+3** if the LAG interface is connect to a network with a router or a L3 switch.

LACP rate:

The interval can be fast (every second) or slow (every 30 seconds).

Balance-alb Mode:

(Does not require configuration on the switch and one or multiple switches can be used.)

Set up the active-backup mode.

The VLAN interface is cross-connected to different switches and the link statuses on both switches are active.

In this case, the LAG interface mode must be set to **Balance-alb**.

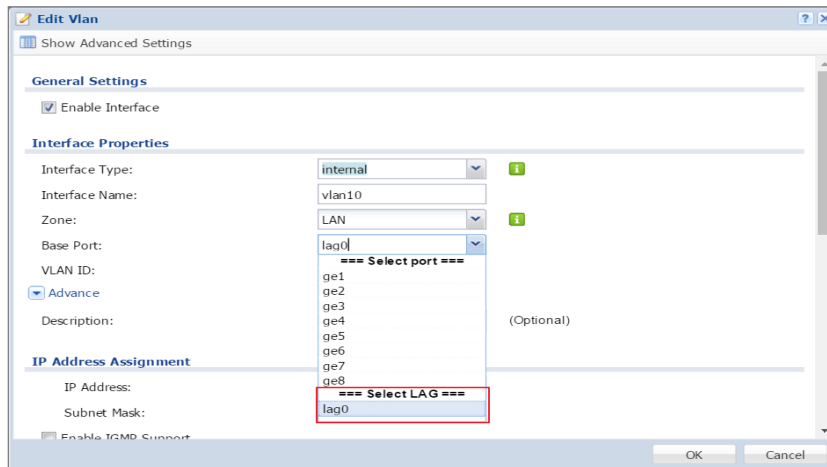

The VLAN interface is cross-connected to different switches (fault tolerance).

Only one link connection is up and the other is down. In this case, you will need to use the **active-backup** mode.

You can find the LAG interface in the VLAN interface.

Test the Result

After the deployment you can see the interface status through **Monitor>interface Status**

lag0	P4, P5	Up	n/a	LAN	192.168.70.2...	Static	DHCP server	n/a
vlan66	lag0	Up	n/a	LAN	192.168.66.2...	Static	DHCP server	n/a

Below we are using 802.3ad LAG interface with Vlan66 for the example, unplug one of the network cable during the ping, the connection should still alive after one ping lost.

#	Stat...	Name	Mode	IP Address	Slaves
1	🟡	lag0	802.3ad	STATIC -- 0.0.0.0	ge4, ge5

#	Status	Name	Port/VID	IP Address	Mask
1	🟡	vlan66	lag0/66	static --192.168.66.254	255.255.255.0

```

What can go wrong

1. Configure all the related setting on LAG interface before you connect the link.
2. Make sure you have the corresponding setting on your switch if using 802.3ad (LACP).
3. Check the Xmit Hash policy or the link monitoring method.
4. To adjust the sensitivity of the updelay and downdelay when using active-backup or balance-alb mode.

How to Restrict Web Portal access from the Internet

This example shows how to use the VPN Setup Wizard to create a site-to-site VPN with multiple LAN access to the VPN tunnel. The example instructs how to configure the VPN tunnel between each site and redirect multiple LAN interface traffic to the VPN tunnel. When the VPN tunnel is configured, multiple LAN subnets can be accessed securely.

ZyWALL/USG Restrict Web Portal Access from the Internet

Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG60 (Firmware Version: ZLD 4.25).

Set Up the ZyWALL/USG System Setting

Go to **CONFIGURATION > System > WWW > Admin Service Control > Add Admin ACL Rule 1**. Set the address access action as **Deny** for **ALL** address in **WAN**.

How to Setup and Configure Daily Report

This example shows how to set up the data collection and view various statistics about traffic passing through your ZyWALL/USG. When the Daily Report is configured, you will receive statistics report every day.

ZyWALL/USG Setup and Configure Daily Report

 **Note:** All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG110 (Firmware Version: ZLD 4.25).

Set Up the ZyWALL/USG Email Daily Report Setting

Go to **CONFIGURATION > Log & Report > Email Daily Report > General Settings**. Select **Enable Email Daily Report** to send reports by e-mail every day.

CONFIGURATION > Log & Report > Email Daily Report > General Settings

General Settings

Enable Email Daily Report

Type the SMTP server name or IP address. In **Mail From**, type the e-mail address from which the outgoing e-mail is delivered. In **Mail To**, type the e-mail address to which the outgoing e-mail is delivered. Select **SMTP Authentication** if it is necessary to provide a user name and password to the SMTP server.

CONFIGURATION > Log & Report > Email Daily Report > Email Settings

Mail Server

General Settings

Mail Server: (Outgoing SMTP Server Name or IP Address)

Mail Subject: Append system name Append date time

Mail Server Port: TLS Security STARTTLS Authenticate Server

Mail From: (Email Address)

SMTP Authentication

User Name:

Password:

Retype to Confirm:

Schedule

Time For Sending Report: (hours) (minutes)

In the **CONFIGURATION > Log & Report > Email Daily Report > Schedule**. Select the time of day (hours and minutes) when the log is e-mailed. Use 24-hour notation.

CONFIGURATION > Log & Report > Email Daily Report > Schedule

Schedule

Time For Sending Report: (hours) (minutes)

Select the information to include in the report. Types of information include **System Resource Usage**, **Wireless Report**, **Threat Report**, and **Interface Traffic Statistics**.

Select **Reset counters after sending report successfully** if you only want to see statistics for a 24 hour period.

CONFIGURATION > Log & Report > Email Daily Report > Report Items

How to Setup and Configure Email Logs

This example shows how to set up the e-mail profiles to mail ZyWALL/USG log messages to the specific destinations. You can also specify which log messages to e-mail, and where and how often to e-mail them. When the Email Logs is configured, you will receive logs email report base on customized schedule.

ZyWALL/USG Setup and Configure E-mail Logs

Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG110 (Firmware Version: ZLD 4.25).

Set Up the ZyWALL/USG Email Logs Setting

1. Go to **CONFIGURATION > Log & Report > Log Settings > System Log > Edit > E-mail Server 1**. Select **Active**. Type the SMTP server name or IP address. In **Mail From**, type the e-mail address from which the outgoing e-mail is delivered. In **Mail To**, type the e-mail address to which the outgoing e-mail is delivered.
2. **Day for Sending Log** is available if the log is e-mailed weekly. Select the day of the week the log is e-mailed.
3. **Time for Sending Log** is available if the log is e-mailed weekly or daily. Select the time of day (hours and minutes) when the log is e-mailed. Use 24-hour notation.
4. Select **SMTP Authentication** if it is necessary to provide a user name and password to the SMTP server.

CONFIGURATION > Log & Report > Log Settings > System Log > Edit > E-mail Server 1

How to Setup and send logs to a Syslog Server

This example shows how to set up the syslog server profiles to mail ZyWALL/USG log messages to the specific destinations. You can also specify which log messages to syslog server. When the syslog server is configured, you will receive the real time system logs.

ZyWALL/USG Setup and Configure sending logs to a syslog and Vantage Reports Server

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG110 (Firmware Version: ZLD 4.25).

Set Up the Syslog Server (Use Papertrail syslog in this example)

Register an account on Papertrail: <https://papertrailapp.com>

Go to **Dashboard > Add Systems**.

Dashboard > Add Systems

Select **Not shown here?** and **My syslog daemon only sends to port 514**.

Dashboard > Add Systems > I'm using

Select **My syslogd only uses the default port**, set ZyWALL/USG public IP address (111.250.188.9 in this example) and name the log system. Click **Save**.

Dashboard > Add Systems > > I'm using > Choose your situation

papertrail Dashboard Events Alerts Settings Help

Choose your situation:

- A My syslogd only uses the default port**
GNU syslogd and some embedded devices will only log to port 514. A few old Linux distro versions use GNU syslogd (mostly CentOS and Gentoo).
- B I use Cloud Foundry**
Register each app separately. Use Heroku? [Here's how.](#)
- C My system's hostname changes**
In rare cases, one system may change hostnames frequently. For example, a roaming laptop which sets its hostname based on DHCP (and roams across networks).

Let's create a log destination on port 514 that works with GNU syslogd.

Multiple systems share 1 IP (NAT)? Enter the same IP for each. We'll do the rest.

111.250.188.9
Example: 208.57.123.234

What should we call it?
ZyXEL_Log
Examples: www42, SYS_1, db1.example.com. Does not need to match hostname.

Save

Write down the Papertrail-provided domain name (logs.papertrailapp.com in this example).

Dashboard > Add Systems >> I'm using > Choose your situation > System Created

papertrail Dashboard Events Alerts Settings Help

Setup ZyXEL_Log...

System created.

ZyXEL_Log will log to **logs.papertrailapp.com**

I'm using...

- Unix & Linux
- Text files, Apache, MySQL, Docker & more
- BSD & OS X
- Windows
- Not shown here?

1 See which logger your system uses. Run:

```
ls -d /etc/*syslog*
```

Which filename is listed?

rsyslog.conf

Set Up the ZyWALL/USG Remote Server Setting

1. Go to **CONFIGURATION > Log & Report > Log Settings > Remote Server > Edit**. Set **Log Format** to be **CEF/Syslog**. Type the **Server Address** to be the Papertrail-provided domain name (logs.papertrailpp.com in this example).
2. Use the **System Log** drop-down list to change the log settings for all of the log categories.

CONFIGURATION > Log & Report > Log Settings > Remote Server > Edit

Log Settings for Remote Server

Active

Log Format: CEF/Syslog

Server Address: logs.papertrailpp.com (Server Name or IP Address)

Log Facility: Local 1

Active Log

Make sure your ZyWALL to WAN security policy allow traffic to log server.

Set Up the VRPT Server

1. The Vantage Report server must have register an account in <http://www.myZyXEL.com>.
2. Install VRPT software:
3. <http://www.zyxel.com/support/DownloadLandingSR.shtml?c=gb&l=en&kbid=M-01339&md=VRPT>
4. Unzipped the file and click **Vantage Reeport.exe** to start installing Vantage Report. Then, the Vantage Report installation wizard appears. Click **Next**.

5. Enter the port number you want Vantage Report to use for web services. Make sure this port number does not conflict with the other services in your network. Click **Next**.

6. Check if any applications also use port 3316 (TCP), 514 (UDP) or 8080 (UDP) by entering "netstat -a" into the command line. Uninstall them if any. Click **OK**.

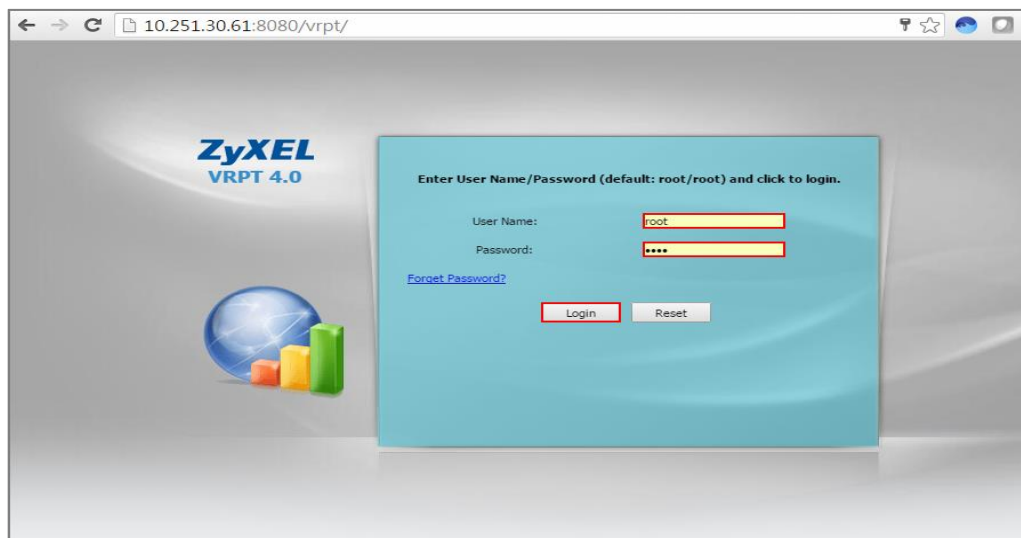

When you finish installing Vantage Report, restart the Vantage Report server.

7. Open the browser window and go to <http://a.b.c.d:xxxxxx/vrpt>, where **a.b.c.d** is the IP address of the Vantage Report server. If you open the configurator on the same computer on which you installed Vantage Report server, enter **localhost**.

Xxxx is the port number you entered during installation (10.251.30.61:8080/vrpt/ in this example).

In the login screen, enter default login **User Name** and **Password: root**.

8. Go to **Dashboard > License Information > Manage Device**, click **Add Device**, the **Add Device** screen appears on the left side. Enter the **Name** of the device you want to add to Vantage Report. Enter the LAN **MAC** address of the device you want to add. Select the model **Type** of the device you want to add. Click the **Add** button.

Dashboard > License Information > Manage Device

The screenshot shows the ZyXEL dashboard interface. On the left, there is a sidebar with a user profile for 'root' and 'usg110'. A red box highlights the 'Add Device' form, which includes fields for 'Name', 'MAC', 'Type' (set to 'ZyWALL 110'), and 'Note', along with an 'Add' button. The main dashboard area is titled 'Dashboard' and contains two panels: 'Server Information' and 'License Information'.

Make sure your ZyWALL to WAN security policy allow traffic to log server.

How to Setup and send logs to the USB storage

This example shows how to use the USB device to store the system log information.

ZyWALL/USG enable and send logs to the USB storage

 Note: Only connect one USB device. It must allow writing (it cannot be read-only) and use the FAT16, FAT32, EXT2, or EXT3 file system. This example was tested using USG110 (Firmware Version: ZLD 4.25).

Set Up the USB System Settings

Go to **CONFIGURATION > System > USB Storage > Settings > General**. Select **Activate USB storage service** if you want to use the connected USB device(s).

Set a number and select a unit (MB or %) to have the ZyWALL/USG send a warning message when the remaining USB storage space is less than the value you set here.

CONFIGURATION > System > USB Storage > Settings > General

General

Activate USB storage service

Disk full warning when remaining space is less than: MB

Set Up the USB Log Storage

Go to **CONFIGURATION > Log & Report > Log Settings**, select **USB Storage** and click **Activate**. Click **Apply** to save your changes.

CONFIGURATION > Log & Report > Log Settings

#	Status	Name	Log Format	Summary
1		System Log	Internal	E-mail Server 1 Mail Server: mail.zyxel.com.tw Mail Subject: Handbook test Send From: Chris.liao@zyxel.com.tw Send Log to: Chris.liao@zyxel.com.tw Send Alert to: Schedule: Send log daily at 10:00
2		System Log	Internal	E-mail Server 2 Mail Server: Mail Subject: Send From: Send Log to: Send Alert to: Schedule: Send log when full.
3		USB Storage	Internal	USB Status: Ready
4		Remote Server 1	VRPT/Syslog	Server Address: Log Facility: Local 1

6		Remote Server 3	VRPT/Syslog	Server Address: Log Facility: Local 1
7		Remote Server 4	VRPT/Syslog	Server Address: Log Facility: Local 1

Go to **CONFIGURATION > Log & Report > Log Settings > USB Storage > Edit**. Select **Duplicate logs to USB storage (if ready)** to have the ZyWALL/USG save a copy of its system logs to a connected USB storage device. Use the **Selection** drop-down list to change the log settings for all of the log categories.

Check the USG Log Files

Connect the USB to PC and you can find the files in the following path: \Model Name_dir\centralized_log\YYYY-MM-DD.log

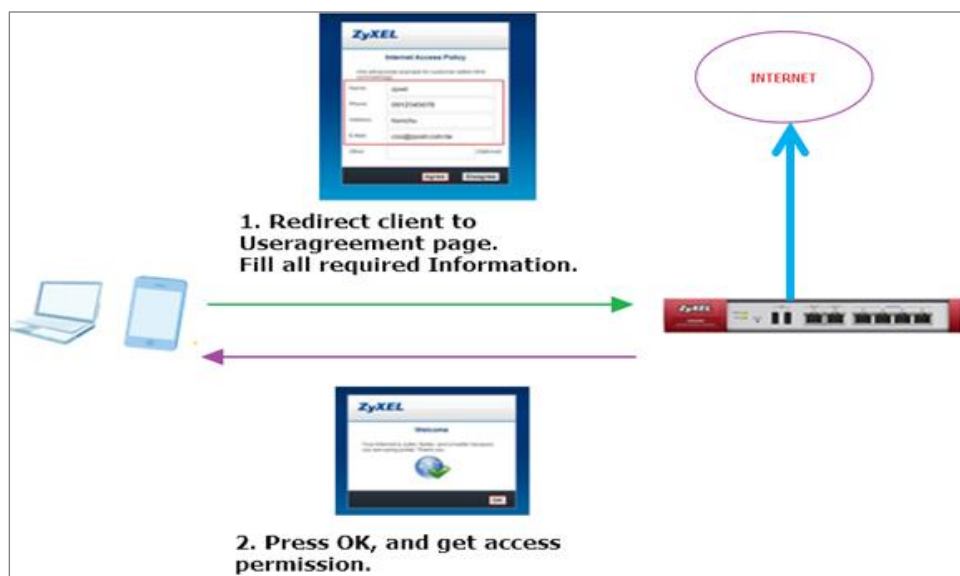

How to Activate a Free Access Hotspot

Some hotels need to provide free Internet services to hundreds of guests on a daily

basis, and managing the Internet access for so many people can be very complicated without the right equipment. With web authentication methods such as user agreement and web portal, hotel guests are redirected to a web-based authentication portal upon the first attempt to access the network. In some countries, the law requires the identification and tracking of users who use public Internet access. The USG1100 can authenticate people by forcing them to receive an authentication code via SMS on their phone. In this way, the USG1100 can authorize the user's Internet access via their mobile phone number and keep track of the device in case of illegal activities via the hotspot. Guests can get free access to the Internet in a matter of seconds simply by entering all required personal contact information and agreeing to the policy of user agreement. If a user that does not have a guest account wants to access the free Internet for a specified period of time, his or her mobile phone number must be entered to receive the guest account information by SMS.

User Agreement

Configuration Guide Network Conditions

- WAN: 10.251.31.112
- LAN 1: 192.168.1.1/255.255.255.0
- User's laptop: 192.168.1.33

Set up the Free Access Hotspot

Configurations on the USG1100

The user agreement of this feature allows clients to access the Internet without a guest account. An advertisement webpage is used as the first page when an authenticated user attempts to access the Internet.

1. On the USG1100, go to **Configuration > Web Authentication > General**. Select **Enable Web Authentication** and click **Add** in the **Web Authentication Policy Summary** section.

(1) Select **Enable Policy**.

(2) Select **Lan_Subnet_GE3**

(3) Select **default-user-agreement** as the **Authentication Type**.

(4) Click **OK** to add the policy.

Test the User Agreement and Advertisement Webpage

1. When a client attempts to access the Internet via a browser, he/she will be

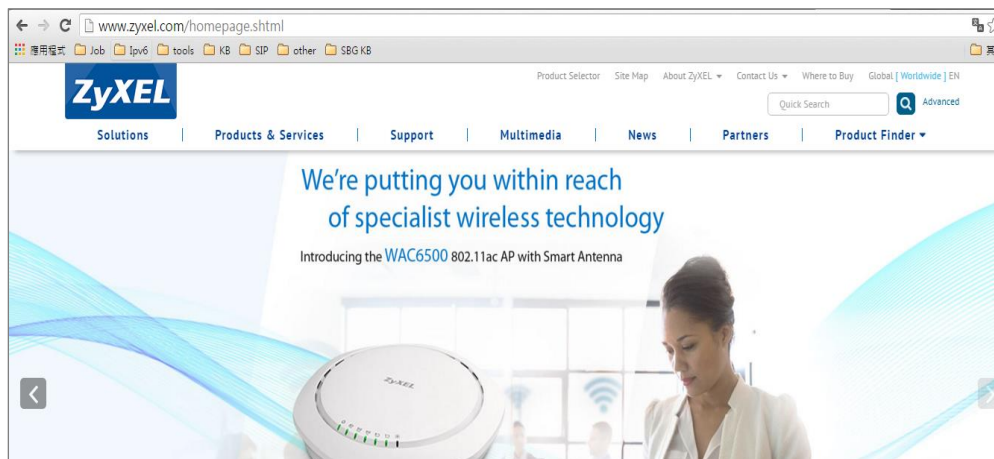

redirected to the user agreement page.

The screenshot shows the ZyXEL Internet Access Policy page. At the top is the ZyXEL logo. Below it is a link for "View Mobile Version". The main heading is "Internet Access Policy", followed by a note: "(We will provide example for customer within html comment tag)". A form with a red border contains the following fields: Name (Charlie), Phone (032235456), Address (13, mark St. Sang.TW), E-Mail (zyxel-a@gamil.com), and Other (Nothing) with an "(Optional)" label. At the bottom of the form are "Agree" and "Disagree" buttons.

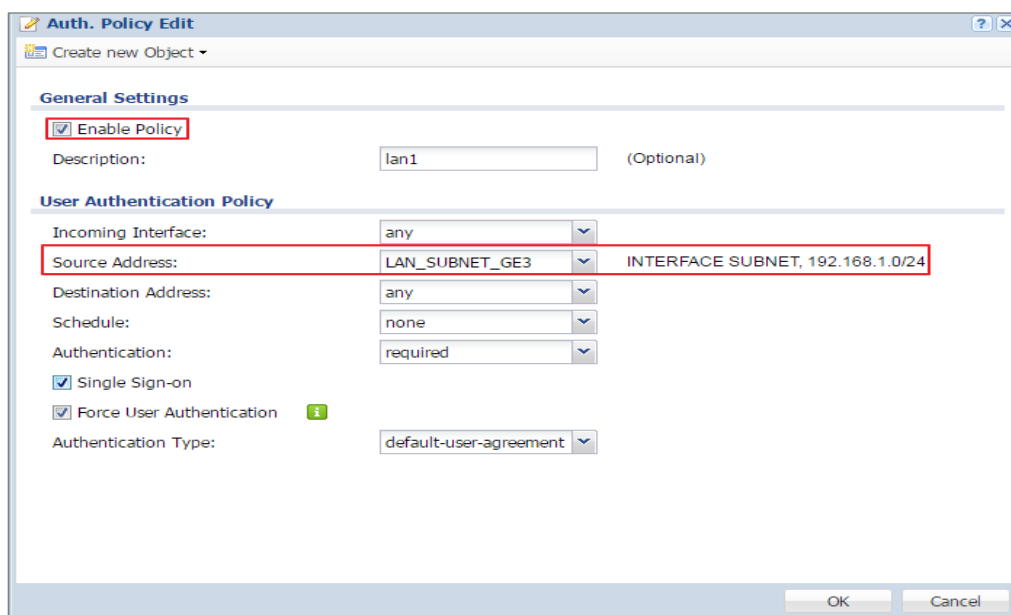

2. The advertisement webpage will be displayed in a new window and it is the first page that appears whenever the user connects to the Internet.

What could Go Wrong?

If users can access the internet without any Authentication, please make sure the Source Address is configured on the correct the subnet. For example, if you want users to be controlled via authentication in Subnet 192.168.1.0/24, you need to make sure the Source Address should be 192.168.1.0/24

Set up Enable the Free Time Feature

Configurations on the USG1100

On the USG1100, you need to enable the SMS service and select **SMS** as the delivery method in the **Free Time** feature.

1. Register for a ViaNett account at <http://www.vianett.com>.

2. Enter all the required information.

The image shows the registration form on the ViaNett website. The form is titled "Free demonstration account" and "Fill in to get a free account". It includes the following fields: "Your name:", "E-mail:", "Mobile number:" (with a "+" sign), "Company name:", "Country:", and "Enter code above:" (with a "FM7HS" code). A green "CREATE DEMO ACCOUNT" button is at the bottom. The form is highlighted with a red border. To the left of the form, there are bullet points listing benefits like "Free Registration" and "Send 5 SMS free of charge".

3. After the form has been submitted, the account information will be sent to your E-mail address.

6. After the ViaNett account is ready, go to the USG1100's **Configuration > Hotspot > SMS** screen.

(1) Enable SMS.

(2) Fill-in your local phone country code as the default country code.

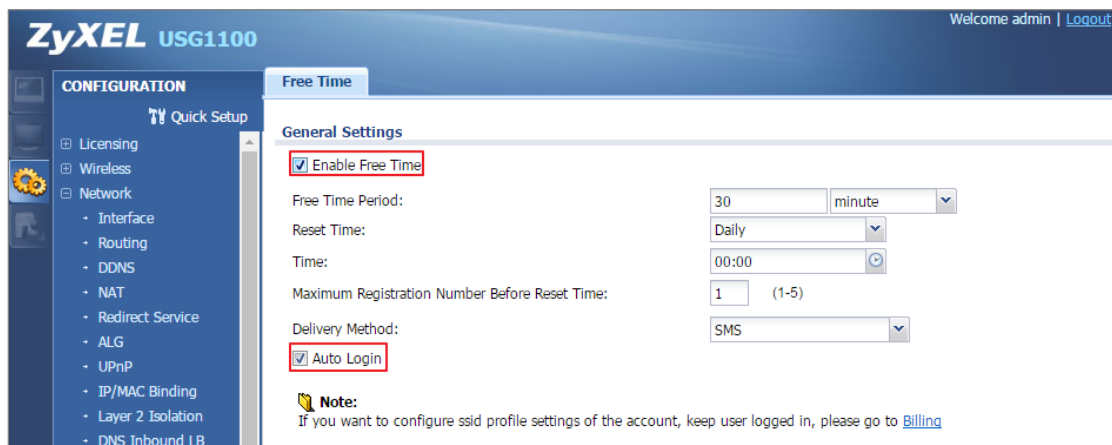

(3) Add authentication policy for every source.

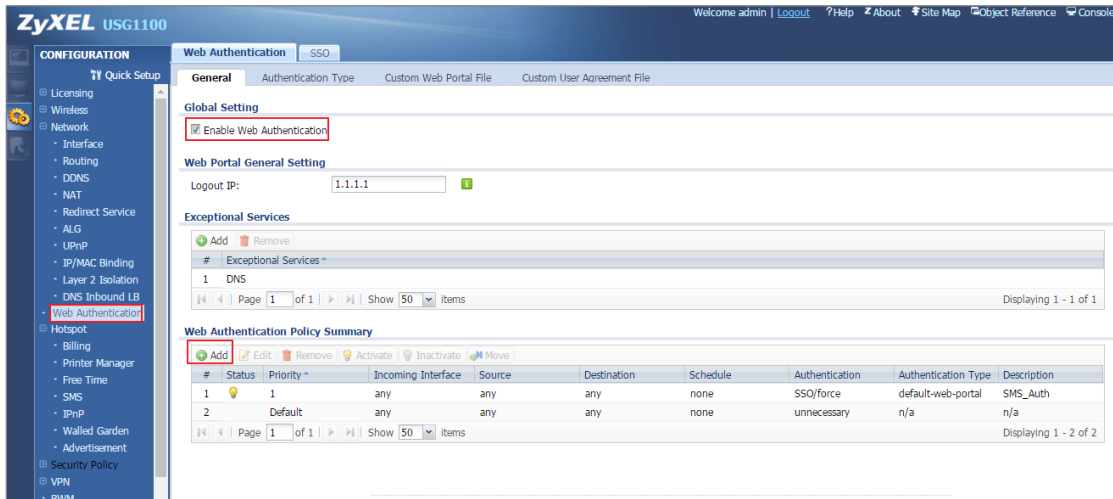

7. Go to **Configuration > Hotspot > Free Time**.

(1) Select **Enable Free Time** and set up the free time period. By default, the **Reset Time** is at AM 00:00. You can also set up how many times a MAC address can access the Internet.

(2) Select **SMS** as the method to deliver the login information to the mobile phone.

8. Go to **Configuration > Web Authentication**. Select **Enable Web Authentication** and click **Add** in the **Web Authentication Policy Summary** section.

9. Select **Enable Policy**, **Force User Authentication**, and then select **default-web-portal** as the **Authentication Type**.

Test Free Time Feature

1. The user will be redirected to the **Login** screen before he/she is permitted to access the Internet. Click on the link to get a free account.

The image shows the ZyXEL USG1100 login interface. On the left, there is the ZyXEL logo and the model number USG1100, along with a graphic of a globe and a shield. The main area is a light blue box with the heading "Enter User Name/Password and click to login." Below this heading are three input fields: "User Name:", "Password:", and "One-Time Password: (Optional)". A note below the fields states "(max. 63 alphanumeric, printable characters and no spaces)". A red box highlights a link that says "Without an account? Click here to get a free account.". At the bottom right of the box are two buttons: "Login" and "SSL VPN".

2. Select **Free Time** as the service plan. Then submit your country code and mobile phone number.

The image shows a "Welcome" dialog box with the instruction "Please choose the service plan from the following profile table." Below the instruction is a table with the following data:

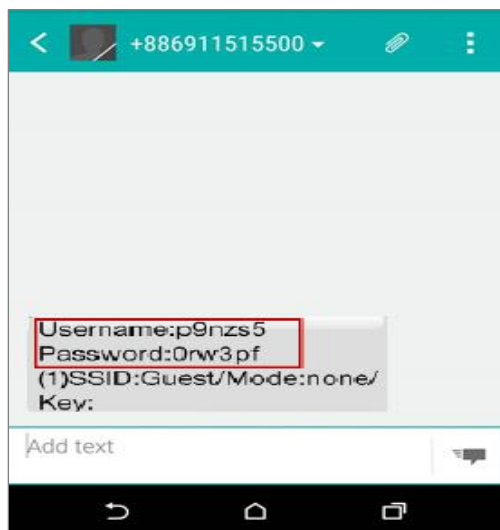

#	Service Name	Service Time	Charge	Unit
1	Free Time	30 minutes	Free	1
2	Billing_1_hour	1 hour	€ 1.00	1
3	Billing_2_hour	2 hours	€ 2.00	1
4	Billing_3_hour	3 hours	€ 3.00	1

Below the table are two input fields: "Country Code:" with the value "886" and "Mobile Number:" with the value "0912345678". An example text below the fields reads "Example: [886][0910123456](for Taiwan)". An "OK" button is located at the bottom right of the dialog.

3. The account and password will be sent to your mobile phone.

4. Check your account information.

5. Fill-in the account information received on your mobile phone and click **Login**.

The image shows the login interface for a ZyXEL USG1100 device. On the left, there is a logo for ZyXEL USG1100 and a graphic of a globe with a shield. The main area is a light blue box with the heading "Enter User Name/Password and click to login." Below this, there are three input fields: "User Name:" containing "p9nzs5", "Password:" containing "*****", and "One-Time Password:" which is empty and labeled "(Optional)". A note below the fields states "(max. 63 alphanumeric, printable characters and no spaces)" and provides a link: "Without an account? Click here to get a free account." At the bottom right of the box are two buttons: "Login" and "SSL VPN".

6. Now the client can start accessing the Internet.

The image shows the post-login interface for a ZyXEL USG1100 device. On the left, there is a logo for ZyXEL and a graphic of a globe with a shield. The main area is a light blue box with the heading "p9nzs5, You now have logged in." Below this, there is a label "Remaining time before lease timeout (dd, hh:mm:ss):" and a corresponding value "00 day, 00:29:52" displayed in a small white box.

What Can Go Wrong?

If client cannot get the SMS message from ViaNett, please make sure the Country code, Username and Password are all correct.

The image shows a screenshot of the ZyXEL USG1100 web management interface. The page title is "ZyXEL USG1100". On the left, there is a "CONFIGURATION" menu with a "Quick Setup" icon. The menu items are: Licensing, Wireless, Network (with sub-items: Interface, Routing, DDNS, NAT, Redirect Service, ALG, UPnP). The main content area is titled "SMS" and is divided into two sections: "General Settings" and "ViaNett Configuration".

General Settings

- Enable SMS
- Default country code for phone number: (1-4) digit

- Retype to Confirm:

How to Setup IPv6 Interfaces for Pure IPv6 Routing

This example shows how to configure your USG Z's WAN and LAN interfaces which connects two IPv6 networks. USG Z periodically advertises a network prefix of 2006:1111:1111:1111::/64 to the LAN through router advertisements.

ZyWALL/USG access the internet via IPv6

 **Note:**

Instead of using router advertisement, you can use DHCPv6 to pass the network settings to the computers on the LAN.

This example was tested using USG110 (Firmware Version: ZLD 4.25) and ZyWALL 310 (Firmware Version: ZLD 4.25).

Setting Up the IPv6 Interface

Wan

1. In the CONFIGURATION > Network > Interface > Ethernet screen's IPv6 Configuration section, double-click the wan1.
2. The Edit Ethernet screen appears. Select Enable Interface and Enable IPv6. Select Enable Auto-Configuration. Click OK.

Note: Your ISP or uplink router should enable router advertisement.

Set up the Prefix Delegation and Router Advertisement

This example shows how to configure prefix delegation on the ZyWALL's WAN and router advertisement on the LAN.

Apply a network Prefix From Your ISP

First of all, you have to apply a network prefix from your ISP or the uplink router's administrator. The WAN port's DUID is required when you apply the prefix. You can check the DUID information in the **WAN IPv6 Interface Edit** screen.

This example assumes that you were given a network prefix of 2001:b050:2d::/48 and you decide to divide it and give 2001:b050:2d:1111::/64 to the LAN network. LAN1's IP address is 2001:b050:2d:1111::1/128.

Setting Up the WAN IPv6 Interface

1. In the **Configuration > Network > Interface > Ethernet** screen's **IPv6 Configuration** section,
double-click the **WAN** interface.
2. The Edit Ethernet screen appears. Select **Enable Interface** and **Enable IPv6**.
Click **Create new Object** to add a DHCPv6 Request object with the **Prefix Delegation** type.
Select **Enable Auto-Configuration**.
Select **Client** in the DHCPv6 field. (WAN1's DUID appears.)

Click Add in the DHCPv6 Request Options table and select the DHCPv6 request object you just created. You cannot see the prefix your ISP gave you in the Value field until you click OK and then come back to this screen again. It is 2001:b050:2d::/48 in this example.

Note: Your ISP or a DHCPv6 server in the same network as the WAN should assign an IPv6 IP address for the WAN interface.

Setting Up the WAN IPv6 Interface

1. In the Configuration > Network > Interface > Ethernet screen, double-click the lan interface in the IPv6 Configuration section.
2. The Edit Ethernet screen appears. Click Show Advanced Settings to display more settings on this screen.

Select Enable Interface and Enable IPv6.

In the Address from DHCPv6 Prefix Delegation table, click Add and select the DHCPv6 request object from the drop-down list, type ::1111:0:0:0:1/128 in the Suffix Address field. (The combined address 2001:b050:2d:1111::1/128 will display as LAN1's IPv6 address after you click OK and come back to this screen again).

DHCPv6 Setting is **N/A**

Note: You can configure the IPv6 Address/Prefix Length field instead if the delegated prefix is never changed.

3. In the Advertised Prefix from DHCPv6 Prefix Delegation table, click Add and select the DHCPv6 request object from the drop-down list, type ::1111/64 in the Suffix Address field. (The combined prefix 2001:b050:2d:1111::/64 will display for the LAN1's network prefix after you click OK and come back to this screen again)., please note that this is the USG LAN interface IP.

1. Navigate to IPv6 Router Advertisement Setting, enable Router Advertisement, it would advertise the prefix to the Lan host, also enable Advertised Hosts Get Other Configuration From DHCPv6, Lan hosts will get the DNS address from USG.
2. Configure Advertised Prefix from DHCPv6 Prefix Delegation, the Lan hosts will get the Prefix from USG, Suffix address can set 0~F

IPv6 Router Advertisement Setting

Enable Router Advertisement

Advance

Advertised Hosts Get Network Configuration From DHCPv6

Advertised Hosts Get Other Configuration From DHCPv6

Router Preference:

Advance

MTU: (1280-1500, 0 is disabled)

Hop Limit: (0-255, 0 is disabled)

Advertised Prefix Table

#	IPv6 Address/Prefix Length
No data to display	

Advertised Prefix from DHCPv6 Prefix Delegation

#	Delegated Prefix	Suffix Address	Address
1	Prefix_WAN	::0/64	

Test

1. Connect a computer to the ZyWALL's LAN interface.
2. Enable IPv6 support on you computer.
 - In Windows XP, you need to use the IPv6 install command in a Command Prompt.
 - In Windows 7, IPv6 is supported by default. You can enable IPv6 in the Control Panel > Network and Sharing Center > Local Area Connection screen.
3. Your computer should get an IPv6 IP address (starting with 2001:b050:2d:1111: for this example) from the ZyWALL.

4. Open a web browser and type <http://www.kame.net>. If your IPv6 settings are correct, you can see a dancing turtle in the website.

What Can Go Wrong?

1. If you forgot to enable Auto-Configuration on the WAN1 IPv6 interface, you will not have any default route to forward the LAN's IPv6 packets.
2. To use prefix delegation, you must set the WAN interface to a DHCPv6 client, enable router advertisements on the LAN interface as well as configure the Advertised Prefix from DHCPv6 Prefix Delegation table.
3. If the Value field in the WAN1's DHCPv6 Request Options table displays n/a, contact your ISP for further support.
4. In Windows, some IPv6 related tunnels may be enabled by default such as Teredo and 6to4 tunnels. It may cause your computer to handle IPv6 packets in an unexpected way. It is recommended to disable those tunnels on your computer.

Assign the DNS address to the client

1. If you want to assign the DNS server address instead of ISP's , then please create the DNS server object.

Select DHCPv6 Lease and DNS server as lease type. For example set the Google DNS IPv6 address 2001:4860:4860::8888

Add Lease Object

Name:

Lease Type:

Advance

DNS Server:

User Defined Address:

OK Cancel

2. Select the drop-down list DHCPv6 as server type, add the DNS server object in DHCPv6 lease options and enable **Router Advertisement**.

IPv6 Router Advertisement Setting

Enable Router Advertisement

Advertised Hosts Get Network Configuration From DHCPv6

Advertised Hosts Get Other Configuration From DHCPv6

Router Preference:

How to Perform and Use the Packet Capture Feature on the ZyWALL/USG

This example shows how to use the Packet Capture feature to capture network traffic going through the ZyWALL/USG's interfaces. Studying these packet captures may help you identify network problems.

ZyWALL/USG Packet Capture Feature Settings

 Note: New capture files overwrite existing files of the same name. Change the File Suffix field's setting to avoid this. This example was tested using USG110 (Firmware Version: ZLD 4.25).

Set Up the Packet Capture Feature

- Go to **MAINTENANCE > Diagnostics > Packet Capture > Capture > Interfaces**. Select interfaces for which to capture packets and click the right arrow button to move them to the **Capture Interfaces** list.

9 Go to **MAINTENANCE > Diagnostics > Packet Capture > Capture > Filter**.

Select **IP Version** (IPv4 or IPv6) for which to capture packets or select **any** to capture packets for all IP versions.

Select the **Protocol Type** of traffic for which to capture packets. Select **any** to capture packets for all types of traffic.

Select a **Host IP** address object for which to capture packets. Select **any** to capture packets for all hosts. Select **User Defined** to be able to enter an IP address.

10 Go to **MAINTENANCE > Diagnostics > Packet Capture > Capture > Misc setting**.

Select **Continuously capture and overwrite old ones** to have the ZyWALL/USG keep capturing traffic and overwriting old packet capture entries when the available storage space runs out. Select **Save data to onboard storage only** or **Save data to USB storage** (If status shows service deactivated, go to **CONFIGURATION > Object > USB Storage**, select Activate USB storage service)

Misc setting

Continuously capture and overwrite old ones

Save data to onboard storage only (available: 65 MB)

Save data to USB storage (available: 895 MB)

Captured Packet Files: MB

Split threshold: MB

Duration: (0: unlimited)

File Suffix:

Number Of Bytes To Capture (Per Packet): Bytes

11 Click **Capture**.

How to Automatically Reboot the ZyWALL/USG by Schedule

This example shows how to use shell script and schedule run to reboot device automatically for maintenance purpose.

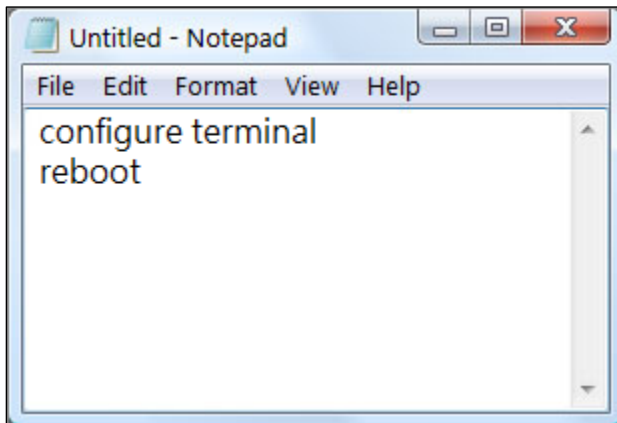

ZyWALL/USG Auto Schedule Reboot Settings

 Note: This example was tested using USG110 (Firmware Version: ZLD 4.25).

Set Up the Shell Script

- 1 Run Windows Notepad application and input below command:

- 2 Save this file as "reboot_device.zysh"

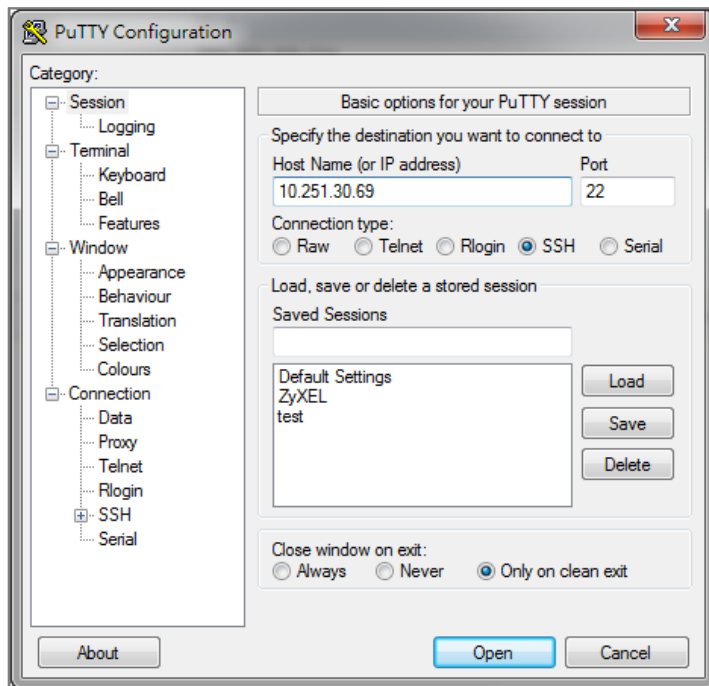

- 3 In the ZyWALL/USG, go to **MAINTENANCE > File Manager > Shell Script**. Click **Browse...** to find the reboot_device.zysh file. Click **Upload** to begin the upload process.

Set Up the Schedule Run

- 1 Login the device via console/telnet/SSH (using PuTTY in this example)

2 Issuing below commands based on three different (daily, weekly and monthly) user scenarios:

a. Router(config)# schedule-run 1 reboot_device.zysh daily 10:00

(The device will reboot at 10:00 everyday)

b. Router(config)# schedule-run 1 reboot_device.zysh weekly 10:00 sun

(The device will reboot at 10:00 every Sunday)

```
10.251.30.69 - PuTTY
login as: admin
Using keyboard-interactive authentication.
Password:
Router> configure terminal
Router(config)# schedule-run 1 reboot_device.zysh weekly 10:00 sun
Router(config)#
```

- c. Router(config)# schedule-run 1 reboot_device.zysh monthly 10:00 23
(The device will reboot at 10:00 every month on 23th)

```
10.251.30.69 - PuTTY
login as: admin
Using keyboard-interactive authentication.
Password:
Router> configure terminal
Router(config)# schedule-run 1 reboot_device.zysh monthly 10:00 23
Router(config)#
```

Check the Reboot Status

- 3 Login the device via console/telnet/SSH, the reboot runs as scheduled

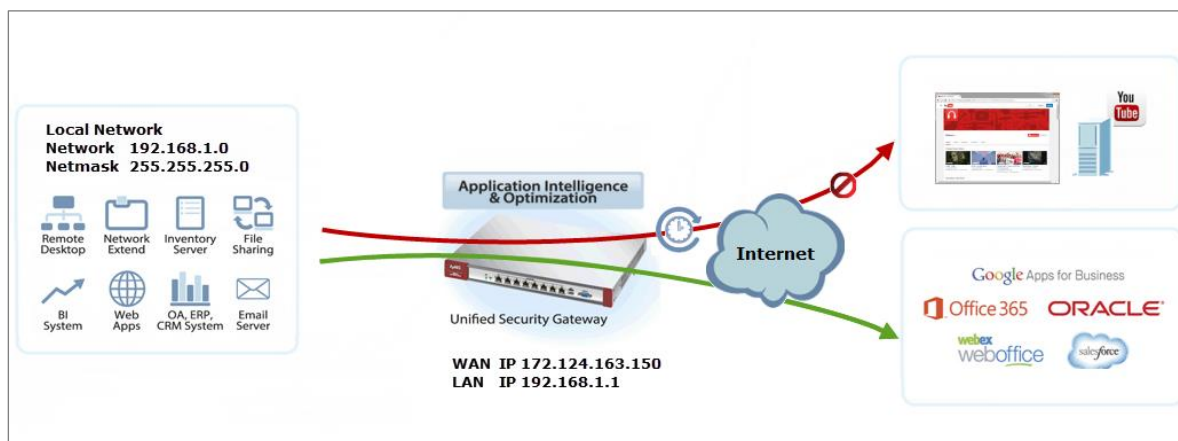

- 4 Go to **Configuration > System > Date/Time**, check **Current Date/Time**.

Figure Configuration > System > Date/Time

Date/Time	
Current Time and Date	
Current Time:	13:47:47 UTC+08:00
Current Date:	2017-06-29

How To Schedule YouTube Access

This is an example of using the ZyWALL/USG UTM Profile and Security Policy to control access to the network. If an application should not have network access during certain hours, you can use Application Patrol, SSL Inspection and Schedule settings to make sure that these applications cannot access the Internet.

ZyWALL/USG with Scheduled YouTube Access Settings Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the Schedule on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Object > Schedule > Recurring > Add Schedule Recurring Rule**. Configure a **Name** for you to identify the **Schedule Recurring Rule**. Specify the **Day Time** hour and minute when the schedule begins and ends each day. In the **Weekly** schedule, select each day of the week that the recurring schedule is effective.

CONFIGURATION > Object > Schedule > Recurring

Add Schedule Recurring Rule

Configuration

Name:

Day Time

Start Time:

Stop Time:

Weekly

Week Days: Monday Tuesday Wednesday
 Thursday Friday Saturday
 Sunday

Create the Application Objects on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Object > Application > Add Application Rule**. Configure a **Name** for you to identify the **Application Profile**. Then, click **Add** to create an **Application Object**.

CONFIGURATION > Object > Application > Add Application Rule

In the **Application Object**, select **By Service**, type a keyword and click **Search** to display all signatures containing that keyword. Check all **Query Result** and Click **OK**.

CONFIGURATION > Object > Application > Add Application Rule > Add Application Object

Set Up SSL Inspection on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > UTM Profile > SSL Inspection > Add**

rule, configure a **Name** for you to identify the **SSL Inspection** profile.

Then, select the **CA Certificate** to be the certificate used in this profile. Select **Block** to **Action for Connection with SSL v3** and select **Log** type to be **log alert**. Leave other actions as default settings.

CONFIGURATION > UTM Profile > SSL Inspection > Add rule

General Settings			
Name:	Youtube_Profile		
Description:			
CA Certificate:	default		
SSL/TLS version supported minimum:	ssl3	Log:	log alert
Action for connection with unsupported suit:	pass	Log:	no
Action for connection with untrusted cert chain:	pass	Log:	log

Set Up the Security Policy on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Security Policy > Policy Control**, configure a **Name** for you to identify the **Security Policy** profile. For **From** and **To** policies, select the direction of travel of packets to which the policy applies. Select the **Schedule** that defines when the policy applies (Youtube_Schedule in this example).

Scroll down to **UTM Profile**, check **Application Patrol** and select a profile from the list box (Youtube_profile in this example). Then, check **SSL Inspection** and select a profile from the list box (Youtube in this example).

CONFIGURATION > Security Policy > Policy Control

<input checked="" type="checkbox"/> Enable		
Name:	Youtube_Schedule	
Description:		(Optional)
From:	LAN1	
To:	any (Excluding zyx)	
Source:	any	
Destination:	any	
Service:	any	
User:	any	
Schedule:	Youtebe_Schedule	
Action:	allow	
Log matched traffic:	no	

UTM Profile				
<input type="checkbox"/>	Content Filter:	none	Log:	by profile
<input checked="" type="checkbox"/>	SSL Inspection:	Youtube_Profile	Log:	by profile

Export Certificate from ZyWALL/USG and Import it to Windows 7 Operation System

When SSL inspection is enabled and an access website does not trust the ZyWALL/USG certificate, the browser will display a warning page of security certificate problems.

Go to ZyWALL/USG **CONFIGURATION > Object > Certificate > default > Edit** to export default certificate from ZyWALL/USG with Private Key (zyx123 in this example).

CONFIGURATION > Object > Certificate > default

My Certificates Setting						
#	Name	Type	Subject	Issuer	Valid From	Valid To

NDIz
```

Password: [REDACTED]

Export Certificate Only **Export Certificate with Private Key**

OK **Cancel**

Save default certificate as *.p12 file to Windows 7 Operation System.

default.p12

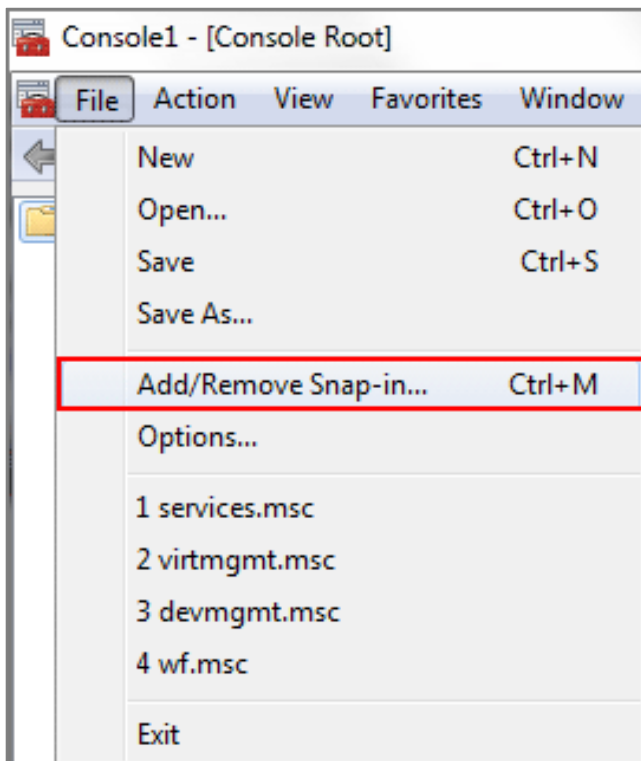

In Windows 7 Operating System **Start Menu > Search Box**, type **mmc** and press **Enter**.

Start Menu > Search Box > mmc

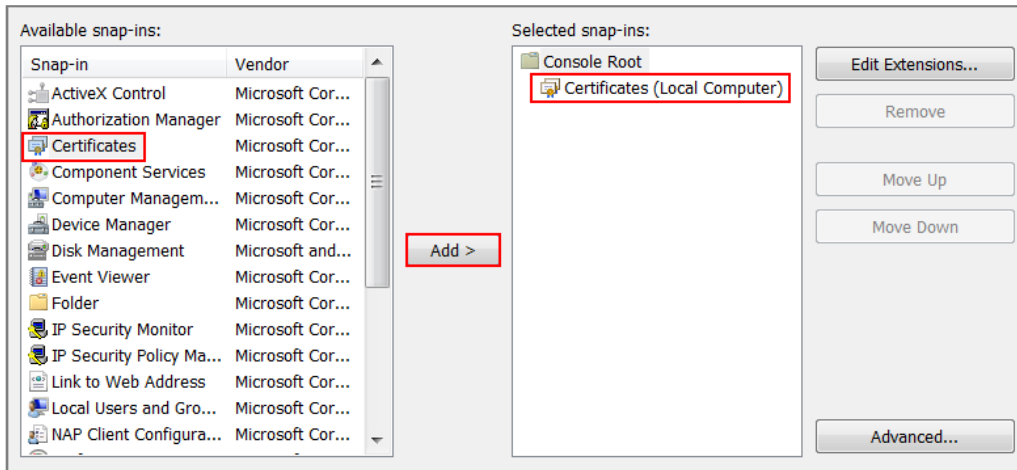

In the mmc console window, click **File > Add/Remove Snap-in...**

File > Add/Remove Snap-in...

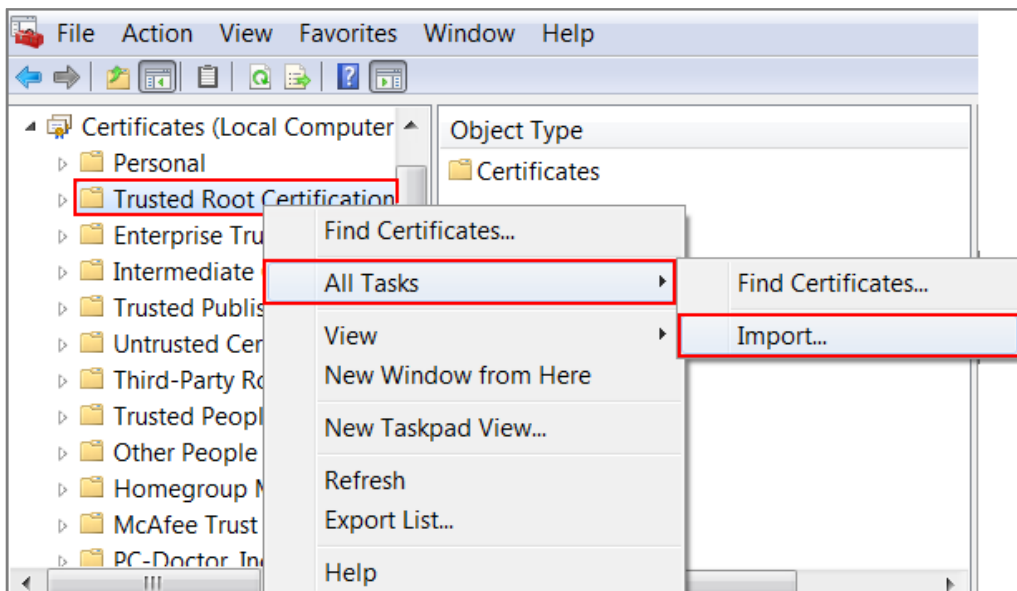

In the **Available snap-ins**, select the **Certificates** and click **Add** button. Select **Computer account > Local Computer**. Then, click **Finished** and **OK** to close the **Snap-ins** window.

Available snap-ins > Certificates > Add

In the mmc console window, open the **Certificates (Local Computer) > Trusted Root Certification Authorities**, right click **Certificate > All Tasks > Import...**

Click **Next**, Then, **Browse...**, and locate the .p12 file you downloaded earlier. Then, click **Next**.

File to Import
Specify the file you want to import.

File name:
C:\Users\Desktop\default.p12

Note: More than one certificate can be stored in a single file in the following formats:

- Personal Information Exchange- PKCS #12 (.PFX,.P12)
- Cryptographic Message Syntax Standard- PKCS #7 Certificates (.P7B)
- Microsoft Serialized Certificate Store (.SST)

Click **Next**, type **zyx123** in the **Password** field and click **Next** again

Password
To maintain security, the private key was protected with a password.

Type the password for the private key.

Password:

Enable strong private key protection. You will be prompted every time the private key is used by an application if you enable this option.

Mark this key as exportable. This will allow you to back up or transport your keys at a later time.

Include all extended properties.

Select **Place all certificates in the following store** and then click **Browse** and find **Trusted Root Certification Authorities**. Click **Next**, then click **Finish**.

Certificate Store

Certificate stores are system areas where certificates are kept.

Windows can automatically select a certificate store, or you can specify a location for the certificate.

Automatically select the certificate store based on the type of certificate

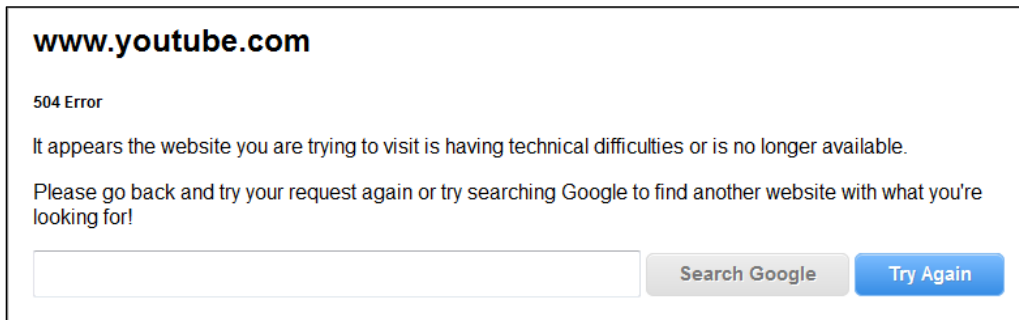

Place all certificates in the following store

Certificate store:

 Note: Each ZyWALL/USG device has its own self-signed certificate by factory default. When you reset to the default configuration file, the original self-signed certificate is erased, and a new self-signed certificate will be created when the ZyWALL/USG boots the next time.

Test the Result

Type <http://www.youtube.com/> or <https://www.youtube.com/> into the browser.
An error message occurs.

Go to the ZyWALL/USG **Monitor > Log**, you will see [alert] log message such as below.

Priority	Category	Message	Note
alert	Application Patrol	Rule_id=1 SSI=Y App=[Streaming Media]Youtube:access Action=reject SID=67137542	ACCESS BLOCK
alert	Application Patrol	Rule_id=1 SSI=Y App=[Streaming Media]Youtube:access Action=reject SID=67137542	ACCESS BLOCK

What Could Go Wrong?

If you are not be able to configure any **Application Patrol** policies or it's not working, there are two possible reasons:

- You have not subscribed for the **Application Patrol** service.

- You have subscribed for the **Application Patrol** service but the license is expired.

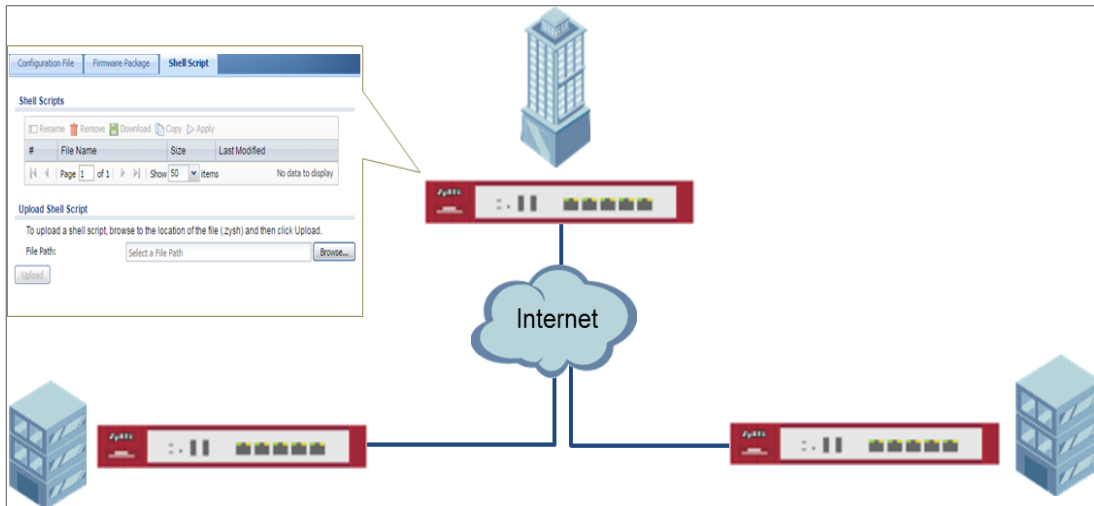

You can click the link from the **CONFIGURATION > Licensing > Registration** screen of your ZyXEL device's Web Configurator or click the myZyXEL.com 2.0 icon from

the portal page (<https://portal.myzyxel.com/>) to register or extend your **Application Patrol** license.

After you apply the **Application Patrol** service, the running session will continue till it's finished.

How to continuously run a ZySH script

This example shows how to use shell script and continuously run a ZySH script automatically for maintenance purpose.

ZyWALL/USG continuously run a ZySH script Settings

 Note: This example was tested using USG110 (Firmware Version: ZLD 4.25).

Set Up the Shell Script

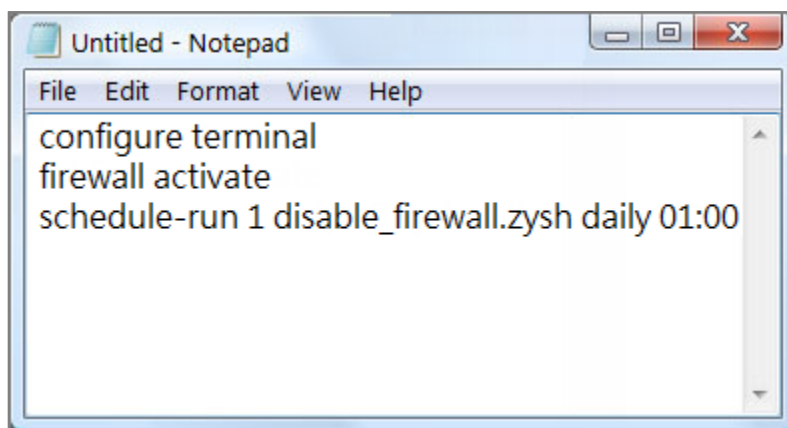

- 1 Run Windows Notepad application and input below command:

```
File Edit Format View Help
configure terminal
no firewall activate
schedule-run 1 enable_firewall.zysh daily 02:00
```

- 2 Save this file as "disable_firewall.zysh"

- 3 Run Windows Notepad application and input below command:

- 4 Save this file as "enable_firewall.zysh"

- 5 In the ZyWALL/USG, go to **MAINTENANCE > File Manager > Shell Script**. Click **Browse...** to find the disable_firewall.zysh and enable_firewall.zysh file. Click **Upload** to begin the upload process.

Shell Scripts

Rename Remove Download Copy Apply

File Name	Size	Last Modified
enable_firewall.zysh	3	2017-06-29 14:48:25
disable_firewall.zysh	3	2017-06-29 14:48:13

Page 1 of 1 Show 50 items Displaying 1 - 2 of 2

Upload Shell Script

To upload a shell script, browse to the location of the file (.zysh) and then click Upload.

File Path:

Set Up the Schedule Run

6 Issuing below commands:

Router> configure terminal

Router(config)# schedule-run 1 disable_firewall.zysh daily 15:15

```

10.214.30.87:22 - Tera Term VT
File Edit Setup Control Window Help
Router(config)# schedule-run 2 disable_firewall.zysh daily 15:15
Router(config)# write
Router(config)# reboot
    
```

Check the Result

1 In the ZyWALL/USG, go to **DASHBOARD**.

DASHBOARD

System Uptime	Current Date/Time
00:02:48	2017-06-29 / 15:15:26 UTC+08:00

How To Register Your Device and Services at myZyXEL.com

myZyXEL.com is ZyXEL's online services center where you can register your ZyXEL device and manage subscription services available for the device. To update signature files or use a subscription service, you have to register the device and activate the corresponding service at myZyXEL.com.

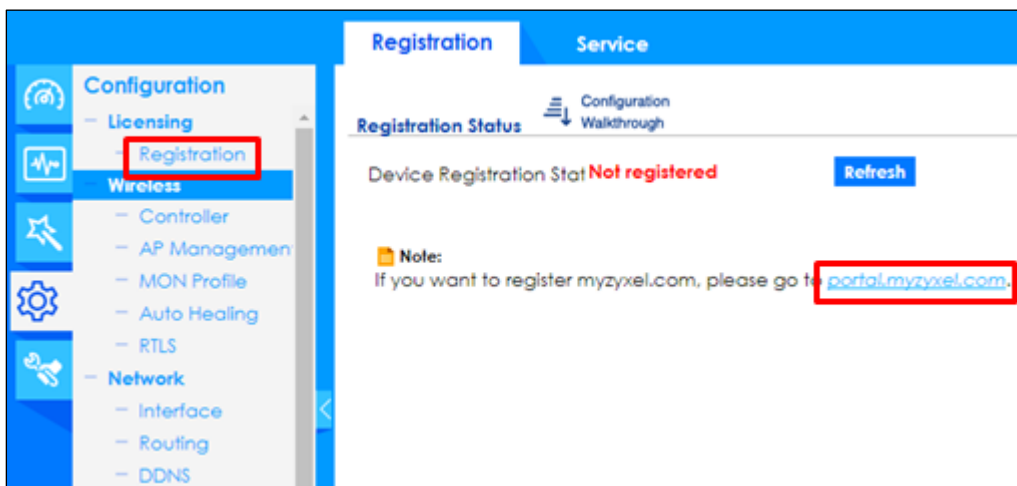

MyZyXEL.com 2.0 Management Architecture

Account Creation

After you click the link from the **Registration** screen of your ZyXEL device's Web Configurator or click **the myZyXEL.com 2.0** icon from the portal page (<https://portal.myzyxel.com/>), the **Sign In** screen displays.

CONFIGURATION > Licensing > Registration

Click **Not a Member Yet** to open the **Sign Up** screen where you can create an account.

myZyXEL.com > Not a Member Yet

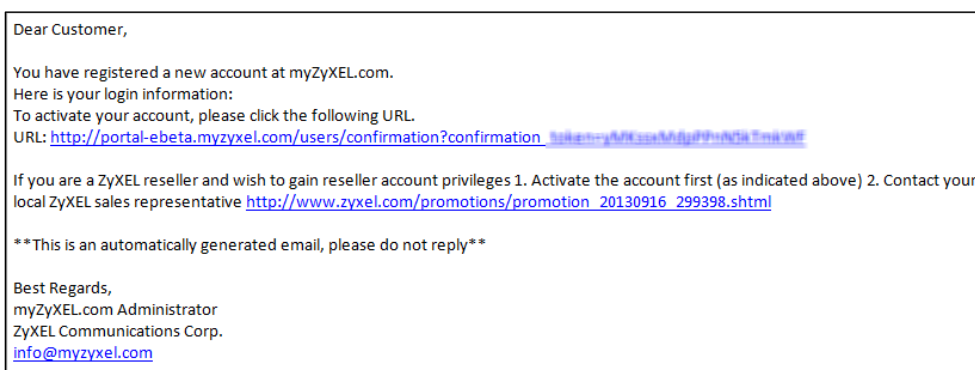

Select Registration Type to create an Individual account or a Business account. Individual account is for non-commercial, end user of ZyXEL products. Business account is for commercial users; VAT # is required (the requirement varies in selection of different countries)

myZyXEL.com > Not a Member Yet > Sign-up

 Note: The business account can be changed into a channel partner account by an administrator. With a channel partner account, you can register multiple devices and/or services at a time and check service status reports. Contact your sales representative to have a channel partner account.

After you click **Submit**, myZyXEL.com 2.0 will send you an account activation notification e-mail. Click the URL link from the e-mail to activate your account and log into myZyXEL.com 2.0.

After E-mail activate, sign in myZyXEL.com 2.0 to register or manage your devices and services. If you are a business account, please go to account page and press the **Reseller Request** button.

Device Registration

Click **Device Registration** in the navigation panel to open the screen. Use this screen to register your device with myZyXEL.com.

Enter the device's (first) **MAC Address** and **Serial Number**, which can be found on the sticker on the back of the device. Click **Submit**.

If you access myZyXEL.com from the **Registration** screen of your ZyXEL device's Web Configurator, the device **MAC Address** and **Serial Number** displays automatically.

myZyXEL.com

How To Exempt Specific Users From Security Control

This is an example of using a ZyWALL/USG Security Policy to exempt three corporate executives from security control, while controlling Internet access for other employees' accounts.

Exempt Specific Users from Security Control Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the Security Policy on the ZyWALL/USG for Employees

In the ZyWALL/USG, go to **CONFIGURATION > Object > Address > Add Address Rule** to create address range for employees.

CONFIGURATION > Object > Address > Add Address Rule

+ Add Address Rule

Name: Employees

Address Type: RANGE

Starting IP Address: 192.168.20.1

End IP Address: 192.168.30.255

OK Cancel

Set up **Security Policy** for employees, go to **CONFIGURATION > Security Policy > Policy Control > Add corresponding**, configure a **Name** for you to identify the employees' **Security Policy** profile.

For **From** and **To** policies, select the direction of travel of packets to which the policy applies. Select **Source** to be the **Employees** to apply the policy to all traffic coming from them. In order to view the test result later on, set **Log matched traffic** to be **log**.

Scroll down to **UTM Profile**, select the general policy that allows employees to access the Internet. (Using built-in Office profile in this example blocks the non-productive services, such as Advertisement & Pop-Ups, Gambling and Peer to Peer services...etc.).

CONFIGURATION > Security Policy > Policy Control > Add corresponding > Employees_Security

<input checked="" type="checkbox"/> Enable	
Name:	Employees_Security
Description:	<input type="text"/> (Optional)
From:	LAN
To:	any (Excluding ZyV)
Source:	Employees
Destination:	any
Service:	any
User:	any
Schedule:	none
Action:	allow
Log matched traffic:	log

UTM Profile	
<input checked="" type="checkbox"/> Content Filter:	Office_profile
<input type="checkbox"/> SSL Inspection:	none

Set Up the Security Policy on the ZyWALL/USG for Executives

In the ZyWALL/USG, go to **CONFIGURATION > Object > User/Group > Add A User** to create **User Name/Password** for each executive.

CONFIGURATION > Object > User/Group > Add A User

User Configuration

User Name :	<input type="text" value="Executive_1"/>
User Type:	<input type="text" value="user"/>
Password:	<input type="password" value="****"/>
Retype:	<input type="password" value="****"/>
Description:	<input type="text" value="Local User"/>

User Configuration

User Name :	<input type="text" value="Executive_2"/>
User Type:	<input type="text" value="user"/>
Password:	<input type="password" value="****"/>
Retype:	<input type="password" value="****"/>
Description:	<input type="text" value="Local User"/>

User Configuration

User Name :	<input type="text" value="Executive_3"/>
User Type:	<input type="text" value="user"/>
Password:	<input type="password" value="****"/>
Retype:	<input type="password" value="****"/>
Description:	<input type="text" value="Local User"/>

Then, go to **CONFIGURATION > Object > User/Group > Group > Add Group** to create a **Group Members' Name** and move the just created executives user object to **Member**.

CONFIGURATION > Object > Address Group > Add Address Group Rule

Configuration

Name:

Description: (Optional)

Member List

Available	Member
<p>=== Object ===</p> <p>Executive_1</p> <p>Executive_2</p> <p>Executive_3</p> <p>ad-users</p> <p>ldap-users</p> <p>radius-users</p>	

Set up **Security Policy** for executives, go to **CONFIGURATION > Security Policy > Policy Control > Add corresponding**, configure a **Name** for you to identify the executives' **Security Policy** profile.

For **From** and **To** policies, select the direction of travel of packets to which the policy applies. Select **User** to be the **Executives** to apply the policy to all traffic coming from them.

In order to view the test result later on, set **Log matched traffic** to be **log**.

Leave all **UTM Profiles** disabled.

CONFIGURATION > Security Policy > Policy Control > Add corresponding > Employees_Security

Enable

Name: Executive_Security

Description: (Optional)

From: LAN

To: any (Excluding ZyV

Source: any

Destination: any

Service: any

User: Executive

Schedule: none

Action: allow

Log matched traffic: log

[UTM Profile](#)

Test the Result

Connect to the Internet from two computers: one from executive_1 and one from an employee address (192.168.30.9).

Go to the ZyWALL/USG **Monitor > Log**, you will see [notice] log message such as below. In this example result, a connection from executive_1 has user login message and always with **ACCESS FORWARD** information. A connection from employee address (192.168.30.9) and some of the services are with **ACCESS BLOCK** information

Monitor > Log

Priority	Category	Message	Source	Destination	Note

What Could Go Wrong?

If you are not be able to configure any **UTM** policies or it's not working, there are two possible reasons:

You have not subscribed for the **UTM** service.

You have subscribed for the **UTM** service but the license is expired.

You can click the link from the **CONFIGURATION > Licensing > Registration** screen of your ZyXEL device's Web Configurator or click the myZyXEL.com 2.0 icon from the portal page (<https://portal.myzyxel.com/>) to register or extend your **UTM** license.

How To Detect and Prevent TCP Port Scanning with ADP

This is an example of using a ZyWALL/USG ADP (Anomaly Detection and Prevention) Profile to protect against anomalies based on violations of protocol standards (RFCs – Requests for Comments) and abnormal traffic flows such as port scans.

ZyWALL/USG with ADP Profile Setting Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the ADP Profile on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Security Policy > ADP > Profile**, click the **Add** icon. A pop-up screen will appear allowing you to choose a base profile. Select a base profile to go to the profile details screen.

CONFIGURATION > Security Policy > ADP > Profile > Base Profile

The **Traffic Anomaly** screen will display. A **Name** is automatically generated that you can edit. Enable or disable individual scan or flood types by selecting a row and clicking **Activate** or **Inactivate**.

In the **Scan Detection** section, selecting levels in the **Sensitivity** drop-down menu and set **Block Period** for the duration applies blocking to the source IP address.

In the **Flood Detection** section, set **Block Period** for the duration applies blocking to the destination IP address. Set a **Threshold** number (the number of packets per second that match the flood detection criteria) for your network. Click **OK**.

CONFIGURATION > Security Policy > ADP > Profile > Base Profile > Traffic Anomaly

General

Name:

Description:

Scan Detection

Sensitivity:

Block Period: (1-3600 seconds)

#	Status	Name ^	Log	Action
1		(portscan) IP Protocol Scan	no	none
2		(portscan) TCP Portscan	no	none
3		(portscan) UDP Portscan	no	none
4		(sweep) ICMP Sweep	no	none
5		(sweep) IP Protocol Sweep	no	none
6		(sweep) TCP Port Sweep	no	none
7		(sweep) UDP Port Sweep	no	none

Page 1 of 1 | Show 50 items | Displaying 1 - 7 of 7

Flood Detection

Block Period: (1-3600 seconds)

#	Status	Name ^	Log	Action	Threshold(p...
1		(flood) ICMP Flood	no	none	<input type="text" value="1000"/>
2		(flood) IP Flood	no	none	1000
3		(flood) TCP Flood	no	none	1000
4		(flood) UDP Flood	no	none	1000

Page 1 of 1 | Show 50 items | Displaying 1 - 4 of 4

Click the **Protocol Anomaly** tab. A **Name** is automatically generated that you can edit. Enable or disable individual rules by selecting a row and clicking **Activate** or **Inactivate**. Edit the default log options and actions by selecting a row and making a selection in the **Log** or **Action** drop-down menus. Click **OK**.

CONFIGURATION > Security Policy > ADP > Profile > Base Profile > Protocol Anomaly

warn	ADP	from Any to ZyWALL, [type=Scan-Detection(8910011)] tcp-portscan-syn tcp-portscan-syn Action: Block Severity: medium	192.168.123.33:40347	172.124.163.150:15003	ACCESS BLOCK

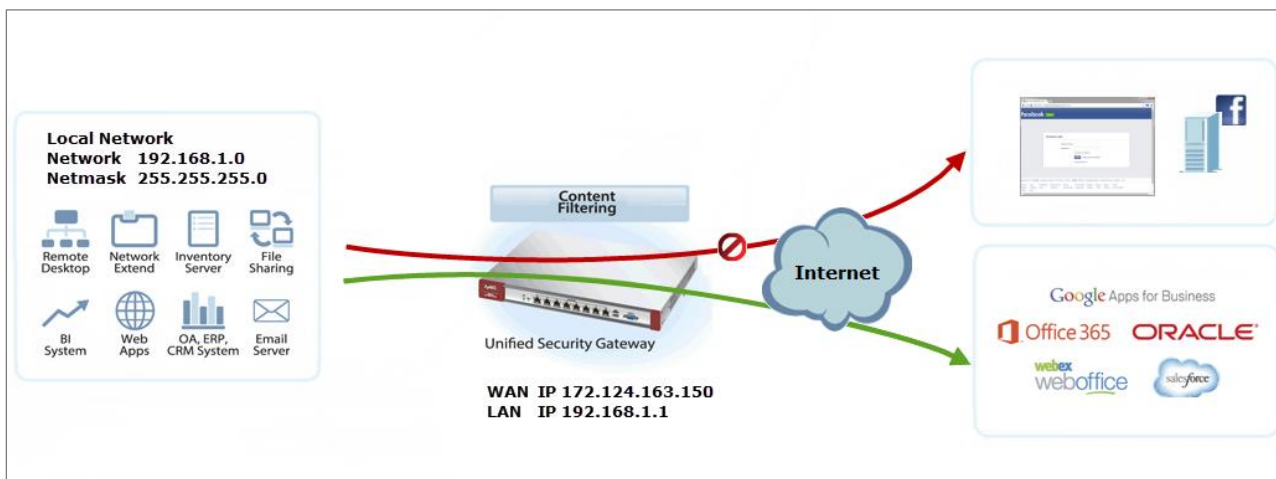

What Could Go Wrong?

You may find that certain rules are triggering too many false positives or false negatives. A false positive is when valid traffic is flagged as an attack. A false negative is when invalid traffic is wrongly allowed to pass through the ZyWALL/USG. As each network is different, false positives and false negatives are common on initial ADP deployment. You could create a new 'monitor profile' that creates logs but all actions are disabled. Observe the logs over time and try to eliminate the causes of the false alarms. When you're satisfied that they have been reduced to an acceptable level, you could then create an 'inline profile' whereby you configure appropriate actions to be taken when a packet matches a detection.

How To Block Facebook

This is an example of using a ZyWALL/USG UTM Profile in a Security Policy to block access to a specific social network service. You can use Content Filter, SSL Inspection and Policy Control to make sure that a certain web page cannot be accessed through both HTTP and HTTPS protocols.

ZyWALL/USG with Block Facebook Settings Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the Content Filter on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > UTM Profile > Content Filter > Profile Management > Add Filter File > Custom Service**. Configure a **Name** for you to identify the **Content Filter Profile** and select **Enable Custom Service**.

CONFIGURATION > UTM Profile > Content Filter > Profile > Profile Management > Add Filter File > Custom Service > General Settings

General Settings

Name:

Description: (Optional)

Enable Custom Service

Allow web traffic for trusted web sites only

Check Common Trusted/Forbidden List

Scroll down to the **Blocked URL Keywords** section, click **Add** and use "*" as a wildcard to match any string in trusted/forbidden web sites and blocked URL keywords (*.facebook*.com in this example). Click **OK**.

CONFIGURATION > UTM Profile > Content Filter > Profile > Profile Management > Add Filter File > Custom Service > Blocked URL Keywords

Blocked URL Keywords

#	Blocked URL Keywords	Action
1	*.facebook*.com	

Page 0 of 0 | Show 50 items | No data to display

Set Up the SSL Inspection on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > UTM Profile > SSL Inspection > Add rule**, configure a **Name** for you to identify the **SSL Inspection** profile.

Then, select the **CA Certificate** to be the certificate used in this profile. Select **Block** to **Action for Connection with SSL v3** and select **Log** type to be **log alert**. Leave

other actions as default settings.

CONFIGURATION > UTM Profile > SSL Inspection > Add rule

General Settings			
Name:	<input type="text" value="Facebook_Block"/>		
Description:	<input type="text"/>		
CA Certificate:	<input type="text" value="default"/>		
SSL/TLS version supported minimum:	<input type="text" value="ssl3"/>	Log:	<input type="text" value="no"/>
Action for connection with unsupported suit:	<input type="text" value="pass"/>	Log:	<input type="text" value="no"/>
Action for connection with untrusted cert chain:	<input type="text" value="pass"/>	Log:	<input type="text" value="log"/>

Set Up the Security Policy on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Security Policy > Policy Control**, configure a **Name** for you to identify the **Security Policy** profile. For **From** and **To** policies, select the direction of travel of packets to which the policy applies. Select the **Schedule** that defines when the policy applies (Facebook_Block in this example).

Scroll down to **UTM Profile**, select **Content Filter** and select a profile from the list box (Facebook_Block in this example). Then, select **SSL Inspection** and select a profile from the list box (Facebook_Block in this example).

CONFIGURATION > Security Policy > Policy Control

<input checked="" type="checkbox"/> Enable

Password:

Save default certificate as *.p12 file to Windows 7 Operation System.

default.p12

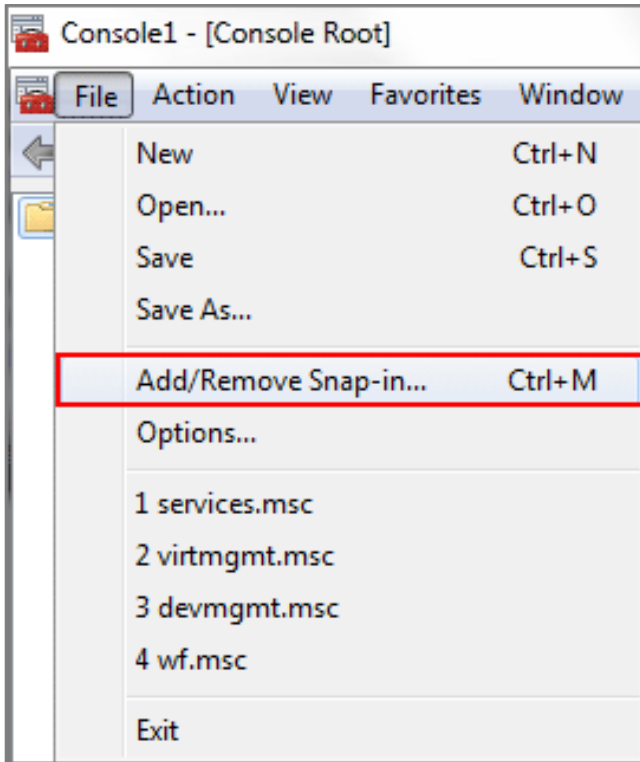

In Windows 7 Operating System **Start Menu > Search Box**, type **mmc** and press **Enter**.

Start Menu > Search Box > mmc

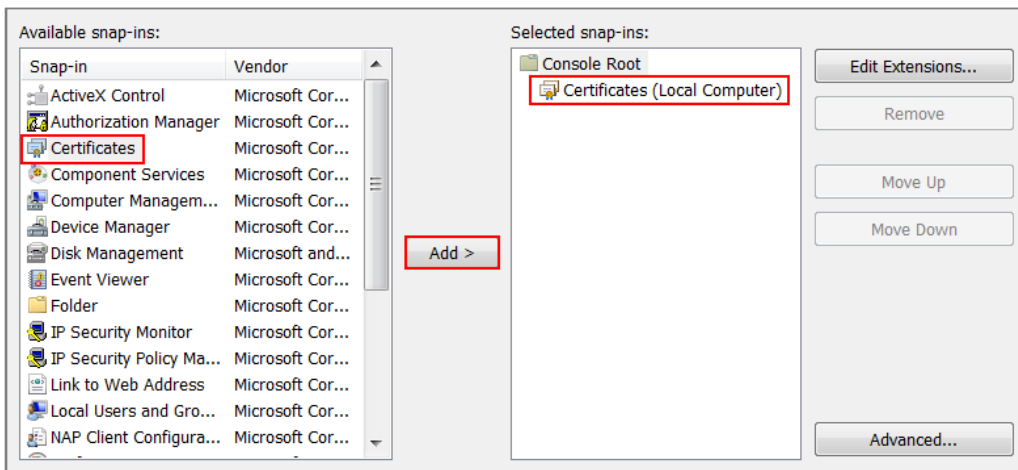

In the mmc console window, click **File > Add/Remove Snap-in...**

File > Add/Remove Snap-in...

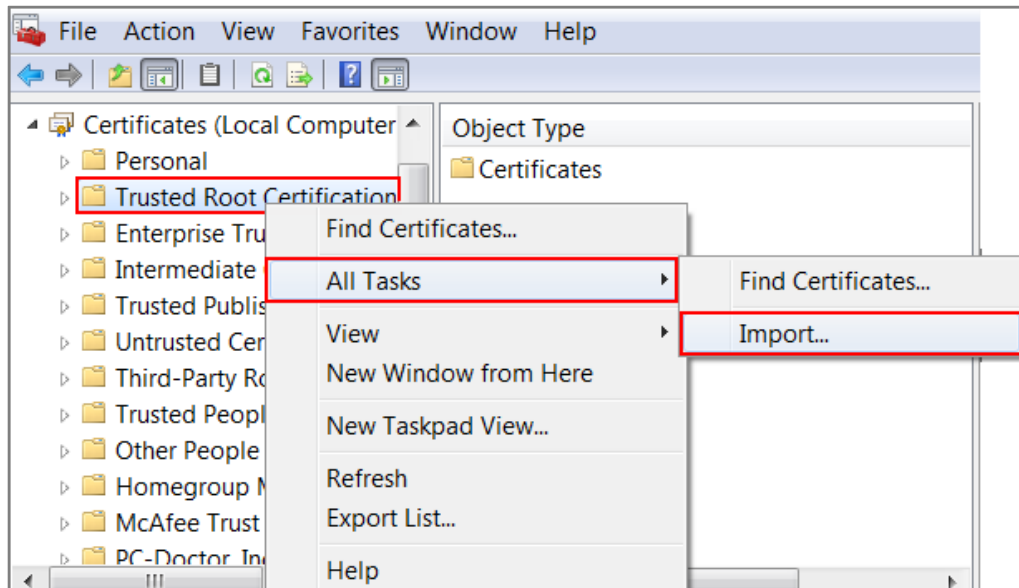

In the **Available snap-ins**, select the **Certificates** and click **Add** button. Select **Computer account > Local Computer**. Then, click **Finished** and **OK** to close the **Snap-ins** window.

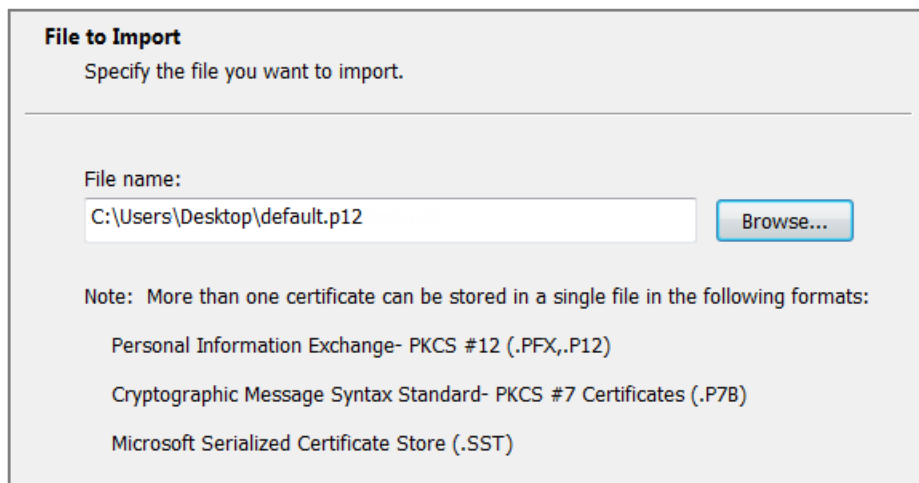

Available snap-ins > Certificates > Add

In the mmc console window, open the **Certificates (Local Computer) > Trusted Root Certification Authorities**, right click **Certificate > All Tasks > Import...**

Click **Next**. Then, **Browse...**, and locate the .p12 file you downloaded earlier. Then, click **Next**.

Click **Next**, type **zyx123** in the **Password** field and click **Next** again

Password

To maintain security, the private key was protected with a password.

Type the password for the private key.

Password:

Enable strong private key protection. You will be prompted every time the private key is used by an application if you enable this option.

Mark this key as exportable. This will allow you to back up or transport your keys at a later time.

Include all extended properties.

Select **Place all certificates in the following store** and then click **Browse** and find **Trusted Root Certification Authorities**. Click **Next**, then click **Finish**.

Certificate Store

Certificate stores are system areas where certificates are kept.

Windows can automatically select a certificate store, or you can specify a location for the certificate.

Automatically select the certificate store based on the type of certificate

Place all certificates in the following store

Certificate store:

 Note: Each ZyWALL/USG device has its own self-signed certificate by factory default. When you reset to default configuration file, the original self-signed certificate is erased, and a new self-signed certificate will be created when the ZyWALL/USG boots the next

Test the Result

Type <http://www.facebook.com/> or <https://www.facebook.com/> into the browser, the error message occurs.

Go to the ZyWALL/USG **Monitor > Log**, you will see [alert] log message such as below.

Monitor > Log

Priority	Category	Message	Note
alert	Blocked web sites	d2ebu295n9axq5.webhst.com: Keyword blocking, Rule_id=1, SSI=N	WEB BLOCK
alert	Blocked web sites	d2ebu295n9axq5.webhst.com: Keyword blocking, Rule_id=1, SSI=N	WEB BLOCK

What Could Go Wrong?

If you are not be able to configure any **Content Filter** policies or it's not working, there are two possible reasons:

You have not subscribed for the **Content Filter** service.

You have subscribed for the **Content Filter** service but the license is expired.

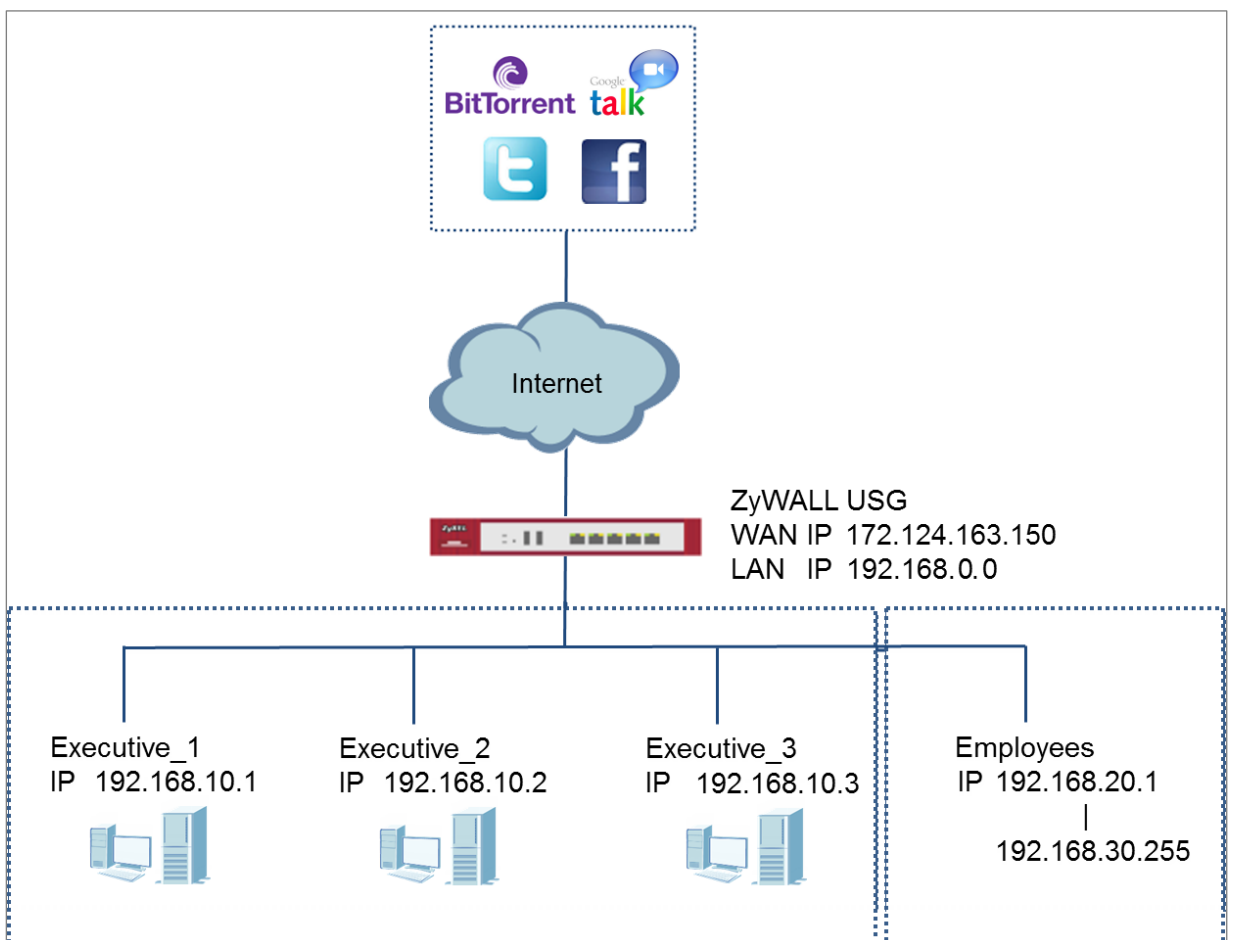

You can click the link from the **CONFIGURATION > Licensing > Registration** screen of your ZyXEL device's Web Configurator or click the myZyXEL.com 2.0 icon from the portal page (<https://portal.myzyxel.com/>) to register or extend your **Content Filter** license.

How To Exempt Specific Users From a Blocked Website

This is an example of using a ZyWALL/USG Security Policy to exempt three corporate executives from a blocked Website, while controlling Internet access for other employees' accounts.

With executives connect to a blocked Website using PCs with static IP addresses, you could set up address group to allow their traffic.

ZyWALL/USG with Exempt Specific Users From a Blocked Website Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the Security Policy on the ZyWALL/USG for Employees

In the ZyWALL/USG, go to **CONFIGURATION > Object > Address > Add Address Rule** to create address range for employees.

CONFIGURATION > Object > Address > Add Address Rule

The screenshot shows a dialog box titled "Edit Address Rule Employees". It contains the following fields and values:

Name:	Employees
Address Type:	RANGE
Starting IP Address:	192.168.20.1
End IP Address:	192.168.30.255

At the bottom right, there are two buttons: "OK" and "Cancel". The "OK" button is highlighted with a red box.

Set up **Security Policy** for employees, go to **CONFIGURATION > Security Policy > Policy Control > Add corresponding**, configure a **Name** for you to identify the employees' **Security Policy** profile.

For **From** and **To** policies, select the direction of travel of packets to which the policy applies. Select **Source** to be the **Employees** to apply the policy to all traffic coming from them.

Scroll down to **UTM Profile**, select the general policy that allows employees to access the Internet. (Using built-in Office profile in this example blocks the non-productive services, such as Advertisement & Pop-Ups, Gambling and Peer to Peer services...etc.).

CONFIGURATION > Security Policy > Policy Control > Add corresponding > Employees_Security

<input checked="" type="checkbox"/> Enable

Then, go to **CONFIGURATION > Object > Address Group > Add Address Group Rule** to create a **Group Members' Name** and move the just created executives address

object to **Member**.

CONFIGURATION > Object > Address Group > Add Address Group Rule

The screenshot shows the 'Configuration' window for adding an address group rule. The 'Name' field is set to 'Executive' and is highlighted with a red box. The 'Description' field is empty and labeled '(Optional)'. Below the configuration fields is the 'Member List' section, which is divided into two panes: 'Available' and 'Member'. The 'Available' pane contains a list of objects: 'ad-users', 'ldap-users', 'radius-users', 'Executive_1', 'Executive_2', and 'Executive_3'. The 'Executive_1', 'Executive_2', and 'Executive_3' entries are highlighted with a red box. Between the two panes are two arrow buttons: a right-pointing arrow (highlighted with a red box) and a left-pointing arrow. The 'Member' pane is currently empty.

Set up **Security Policy** for executives, go to **CONFIGURATION > Security Policy > Policy Control > Add corresponding**, configure a **Name** for you to identify the executives' **Security Policy** profile.

For **From** and **To** policies, select the direction of travel of packets to which the policy applies. Select **Source** to be the **Executives** to apply the policy to all traffic coming from them. In order to view the results later, to have the ZyWALL/USG generate **Log matched traffic (log)**.

Leave all UTM Profiles disabled.

CONFIGURATION > Security Policy > Policy Control > Add corresponding > Executives_Security

<input checked="" type="checkbox"/> Enable	
Name:	Executive_Security
Description:	<input type="text"/> (Optional)
From:	LAN
To:	any (Excluding ZyV)
Source:	any
Destination:	any
Service:	any

Schedule:	none
Action:	allow
Log matched traffic:	log

Test the Result

Connect to the Internet from two computers: one from executive_2 address (192.168.10.2) and one from an employee address (192.168.20.1) and both access to <https://hangouts.google.com/>.

Go to the ZyWALL/USG **Monitor > Log**, you will see [notice] and [info] log message such as below. In this example result, connections from executive_2 address (192.168.10.2) use **Security Policy** priority: 1. Connections from employee address (192.168.20.1) use **Security Policy** priority: 2 and **UTM Profile** Rule_id=2.

What Could Go Wrong?

If you are not be able to configure any **UTM** policies or it's not working, there are two possible reasons:

You have not subscribed for the **UTM** service.

You have subscribed for the **UTM** service but the license is expired.

You can click the link from the **CONFIGURATION > Licensing > Registration** screen of your ZyXEL device's Web Configurator or click the myZyXEL.com 2.0 icon from the portal page (<https://portal.myzyxel.com/>) to register or extend your **UTM** license.

How To Control Access To Google Drive

This is an example of using a ZyWALL/USG UTM Profile in a Security Policy to block access to a specific file transfer service. You can use Application Patrol and Policy Control to make sure that a certain file transfer service cannot be accessed through both HTTP and HTTPS protocols.

ZyWALL/USG with Control Access To Google Drive Settings Example

 **Note:** All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the SSL Inspection on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > UTM Profile > SSL Inspection > Add rule**, configure a **Name** for you to identify the **SSL Inspection** profile.

Then, select the **CA Certificate** to be the certificate used in this profile. Select **Block** to **Action for Connection with SSL v3** and select **Log** type to be **log alert**. Leave other actions as default settings.

CONFIGURATION > UTM Profile > SSL Inspection > Add rule

General Settings			
Name:	<input type="text" value="Google Drive Contr"/>		
Description:	<input type="text"/>		
CA Certificate:	<input type="text" value="default"/>		
SSL/TLS version supported minimum:	<input type="text" value="ssl3"/>	Log:	<input type="text" value="log alert"/>
Action for connection with unsupported suit:	<input type="text" value="pass"/>	Log:	<input type="text" value="no"/>
Action for connection with untrusted cert chain:	<input type="text" value="pass"/>	Log:	<input type="text" value="log"/>

Set Up the Security Policy on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Security Policy > Policy Control**, configure a **Name** for you to identify the **Security Policy** profile. For **From** and **To** policies, select the direction of travel of packets to which the policy applies.

Scroll down to **UTM Profile**, select **Content Filter** and select a profile from the list box (Facebook_Block in this example). Then, select **SSL Inspection** and select a profile from the list box (Facebook_Block in this example).

Export Certificate Only | Password: [] | **Export Certificate with Private Key**

OK Cancel

Save default certificate as *.p12 file to Windows 7 Operation System.

default.p12

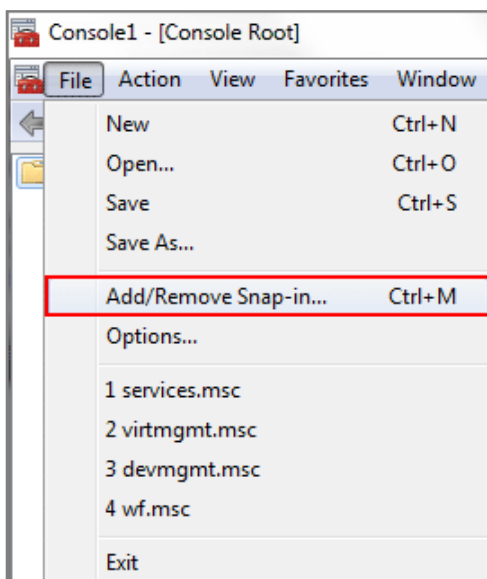

In Windows 7 Operating System **Start Menu > Search Box**, type **mmc** and press **Enter**.

Start Menu > Search Box > mmc

In the mmc console window, click **File > Add/Remove Snap-in...**

File > Add/Remove Snap-in...

In the **Available snap-ins**, select the **Certificates** and click **Add** button. Select **Computer account > Local Computer**. Then, click **Finished** and **OK** to close the **Snap-ins** window.

Available snap-ins > Certificates > Add

In the mmc console window, open the **Certificates (Local Computer) > Trusted Root Certification Authorities**, right click **Certificate > All Tasks > Import...**

Click **Next**. Then, **Browse...**, and locate the .p12 file you downloaded earlier. Then, click **Next**.

File to Import
Specify the file you want to import.

File name:
C:\Users\Desktop\default.p12

Note: More than one certificate can be stored in a single file in the following formats:

- Personal Information Exchange- PKCS #12 (.PFX,.P12)
- Cryptographic Message Syntax Standard- PKCS #7 Certificates (.P7B)
- Microsoft Serialized Certificate Store (.SST)

Click **Next**, type **zyx123** in the **Password** field and click **Next** again

Password
To maintain security, the private key was protected with a password.

Type the password for the private key.

Password:

Enable strong private key protection. You will be prompted every time the private key is used by an application if you enable this option.

Mark this key as exportable. This will allow you to back up or transport your keys at a later time.

Include all extended properties.

Select **Place all certificates in the following store** and then click **Browse** and find **Trusted Root Certification Authorities**. Click **Next**, then click **Finish**.

Certificate Store

Certificate stores are system areas where certificates are kept.

Windows can automatically select a certificate store, or you can specify a location for the certificate.

Automatically select the certificate store based on the type of certificate

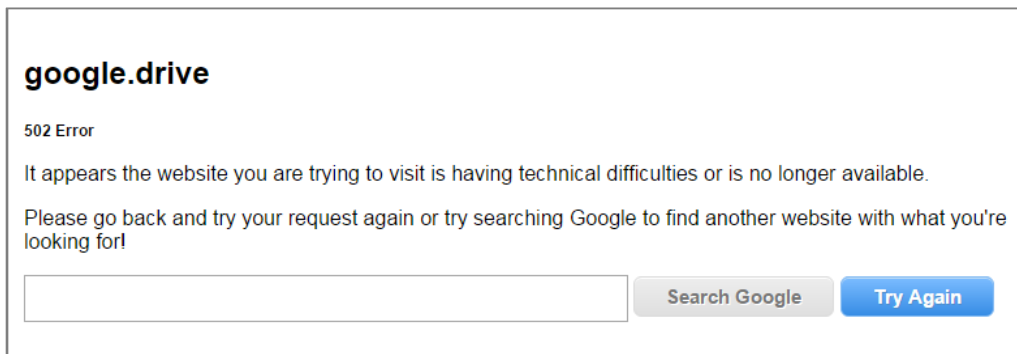

Place all certificates in the following store

Certificate store:

 Note: Each ZyWALL/USG device has its own self-signed certificate by factory default. When you reset to default configuration file, the original self-signed certificate is erased, and a new self-signed certificate will be created when the ZyWALL/USG boots the next time.

Test the Result

Type <http://drive.google.com/> or <https://drive.google.com/> into the browser, the error message occurs.

Go to the ZyWALL/USG **Monitor > Log**, you will see [alert] log message such as below.

Monitor > Log

Priority	Category	Message	Note
alert	Application Patrol	Rule_id=1 SSI=Y App=[File Transfer]Google-drive:access Action=reject SID=50335494	ACCESS BLOCK
alert	Application Patrol	Rule_id=1 SSI=Y App=[File Transfer]Google-drive:access Action=reject SID=50335494	ACCESS BLOCK

What Could Go Wrong?

If you are not be able to configure any **Application Patrol** policies or it's not working, there are two possible reasons:

You have not subscribed for the **Application Patrol** service.

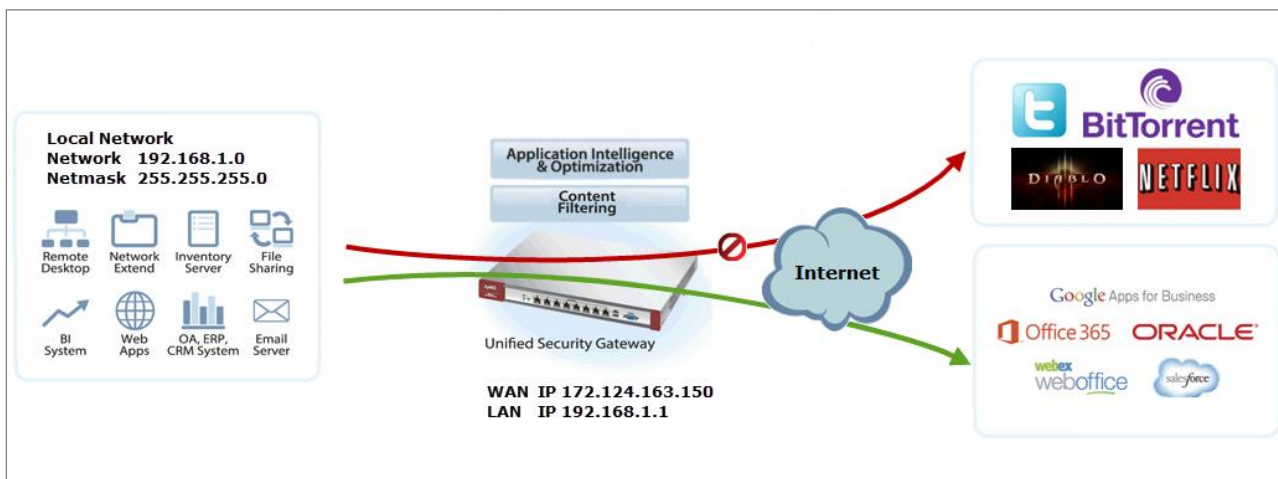

You have subscribed for the **Application Patrol** service but the license is expired.

You can click the link from the **CONFIGURATION > Licensing > Registration** screen of your ZyXEL device's Web Configurator or click the myZyXEL.com 2.0 icon from the portal page (<https://portal.myzyxel.com/>) to register or extend your **Application Patrol** license.

How To Block HTTPS Websites Using Content Filtering and SSL Inspection

This is an example of using a ZyWALL/USG Content Filtering, SSL Inspection and Security Policy to block access to malicious or not business-related websites.

ZyWALL/USG with Block HTTPS Websites Using Content Filtering and SSL Inspection Settings Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the Content Filter on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > UTM Profile > Content Filter > Profile Management > Add Filter File > Category Service**. Configure a **Name** for you to identify the **Content Filter Profile** and select **Enable Custom Service**.

CONFIGURATION > UTM Profile > Content Filter > Profile > Profile Management > Add > Category Service > General Settings

General Settings

What Could Go Wrong?

If you are not be able to configure any **Content Filter** policies or it's not working, there are two possible reasons:

You have not subscribed for the **Content Filter** service.

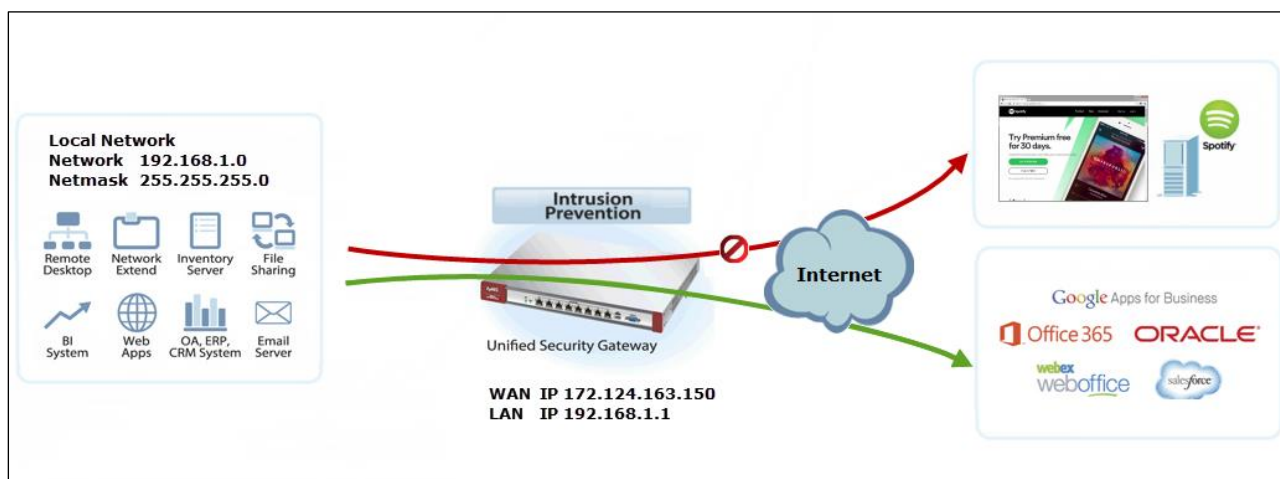

You have subscribed for the **Content Filter** service but the license is expired.

You can click the link from the **CONFIGURATION > Licensing > Registration** screen of your ZyXEL device's Web Configurator or click the myZyXEL.com 2.0 icon from the portal page (<https://portal.myzyxel.com/>) to register or extend your **Content Filter** license.

How To Block the Spotify Music Streaming Service

This is an example of using a ZyWALL/USG IDP Profile to block DNS query packet. When the Spotify software launches, it will send a DNS query for Spotify's public server. In this example, you can create a custom IDP to block DNS query packet if this packet includes the Spotify signature.

ZyWALL/USG with Block the Spotify Service Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up IDP Profile on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > UTM Profile > IDP > Custom Signatures > Add Custom Signatures**, configure a **Name** for you to identify the **IDP Profile**.

Select **medium** as the **Severity** level. Select all **Platform**. Select **Policy Type** to be **Access-Control** here to limit access network resources such as servers.

CONFIGURATION > Security Policy > IDP > Custom Signatures > Add Custom Signatures > Setup & Information

Setup

Name: Spotify
Signature ID: 9986234

Information

Severity: medium

Platform:
 Windows
 Linux
 FreeBSD
 Solaris
 Other-Unix
 Network-Device
 MAC
 iOS
 Android
 Windows-Mobile
 Symbian
 Others

Policy Type: Access-Control

Scroll down to the **Payload Options** section, the type Spotify's software signature: |73||70||6F||74||69||66||79| into the **Content** field. Click **OK**.

CONFIGURATION > Security Policy > IDP > Custom Signatures > Add Custom Signatures > Payload Options

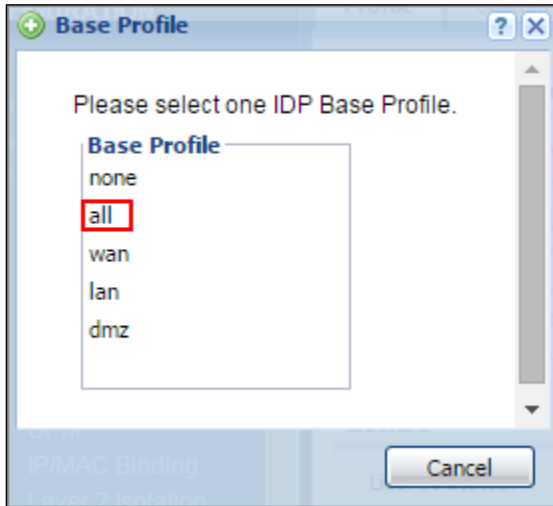

Payload Options

Payload Size: [0] Bytes

#	Offset	Content	Case-insensitive	Decode as URI
1	0	73 70 6F 74 69 66 79	no	no

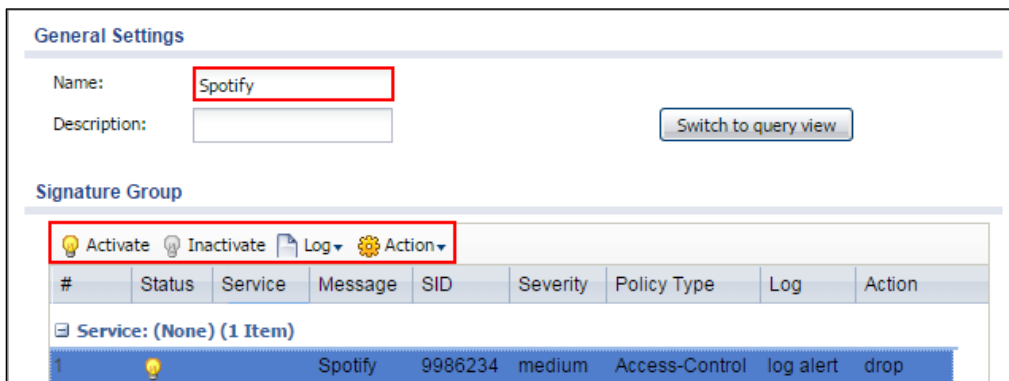

In the ZyWALL/USG, go to **CONFIGURATION > UTM Profile > IDP > Profile > Base Profile**. A pop-up screen will appear and select a **Base Profile** to go to the profile details screen.

CONFIGURATION > UTM Profile > IDP > Profile > Base Profile

Configure a **Name** for you to identify the **IDP Profile**. **Activate** the newly created IDP Profile and select **Action** to be **drop**. Select **Log** type to be **log alert** in order to view the result later.

CONFIGURATION > UTM Profile > IDP > Profile > Base Profile > Add Profile

Test the Result

Type <http://www.spotify.com/> or [https://www.spotify.com /](https://www.spotify.com/) into the browser, the error message occurs.

Go to the ZyWALL/USG **Monitor > Log**, you will see [crit] log message such as below.

Monitor > Log

What Could Go Wrong?

If you are not able to see the Log message, the EICAR virus file might be detected and blocked by other Anti-Virus software before ZyWALL/USG scans the virus file.

If you are not be able to If you are not be able to configure any **Anti-Virus** policies or it's not working, there are two possible reasons:

- You have not subscribed for the **Anti-Virus** service.

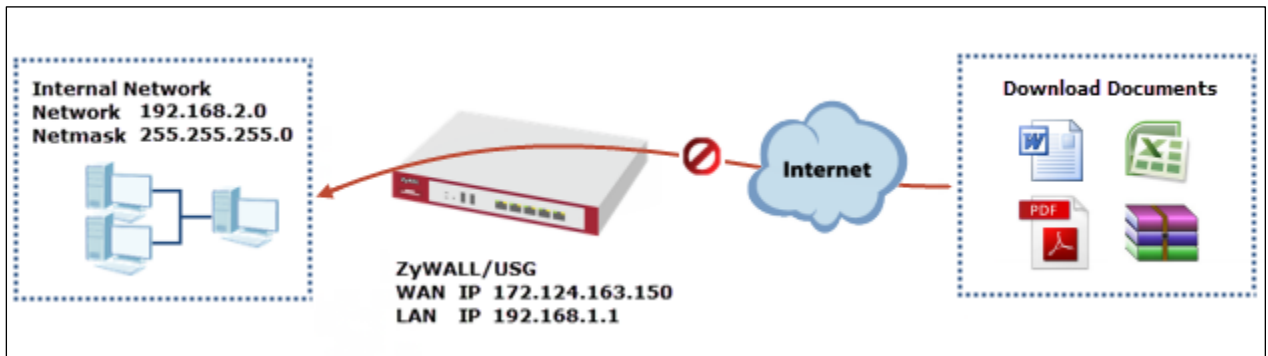

- You have subscribed for the **Anti-Virus** service but the license is expired.

You can click the link from the **CONFIGURATION > Licensing > Registration** screen of your ZyXEL device's Web Configurator or click the myZyXEL.com 2.0 icon from the portal page (<https://portal.myzyxel.com/>) to register or extend your **Anti-Virus** license.

How To Block Downloading of DOC, PDF, XLS and ZIP Files

This is an example of using a ZyWALL/USG UTM Profile to block accessing and downloading files from a FTP or HTTP server. Use the Anti-Virus Black List to set up the blocked list of file patterns to restrict accessing and downloading of certain files.

Block downloading of DOC, PDF, XLS and ZIP Files Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the Anti-Virus Profile on the ZyWALL/USG

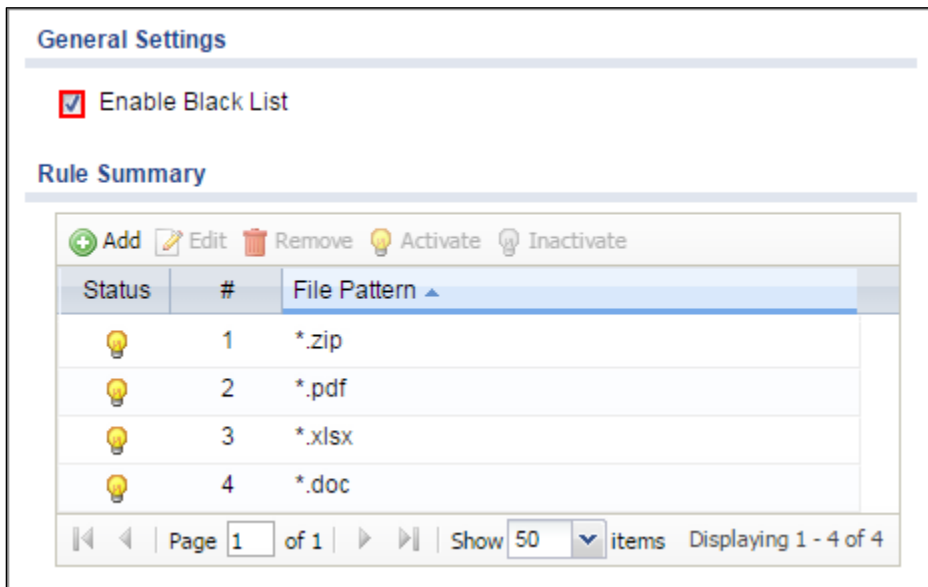

In the ZyWALL/USG, go to **CONFIGURATION > UTM Profile > Anti-Virus > Black/White List > Black List**, click the **Add** icon. Use wildcards (*) to configure **File Pattern**.

CONFIGURATION > UTM Profile > Anti-Virus > Black/White List > Black List > Add rule

Go to **CONFIGURATION > UTM Profile > Anti-Virus > Black/White List > Black List > General Settings** to select **Enable Black List**.

CONFIGURATION > UTM Profile > Anti-Virus > Black/White List > Black List > General Settings

In the ZyWALL/USG, go to **CONFIGURATION > UTM Profile > Anti-Virus > Profile > Profile Management > Add rule** and configure a **Name** for you to identify the **Anti-Virus** Profile.

Select **Log** type to be **log alert** in order to view the result later.

Make sure you select **Check Black List** and click **OK**.

CONFIGURATION > UTM Profile > Anti-Virus > Black/White List > Black List > General Settings

Configuration

Name:

Description: (Optional)

Actions When Matched

Destroy infected file

Log: ▼

Check White List

Check Black List

File decompression

Enable file decompression (ZIP and RAR)

Destroy compressed files that could not be decompressed

Set Up the Security Policy on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Security Policy > Policy Control**, configure a **Name** for you to identify the **Security Policy** profile. For **From** and **To** policies, select the direction of travel of packets to which the policy applies.

Scroll down to **UTM Profile**, select **Anti-Virus** and select a profile from the list box (Block_FTP_HTTP_Download in this example).

CONFIGURATION > Security Policy > Policy Control

<input checked="" type="checkbox"/> Enable	
Name:	Block_FTP_Download

<input type="checkbox"/> SSL Inspection:	none	Log: by profile

Test the Result

When you download a PDF file from the HTTP server, the browser will display: Failed to load PDF document.

You have not subscribed for the **Anti-Virus** service.

You have subscribed for the **Anti-Virus** service but the license is expired.

You can click the link from the **CONFIGURATION > Licensing > Registration** screen of your ZyXEL device's Web Configurator or click the myZyXEL.com 2.0 icon from the portal page (<https://portal.myzyxel.com/>) to register or extend your **Anti-Virus** license.

How To Configure an Anti-Spam Policy with Mail Scan and DNSBL

This is an example of using ZyWALL/USG UTM Profile to mark or discard spam (unsolicited commercial or junk e-mail). Use the Anti-Spam white list to identify legitimate e-mail. Use the Anti-Spam black list to identify spam e-mail. The ZyWALL/USG can also check e-mail against a DNS Black List (DNSBL) of IP addresses of servers that are suspected of being used by spammers. ZyWALL/USG with Anti-Spam Profile to mark or discard spam e-mail Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the Anti-Spam Profile on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > UTM Profile > Anti-Spam > Profile > Profile Management > Add rule**, configure a **Name** for you to identify the **Anti-Spam** profile.

Select from the list of available **Scan Options** and desired Log type whether to have the ZyWALL/USG generate a log (**log**), log and alert (**log alert**) or neither (**no**) by default when traffic matches this policy. Click **OK** to return to the **General** screen.

CONFIGURATION > UTM Profile > Anti-Spam > Profile > Profile Management > Add rule

General Settings

Name:

Description:

Log:

Scan Options

What Could Go Wrong?

If you are not be able to If you are not be able to configure any **Anti-Spam** policies or it's not working, there are two possible reasons:

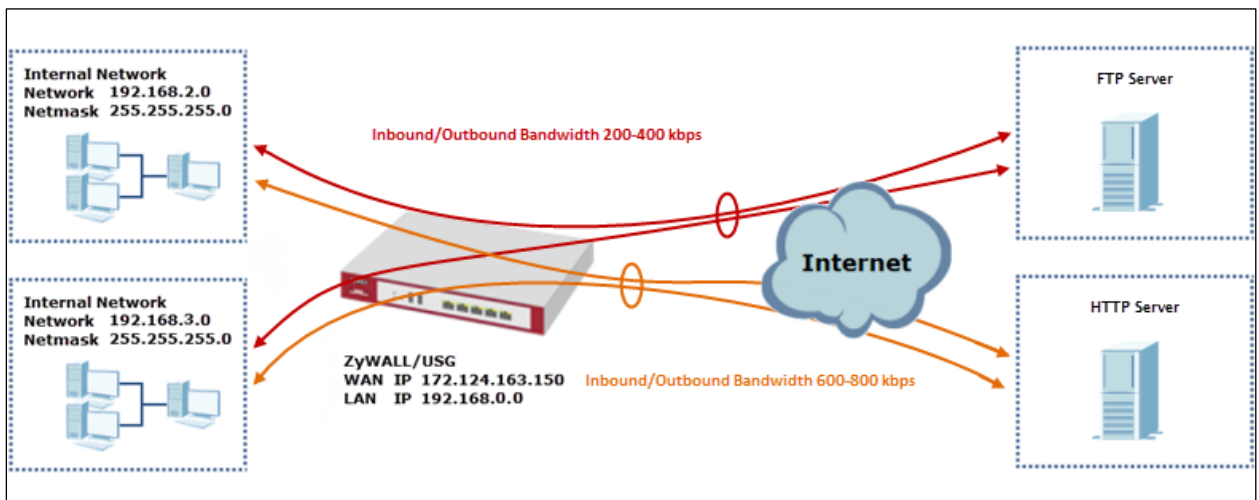

- You have not subscribed for the **Anti- Spam** service.

- You have subscribed for the **Anti- Spam** service but the license is expired.

You can click the link from the **CONFIGURATION > Licensing > Registration** screen of your ZyXEL device's Web Configurator or click the myZyXEL.com 2.0 icon from the portal page (<https://portal.myzyxel.com/>) to register or extend your **Anti-Spam** license.

How to Configure Bandwidth Management for FTP and HTTP Traffic

This is an example of using ZyWALL/USG Bandwidth Management (BWM) to control the bandwidth allocation for FTP and HTTP traffic. You can use source interface, destination interface, destination port, schedule, user, source, destination information, DSCP code and service type as criteria to create a sequence of specific conditions to allocate bandwidth for the matching packets. When the BWM is configured, you can limit bandwidth consuming services, such as FTP, while providing consistent HTTP service with bandwidth guarantees. ZyWALL/USG with Bandwidth Management for HTTP and FTP Traffic Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. The total available bandwidth assumption is 1,600 kbps. This example was tested using USG310

Set Up the Bandwidth Management for FTP on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > BWM > Configuration > Add Policy**, select **Enable** and type **FTP Any-to-WAN** as the policy's **Description**.

Leave the **Incoming Interface** to **any** and select the Outgoing Interface to be **wan1**. Select **Service Type** to be the **Service Object** and select **FTP** from the list box.

Set the **Guaranteed Bandwidth Inbound** to 200 (kbps) and set **Priority 5** (low-to-medium). Set the **Maximum** to 400 (kbps). Set the **Guaranteed Bandwidth Outbound** to 200 (kbps) and set **Priority 5**. Set the **Maximum** to 400 (kbps).

In order to view the result later, set the **Log** setting to be **log alert**. Click **OK** to return to the **General** screen.

What Could Go Wrong?

If the "outbound" in the guaranteed bandwidth settings apply to traffic going from the connection initiator to the outgoing interface. "Inbound" refers to the reverse direction.

Make sure you have registered the **Application Patrol** service on the ZyWALL/USG to use **Application Object** as the **Service Type** in the bandwidth management rules.

Service Type: Service Object Application Object

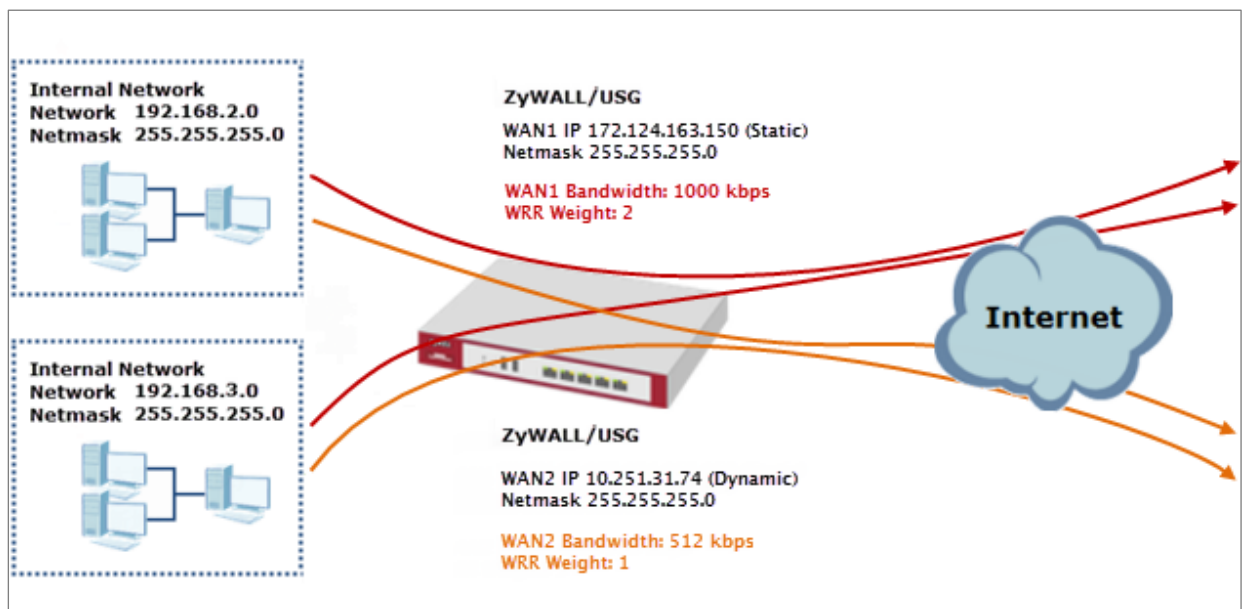

Application Object: BitTorrent

You can click the link from the **CONFIGURATION > Licensing > Registration** screen of your ZyXEL device's Web Configurator or click the myZyXEL.com 2.0 icon from the portal page (<https://portal.myzyxel.com/>) to register or extend your **Application Patrol** license.

How to Configure a Trunk for WAN Load Balancing with a Static or Dynamic IP Address

This is an example of using ZyWALL/USG Trunk for two WAN connections to the Internet. The available bandwidth for the connections is 1000 kbps (wan1 with static IP address) and 512 Kbps (wan2 with dynamic IP address) respectively. As these connections have different bandwidths, we will use the Weighted Round Robin (WRR) algorithm to send traffic to wan1 and wan2 in a 2:1 ratio.

ZyWALL/USG with WAN Load Balancing Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the Available Bandwidth on WAN1 Interfaces on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Interface > Ethernet > WAN1 > Egress Bandwidth** and enter the available bandwidth (1000 kbps) in the **Egress Bandwidth** field. Click **OK**.

CONFIGURATION > Interface > Ethernet > WAN1

The screenshot shows the configuration page for the WAN1 interface. It is divided into three main sections: General Settings, IP Address Assignment, and Interface Parameters.

- General Settings:** Includes a checked checkbox for "Enable Interface".
- Interface Properties:** Contains fields for Interface Type (external), Interface Name (WAN1), Port (P1), Zone (WAN), MAC Address (B8:EC:A3:A9:C0:0B), and Description (Optional).
- IP Address Assignment:** Features radio buttons for "Get Automatically" and "Use Fixed IP Address" (which is selected). Below this are fields for IP Address (172.124.163.150), Subnet Mask (255.255.255.0), Gateway (Optional), and Metric (0, 0-15). There is also a checkbox for "Enable IGMP Support" with options for "IGMP Upstream" (selected) and "IGMP Downstream".
- Interface Parameters:** Contains the "Egress Bandwidth" field set to 1000 Kbps.

Set Up the Available Bandwidth on WAN2 Interfaces on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Interface > Ethernet > WAN2 > Egress Bandwidth** and enter the available bandwidth (512 kbps) in the **Egress Bandwidth** field. Click **OK**.

CONFIGURATION > Interface > Ethernet > WAN2

The screenshot shows the configuration page for the WAN2 interface. The 'Egress Bandwidth' field is highlighted with a red box and contains the value '512'. Other fields include 'Interface Type' (external), 'Interface Name' (WAN2), 'Port' (P3), 'Zone' (WAN), 'MAC Address' (B8:EC:A3:A9:C0:0D), and 'IP Address Assignment' (Get Automatically, 10.251.31.74).

Set Up the WAN Trunk on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Interface > Trunk > User Configuration > Add Trunk**. Configure a **Name** for you to identify the Trunk profile and set the **Load Balancing Algorithm** field to be the **Weighted Round Robin**.

Add **WAN1** and enter **2** in the **Weight** column. Add **WAN2** and enter **1** in the **Weight** column. Click **OK** to return to the **Configuration** screen.

CONFIGURATION > Interface > Trunk > User Configuration > Add Trunk

Name:

Load Balancing Algorithm:

#	Member	Mode	Weight
1	WAN1	Active	2
2	WAN2	Active	1

Page 1 of 1 Show 50 items Displaying 1 - 2 of 2

In the **Configuration** screen, go to **Default WAN Trunk** section, select **User Configured Trunk** and select the newly created Trunk from the list box. Click **Apply**.

CONFIGURATION > Interface > Trunk > Default WAN Trunk

Default WAN Trunk

Advance

Default Trunk Selection

SYSTEM_DEFAULT_WAN_TRUNK

User Configured Trunk

Test the Result

Browse any website to test the result.

The Weighted Round Robin (WRR) algorithm is best suited for situations where the bandwidths set for the two WAN interfaces are different. An interface with a larger weight (**WAN1**) gets more chances to transmit traffic than an interface with a smaller weight (**WAN2**).

+ WAN2	1000M/Full	268	169	0	0

What Could Go Wrong?

If there is no traffic passing through either WAN1 or WAN2 interfaces, check that the **Mode** of both WAN1 & WAN2 should be **Active**. If a trunk is in **Passive** mode, the ZyWALL/USG will use this connection only when all of the connections set to **Active** mode are down.

How to Configure DNS Inbound Load Balancing to balance DNS Queries Among Interfaces

This is an example of using the ZyWALL/USG dynamically responding to DNS query messages with its least loaded interface's IP address. The DNS query senders will then transmit packets to that interface instead of an interface that has a heavy load. This example assumes that your company's domain name is `www.example.com`. You want your ZyWALL/USG's WAN1 (202.1.2.3) and WAN2 (202.5.6.7) to use DNS inbound load balancing to balance traffic loading coming from the Internet.

ZyWALL/USG with DNS Inbound Load Balancing Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the DNS Inbound Load Balancing on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Network > DNS Inbound LB**. Edit the **Query Domain Name**, set the **Load Balancing Algorithm** field to be the **Least Load - Total**. Click **Add** to create a new **Load Balancing Member**.

CONFIGURATION > Network > DNS Inbound LB

General Setting

Enable

DNS Settings

Query Domain Name:

If you want to configure Security Option Control, please go to [DNS](#)

CONFIGURATION > Network > DNS Inbound LB

The screenshot shows a dialog box titled "Add Load Balancing Member" with a sub-header "Load Balancing Member". It contains the following fields and options:

- Member: 1
- Monitor Interface: WAN1 (highlighted with a red box) DHCP client -- 202.1.2.3/255.255.255.0
- IP Address:
 - Same as Monitor Interface 202.1.2.3
 - Custom 0.0.0.0

At the bottom right, there are "OK" and "Cancel" buttons, with the "OK" button highlighted by a red box.

CONFIGURATION > Network > DNS Inbound LB

The screenshot shows a dialog box titled "Add Load Balancing Member" with a sub-header "Load Balancing Member". It contains the following fields and options:

- Member: 2
- Monitor Interface: WAN2 (highlighted with a red box) DHCP client -- 202.5.6.7/255.255.255.0
- IP Address:
 - Same as Monitor Interface 202.5.6.7
 - Custom 0.0.0.0

At the bottom right, there are "OK" and "Cancel" buttons, with the "OK" button highlighted by a red box.

Go to **the Global Setting page** to select **Enable DNS Load Balancing**.

CONFIGURATION > Network > DNS Inbound LB

The screenshot shows a section titled "Global Setting" with a single checkbox option: Enable DNS Load Balancing. The checkbox is highlighted with a red box.

Set Up the NAT Rule on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Network > NAT**. Configure the **Virtual**

Server to forward the traffic from WAN to Internal Server (192.168.1.33). Click **OK**.

CONFIGURATION > Network > NAT

General Settings	
<input checked="" type="checkbox"/> Enable Rule	
Rule Name:	NAT_WAN1
Port Mapping Type	
Classification:	<input checked="" type="radio"/> Virtual Server <input type="radio"/> 1:1 NAT <input type="radio"/> Many 1:1 NAT

Mapped Port:	80

Test the Result

Open the browser and query <http://zyxel.for-our.info/>.

Create a **Security Policy** in order to view the testing result. Set **Destination** to be the Internal Server IP address (192.168.1.33 in this example) and set **Log** type to be the **Log Alert**.

Go to the ZyWALL/USG **Monitor > Log**, you will see [alert] log message such as below. The **Source Interface** is the WAN1 or WAN2 interface which is handling the least amount of outgoing and incoming traffic.

Prior...	Category	Message	Source	Source I...	Destination	Note
alert	Security Policy ...	priority:1, from ANY to ANY, TCP, service oth...	202.1.2.4:52268	WAN2	192.168.1.33:80	ACCESS FORWA...
alert	Security Policy ...	priority:1, from ANY to ANY, TCP, service oth...	202.1.2.4:52267	WAN2	192.168.1.33:80	ACCESS FORWA...
alert	Security Policy ...	priority:1, from ANY to ANY, TCP, service oth...	202.1.2.4:52266	WAN1	192.168.1.33:80	ACCESS FORWA...

What Could Go Wrong?

If you cannot access the Internal Server, please check that the NAT configuration matches the Internal Server IP address and Port number. If the NAT configuration is correct, please check the system status of your Internal Server is up.

How to Manage Voice Traffic

This is an example of using Application Layer Gateway (ALG) to allow the SIP (Session Initiation Protocol) voice traffic through the ZyWALL/USG. To achieve high-quality voice transmissions, use ZyWALL/USG provides Bandwidth Management (BWM) function to effectively manage bandwidth according to flexible criteria. You can limit bandwidth consuming services, such as Peer-to-Peer (P2P) and FTP service while providing a higher priority and consistent bandwidth for voice traffic.

ZyWALL/USG with Voice Traffic Management Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the SIP ALG on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Network > SIP > SIP Settings**, select **Enable SIP ALG**, **Enable SIP Transformations** (optional), **Restrict Peer to Peer Signaling Connection** and **Restrict Peer to Peer Media Connection**. Make sure the **SIP Signaling Port** is configured the same as your VoIP phone SIP signaling port. Click **Apply**.

CONFIGURATION > BWM > Configuration > Add Policy

SIP Settings

Enable SIP ALG

Enable SIP Transformations

Enable Configure SIP Inactivity Timeout

SIP Media Inactivity Timeout : (seconds)

SIP Signaling Inactivity Timeout : (seconds)

Restrict Peer to Peer Signaling Connection

Restrict Peer to Peer Media Connection i

SIP Signaling Port :

+ Add ✎ Edit ✖ Remove

#	Port
1	5060

 **Note:** If you are using a custom or additional UDP port number (not 5060) for SIP traffic, use the **Add** icon to add **SIP Signaling Port** numbers.

Set Up the Bandwidth Management for SIP on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > BWM > BWM Global Settings**, select

Enable **BWM** and **Enable Highest Bandwidth Priority for SIP Traffic**.

CONFIGURATION > BWM > BWM Global Settings > Enable BWM

Set Up the Bandwidth Management for P2P on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > BWM > Configuration > Add Policy**, select **Enable** and type **P2P Any-to-WAN** as the policy's **Description**.

Leave the **Incoming Interface** to **any** and select the Outgoing Interface to be **WAN1**. Select **Service Type** to be the **Application Object** and select **P2P** from the list box.

Set the **Guaranteed Bandwidth Inbound** to 100 (kbps) and set **Priority** 5. Set the **Maximum** to 150 (kbps). Set the **Guaranteed Bandwidth Outbound** to 100 (kbps) and set **Priority** 5. Set the **Maximum** to 150 (kbps). Click **OK** to return to the **General** screen.

CONFIGURATION > BWM > Configuration > Add Policy

	<input type="checkbox"/> Maximize Bandwidth Usage	Maximum: 200 kbps
	Outbound: 150 kbps (0 : disabled)	Priority: 5
	<input type="checkbox"/> Maximize Bandwidth Usage	Maximum: 200 kbps

Note: In Bandwidth Shaping, the highest priority is (1) the lowest priority is (7).

Test the Result

Add a **Security Policy** rule to view the SIP log:

CONFIGURATION > BWM > Configuration > Add Policy

Dial Phone Number 1001 (192.168.10.2 in this example) from Phone Number 1002 (192.168.100.2 in this example), go to the ZyWALL/USG **Monitor > Log**, you will see [alert] log message such as below. The **Destination** IP address is the SIP Server IP address.

Monitor > Log

Priority	Category	Message	Source	Destination	Note
alert	Security Policy Control	priority:1, from ANY to ANY, UDP, service SIP, ACCEPT	192.168.100.2:5060	172.124.163.150:5060	ACCESS FORWARD

Go to the ZyWALL/USG **Monitor > Traffic Statics** and review the SIP traffic and other services to optimize the **Guaranteed** and **Maximum BW** of bandwidth consuming services.

Monitor > Traffic Statics

#	Service Port	Protocol	Direction	Amount
1	sip(Port : 5060)	UDP	Ingress	 10.137(MBytes)
2	sip(Port : 5060)	UDP	Egress	 10.138(MBytes)
3	ftp(Port : 21)	TCP	Ingress	 863(Bytes)
4	ftp(Port : 21)	TCP	Egress	 807(Bytes)
5	https(Port : 443)	TCP	Ingress	 29.716(KBytes)
6	www(Port : 80)	TCP	Egress	 1.196(KBytes)

What Could Go Wrong?

If you see [alert] log message such as below, the voice traffic is blocked by the priority 1 **Security Policy**. The ZyWALL/USG checks the security policy in order and applies the first security policy the traffic matches. If the voice traffic matches a policy that comes earlier in the list, it may be unexpectedly blocked. Please change your policy setting or move the voice traffic policy to the higher priority.

Monitor > Log

Priority	Category	Message	Source	Destination	Note
alert	Security Policy Control	priority:1, from ANY to ANY, UDP, service others, DROP	192.168.100.2:5060	172.124.163.150:5060	ACCESS BLOCK
alert	Security Policy Control	priority:1, from ANY to ANY, UDP, service others, DROP	192.168.100.2:5060	172.124.163.150:5060	ACCESS BLOCK

How to Manage ZyWALL/USG Configuration Files

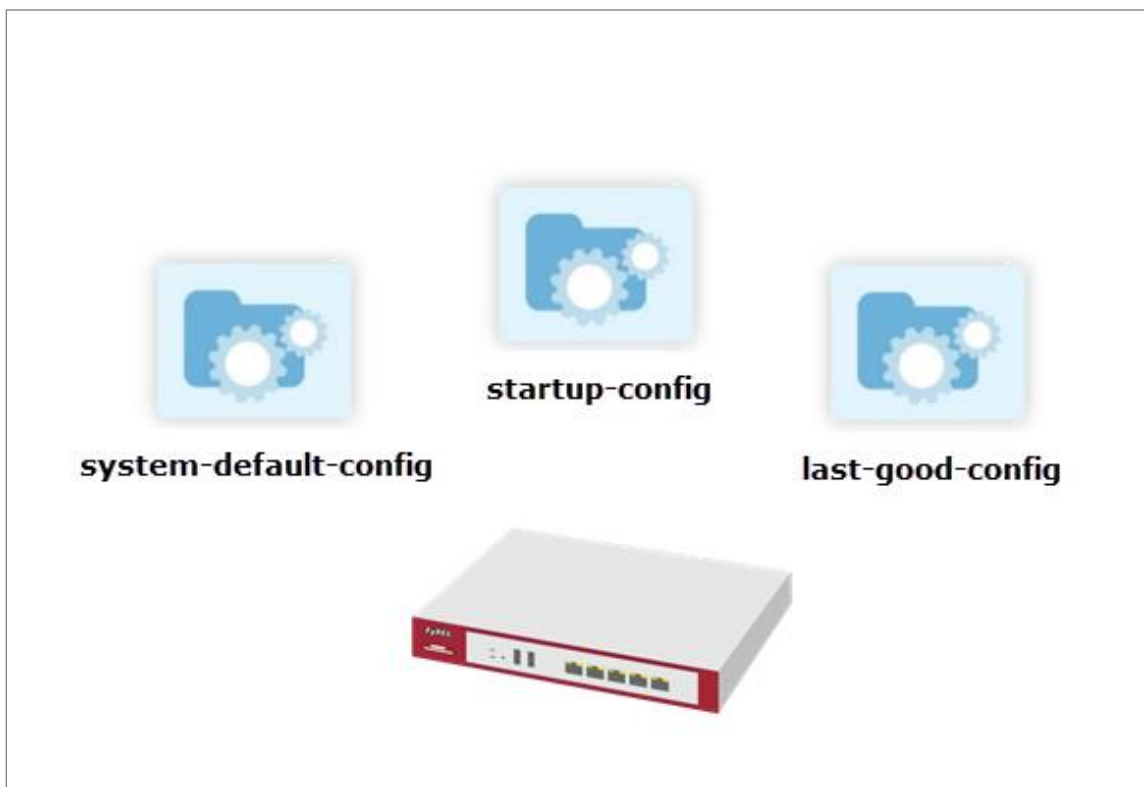

This is an example of how to rename, download, copy, apply and upload configuration files. Once your ZyWALL/USG is configured and functioning properly, it is highly recommended that you back up your configuration file before making further configuration changes. The backup configuration file will be useful in case you need to return to your previous settings.

The **system-default.conf** file contains the ZyWALL/USG's default settings. This configuration file is included when you upload a firmware package.

The **startup-config.conf** file is the configuration file that the ZyWALL/USG is currently using. If you make and save changes during your management session, the changes are applied to this configuration file.

The **lastgood.conf** is the most recently used (valid) configuration file that was saved when the device last restarted.

ZyWALL/USG with Configuration Files Example

 Note: This example was using USG310 (Firmware Version: ZLD 4.25).

Rename the Configuration Files from the ZyWALL/USG

In the ZyWALL/USG, go to **MAINTENANCE > File Manager > Configuration File**, select the configuration file and click **Rename**. A pop-up screen will appear allowing you to edit the **Target file** name. Click **OK** to save the **Rename** configuration.

MAINTENANCE > File Manager > Configuration File

#	File Name	Size	Last Modified
1	startup-config.conf	36582	2017-07-07 07:23:22
2	430ABFC0a4-2017-07-03-06-54-...	13040	2017-07-03 06:54:24
3	lastgood.conf	36582	2017-07-07 07:23:22
4	system-default.conf	32927	2017-06-09 12:39:03
5	autobackup-4.30.conf	13040	2017-07-03 06:56:16
6	startup-config-bad.conf	17406	2017-07-05 08:44:06

MAINTENANCE > File Manager > Configuration File > Rename

Rename

Source file : [autobackup-4.30.conf](#)

Target file :

OK **Cancel**

Download the Configuration Files on the ZyWALL/USG

In the ZyWALL/USG, go to **MAINTENANCE > File Manager > Configuration File**, select the configuration file and click **Download** to back up your configuration file from ZyWALL/USG to your computer.

MAINTENANCE > File Manager > Configuration File

#	File Name	Size	Last Modified
1	startup-config.conf	36582	2017-07-07 07:23:22
2	430ABFC0a4-2017-07-03-06-54-...	13040	2017-07-03 06:54:24
3	lastgood.conf	36582	2017-07-07 07:23:22
4	system-default.conf	32927	2017-06-09 12:39:03
5	autobackup-4.30.conf	13040	2017-07-03 06:56:16
6	startup-config-bad.conf	17406	2017-07-05 08:44:06

Copy the Configuration Files on the ZyWALL/USG

In the ZyWALL/USG, go to **MAINTENANCE > File Manager > Configuration File**, select the configuration file and click **Copy**. A pop-up screen will appear allowing you to edit the **Target file** name. Click **OK** to save the **Copy** configuration.

MAINTENANCE > File Manager > Configuration File

#	File Name	Size	Last Modified
1	startup-config.conf	36582	2017-07-07 07:23:22
2	430ABFC0a4-2017-07-03-06-54-...	13040	2017-07-03 06:54:24
3	lastgood.conf	36582	2017-07-07 07:23:22
4	system-default.conf	32927	2017-06-09 12:39:03
5	autobackup-4.30.conf	13040	2017-07-03 06:56:16
6	startup-config-bad.conf	17406	2017-07-05 08:44:06

MAINTENANCE > File Manager > Configuration File > Copy

Source file : startup-config.conf
 Target file : startup-config(1).conf

OK Cancel

Apply the Configuration Files on the ZyWALL/USG

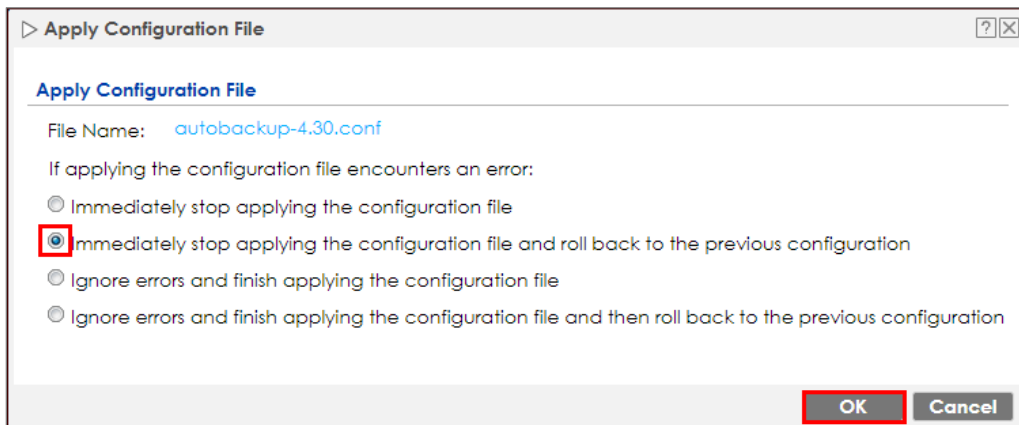

In the ZyWALL/USG, go to **MAINTENANCE > File Manager > Configuration File**, select a specific configuration file to have ZyWALL/USG use it. For example, select the **system-default.conf** file and click **Apply** to reset all of the ZyWALL/USG settings to the factory defaults. Or select the **lastgood.conf** which is the most recently used (valid) configuration file that was saved when the device last restarted. If you uploaded and applied a configuration file with an error, select this file then click **Apply** to return to a valid configuration.

MAINTENANCE > File Manager > Configuration File

#	File Name	Size	Last Modified
1	startup-config.conf	36582	2017-07-07 07:32:04
2	430ABFC0a4-2017-07-03-06-54-...	13040	2017-07-03 06:54:24
3	lastgood.conf	36582	2017-07-07 07:23:22
4	system-default.conf	32927	2017-06-09 12:39:03
5	autobackup-4.30.conf	13040	2017-07-03 06:56:16
6	startup-config-bad.conf	17406	2017-07-05 08:44:06

A pop-up screen will appear allowing you to edit the **Target file** name. Select **Immediately stop applying the configuration file and roll back to the previous configuration** to get the ZyWALL/USG started with a fully valid configuration file as quickly as possible. Click **OK** to have the ZyWALL/USG start applying the configuration file.

MAINTENANCE > File Manager > Configuration File > Apply Configuration File

 Note: Do not shut down the ZyWALL/USG while the configuration file is being applied.

Upload the Configuration Files from the ZyWALL/USG

In the ZyWALL/USG, go to **MAINTENANCE > File Manager > Configuration File > Upload Configuration File**, select **Browse** to upload a new or previously saved configuration file from your computer to your ZyWALL/USG. You cannot upload a configuration file named **system-default.conf** or **lastgood.conf**. If you upload **startup-config.conf**, it will replace the current configuration and immediately apply the new settings.

MAINTENANCE > File Manager > Configuration File

What Could Go Wrong?

If you cannot apply a configuration file and the device shows error message, go to **Monitor > Log** to check the [alert] log message and make the correction of the

configuration file. In this example, the [alert] log message shows the configuration file has an incomplete static DHCP address so that the device can't apply it.

MAINTENANCE > File Manager > Configuration File > Apply Configuration File

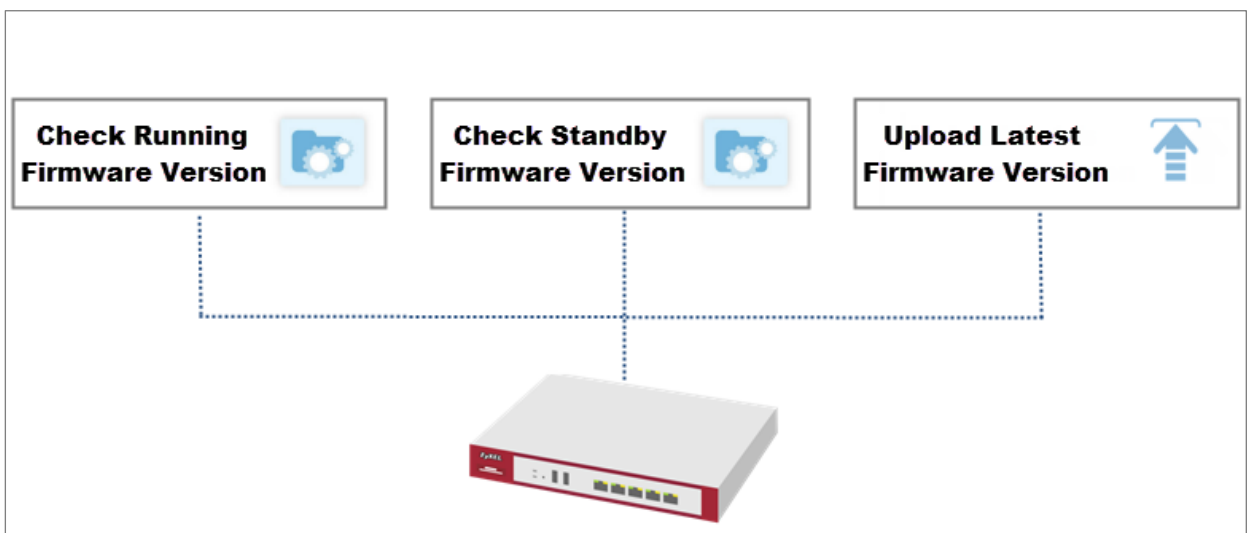

Monitor > Log

Priority	Category	Message	Note
alert	File Manager	Going to rollback previous running-config.	Apply Config
alert	File Manager	ERROR: #configure terminal interface _ether dmz ip address 192.168.3.1 255....	Apply Config

How to Manage ZyWALL/USG Firmware

This is an example of using ZyWALL/USG to check your current firmware version and upload firmware to the ZyWALL/USG. You can upload firmware to be the **Running** firmware or **Standby** firmware.

ZyWALL/USG with Firmware Management Example

 Note: The firmware update can take up to five minutes. Do not turn off or reset the ZyWALL/USG while the firmware update is in progress. This example was using USG110 (Firmware Version: ZLD 4.25).

Download the Current Firmware Version from ZyXEL.com

Go to www.zyxel.com/support/download_landing.shtml and download the current firmware package.

The screenshot shows a search interface titled "Search by Model Number". It features a search input field containing "USG110" and a search button. Below the input field, a dropdown menu is open, showing two results: "USG110" and "USG1100". The "USG110" result is highlighted with a red border. To the right of the search input, there is a link that says "Don't know the product model number?" with a button labeled "How to Find Model Number".

Material	Version	Checksum	Release Date	Release Note	Download
Firmware	4.15(AAPH.0)C0		Mar 25, 2016		
3G Dongle Document	3		Mar 26, 2015		

Extract firmware zip file.

Upload the Firmware on the ZyWALL/USG

In the ZyWALL/USG, go to **MAINTENANCE > File Manager > Firmware Package > Upload File**. Click the **To upload image file in system space** pull-down menu and select **(1)** or **(2)**. The default **Standby** system space is **(2)**, so if you want to upload new firmware to be the **Running** firmware, then select the **Running** system space

(1). The ZyWALL/USG will reboot automatically.

If you upload firmware to the **Standby** system space (2), you have the option to select **Reboot now** or **Don't Reboot**.

MAINTENANCE > File Manager > Firmware Package > Upload File > (1)

Firmware Status

Reboot now

#	Status	Model	Version	Released Date

After reboot process complete, the **Running** system space will be (2). **Standby** system space will be (1).

What Could Go Wrong?

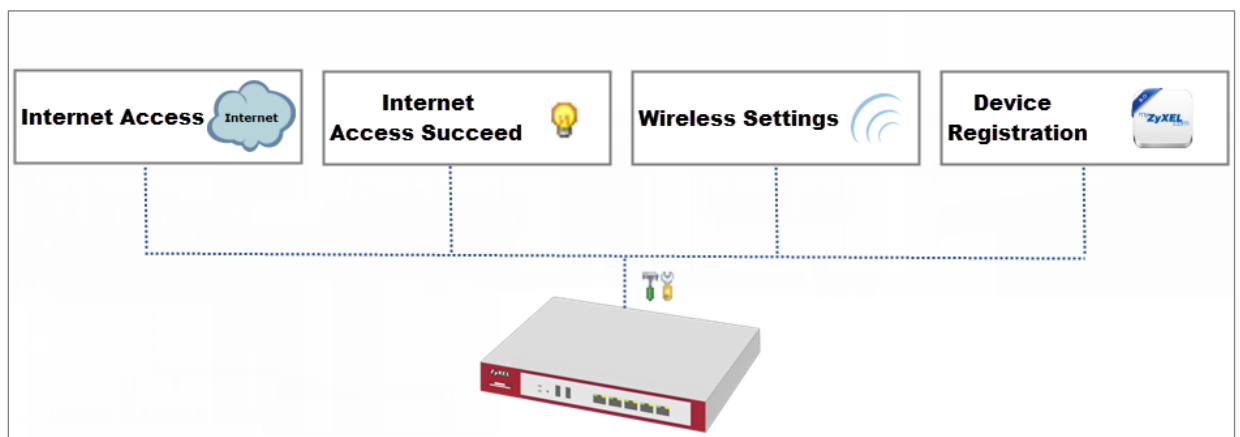

If you cannot download the firmware, please check if you enable the **Destroy compressed files that could not be decompressed** function in **Anti-Virus**.

ZyWALL/USG firmware package is ZIP file, the ZyWALL/USG classifies the firmware package as not being able to decompress will delete it. Please disable this option while downloading the firmware package.

How to Get Started Using the Wizards

When you log into the Web Configurator for the first time or when you reset the ZyWALL/USG to its default configuration, the **Installation Setup Wizard** screen displays. This is an example of using ZyWALL/USG Wizards to configure Internet connection settings, wireless settings and device registration services.

ZyWALL/USG with Installation Setup Wizard Example

 Note: You need internet access to activate your ZyWALL/USG subscription services. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the Internet Access (Ethernet) Wizard on the ZyWALL/USG

In the ZyWALL/USG **Installation Setup Wizard** Welcome page, click **Next** to start configuring. Click the double arrow in the upper right corner to display (<<) or hide (>>) the help.

Installation Setup Wizard > Welcome

In the **Internet Access** page, you can configure Internet connections from two Internet service providers (ISPs). Connect your ISP devices to your ZyWALL/USG WAN port, select **I have two ISPs** if you want to configure two Internet connections

or leave it cleared to configure just one.

Choose the **Encapsulation** option to be **Ethernet**, leave **Zone** as default setting Internet connection belongs to the WAN zone.

In the **IP Address Assignment** section, select **Auto** if your ISP did not assign you a fixed IP address or select **Static** if your ISP did assign you a fixed IP address. Click **Next**.

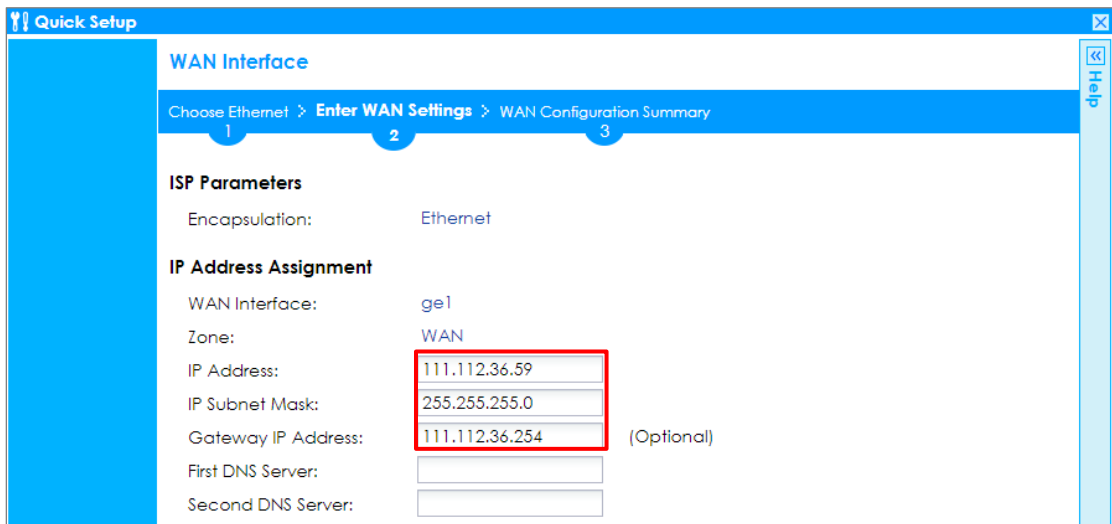

Installation Setup Wizard > Welcome > Internet Access

The image displays three sequential screenshots of the ZyXel Quick Setup wizard's 'Internet Access' section. Each screenshot shows a progress bar with three steps: 1. Choose Ethernet, 2. Enter WAN Settings, and 3. WAN Configuration Summary.

- First Screenshot:** Shows the 'Ethernet' section with 'Ethernet Selection' set to 'ge1'.
- Second Screenshot:** Shows the 'IP Address Assignment' section with 'WAN Type Selection' set to 'Ethernet'.
- Third Screenshot:** Shows the 'Interface' section with 'WAN Interface' set to 'ge1', 'Zone' set to 'WAN', and 'IP Address Assignment' set to 'Static' (highlighted with a red box).

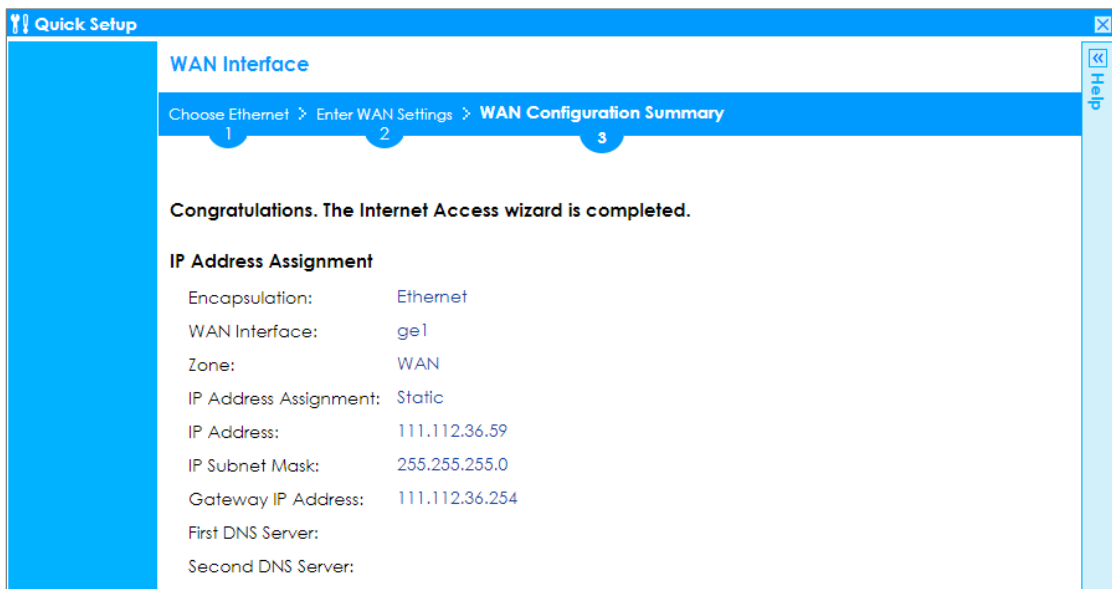

Enter the **IP Address**, **IP Subnet Mask** and **Gateway IP Address** exactly as given by your ISP or network administrator. First/Second DNS Servers are optional. Click **Next**.

Installation Setup Wizard > Welcome > Internet Access

The **Internet Access Succeed** page will display the summary of Internet access of the **First Setting**. If you select **I have two ISPs** in **Internet Access > ISP Setting**, click **Next** to configure the second WAN interface or continue to the **Wireless Settings** page.

Installation Setup Wizard > Welcome > Internet Access > Internet Access Succeed

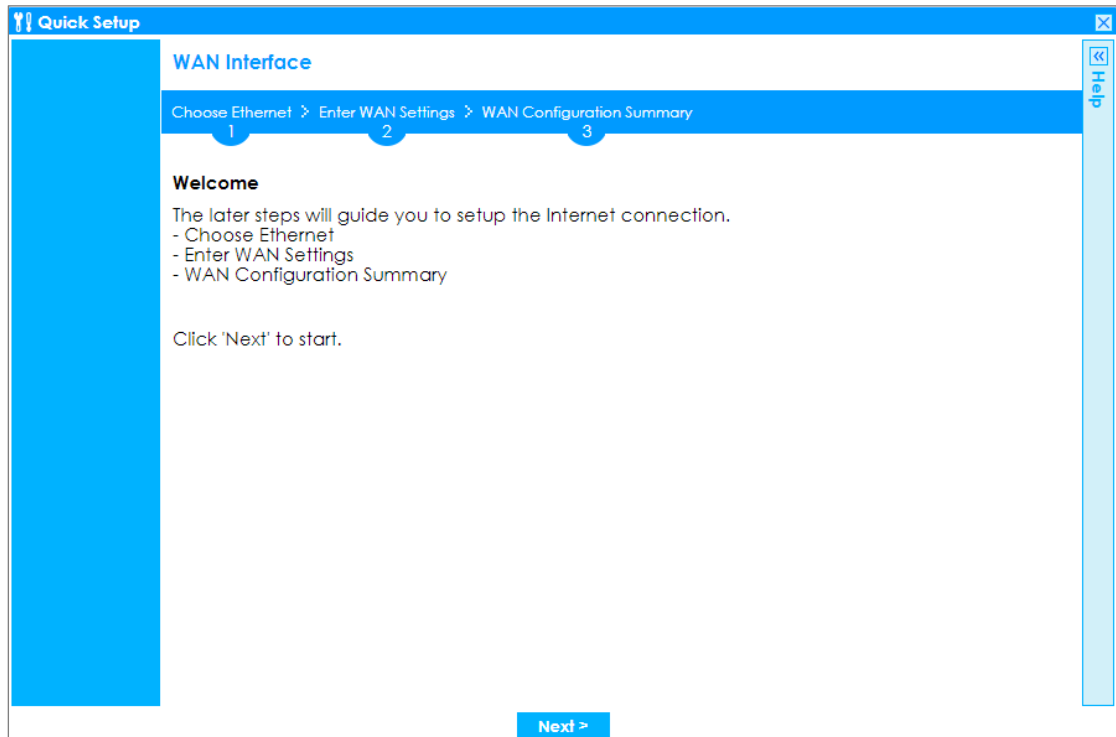

Set Up the Internet Access (PPPoE) Wizard on the ZyWALL/USG

In the ZyWALL/USG **Installation Setup Wizard** Welcome page, click **Next** to start

configuring for Internet. Click the double arrow in the upper right corner to display (<<) or hide (>>) the help.

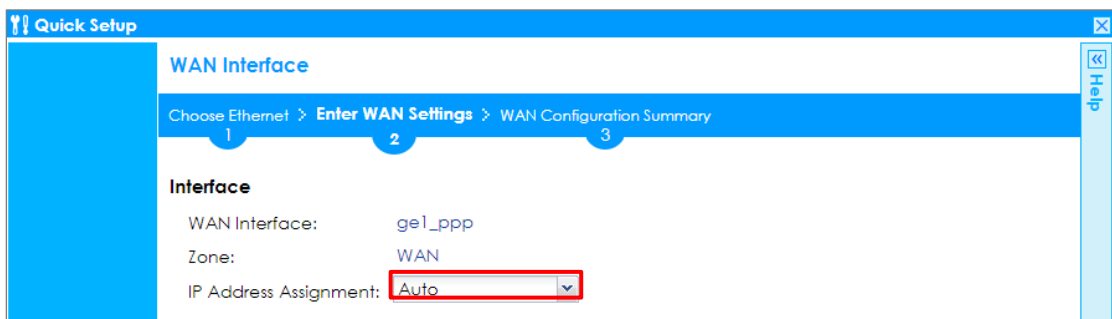

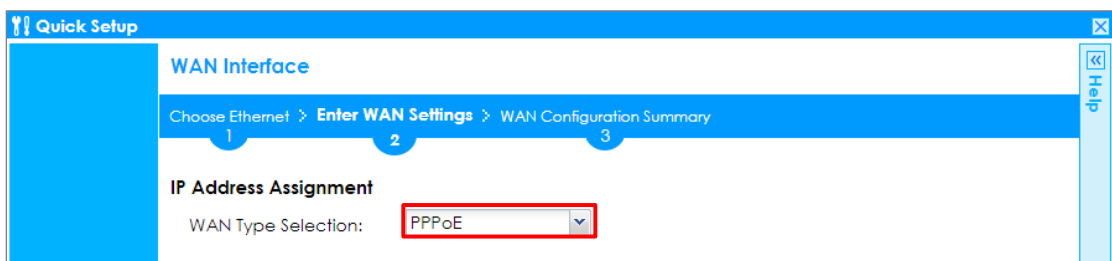

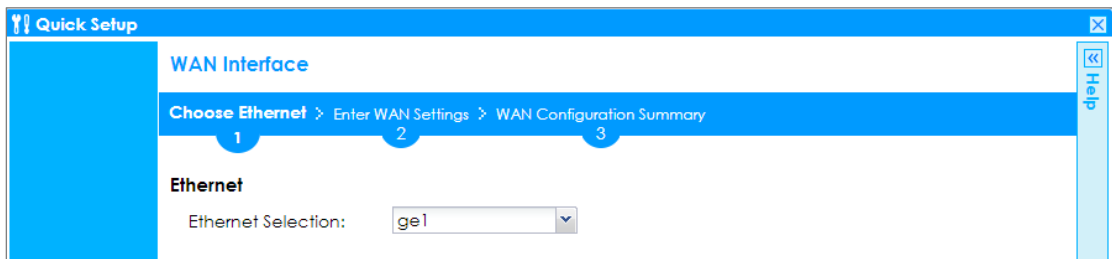

Installation Setup Wizard > Welcome

In the **Internet Access** page, you can configure Internet connections from two Internet service providers (ISPs). Connect your ISP devices to your ZyWALL/USG WAN port, select **I have two ISPs** if you want to configure two Internet connections or leave it cleared to configure just one.

Choose the **Encapsulation** option to be **PPP over Ethernet**, leave **Zone** as default setting Internet connection belongs to the WAN zone. Leave the **IP Address Assignment** section to be the **Auto** and click **Next**.

Installation Setup Wizard > Welcome > Internet Access

Select the **Authentication Type** to be the authentication method by the remote node. Enter the **User Name** and **Password** exactly as given by your ISP or network administrator. Select **Nailed-UP** if you want to keep the connection always up or type the desired **Idle Timeout** value in seconds. Click **Next**.

Installation Setup Wizard > Welcome > Internet Access

< Back Next >

The **Internet Access Succeed** page will display the summary of Internet access of the **First Setting**. If you select **I have two ISPs** in **Internet Access > ISP Setting**, click **Next** to configure the second WAN interface.

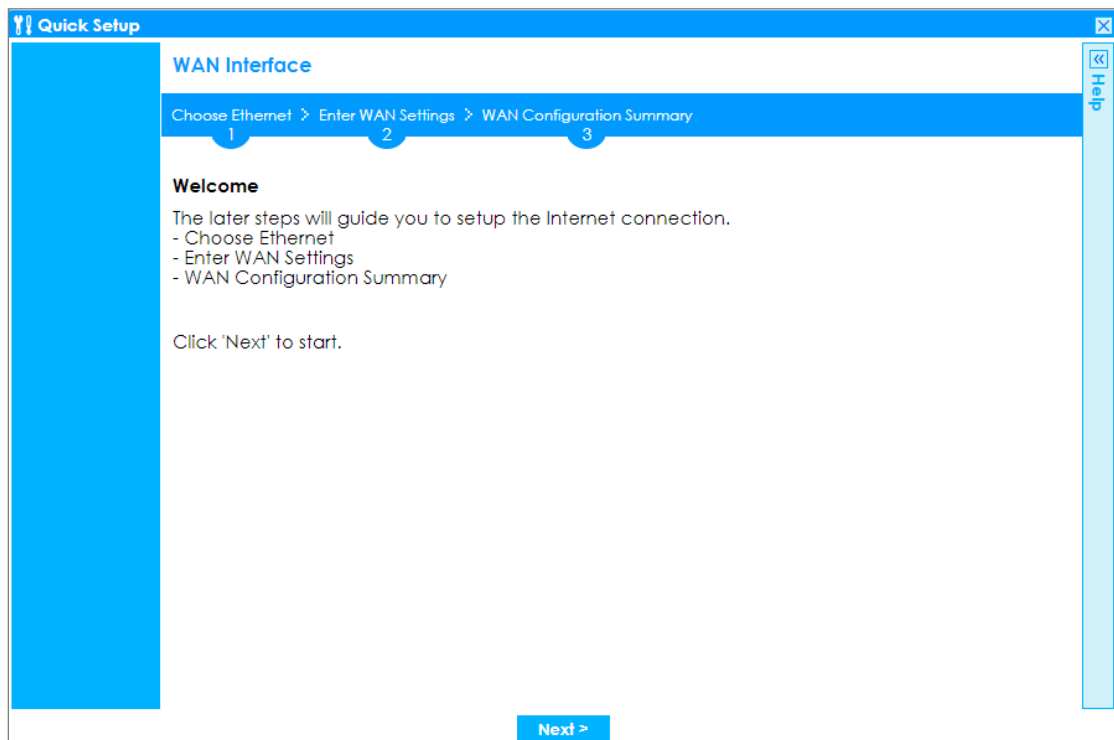

Installation Setup Wizard > Welcome > Internet Access > Internet Access Succeed

Set Up the Wireless Settings Wizard on the ZyWALL/USG

In the **Wireless Settings** page, select **Yes** if you want the ZyWALL/USG to enable AP Controller feature in your network; select **No** if you want to skip this setting. Click **Next**.

Installation Setup Wizard > Welcome > Internet Access > Internet Access Succeed > Wireless Settings

Configure descriptive **SSID** name (1-32 characters) for the wireless LAN. Select **Pre-Shared Key** (8-63 characters) to add security on this wireless network. Otherwise, select **None** to allow any wireless client to associate this network without authentication.

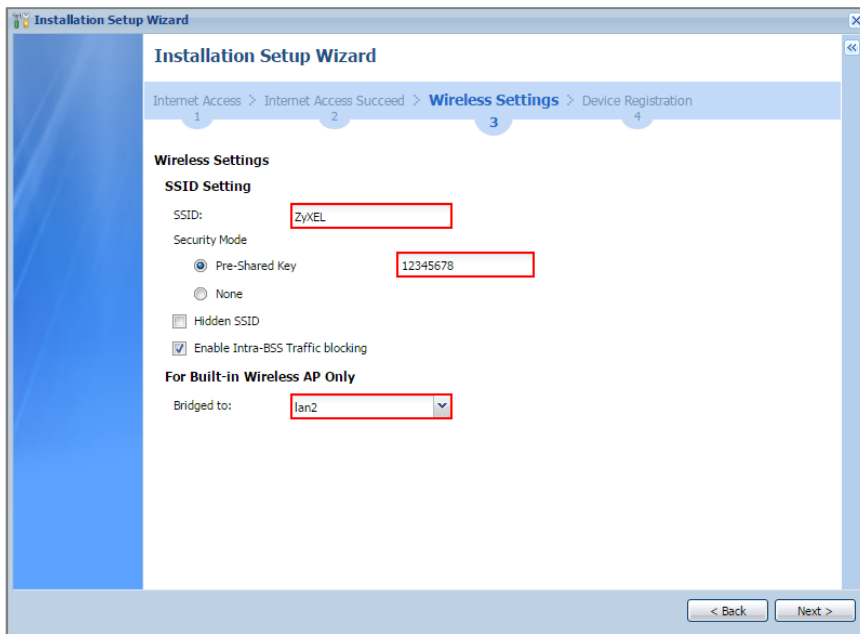

Select **Hidden SSID** to hide the SSID from site tool scanning.

Select **Enable Intra-BSS Traffic blocking** if you want to prevent crossover traffic from within the same wireless network. Wireless clients in that network can still access the wired network but cannot communicate with each other.

For Built-in Wireless AP only, ZyWALL/USGs with **W** in the model name have a built-in AP. Select an interface to bridge with the built-in AP wireless network. Devices connected to this interface will then be in the same broadcast domain as

devices in the AP wireless network.

**Installation Setup Wizard > Welcome > Internet Access > Internet Access Succeed
> Wireless Settings**

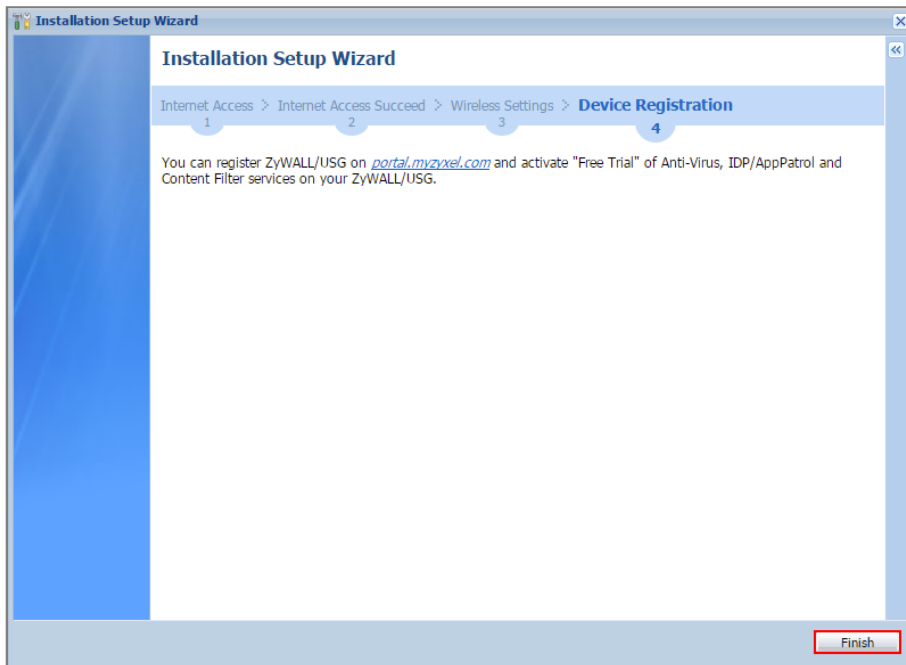

Set Up the Device Registration on the ZyWALL/USG

The ZyWALL/USG must be connected to the Internet in order to register.

Click portal.myzyxel.com to register the device, you need the ZyWALL/USG's serial number and LAN MAC address to register it. See **How To Register Your Device and**

Services at myZyXEL.com for more details. Use the **Configuration > Licensing > Registration > Service** screen to update your service subscription status. Click **Finish**.

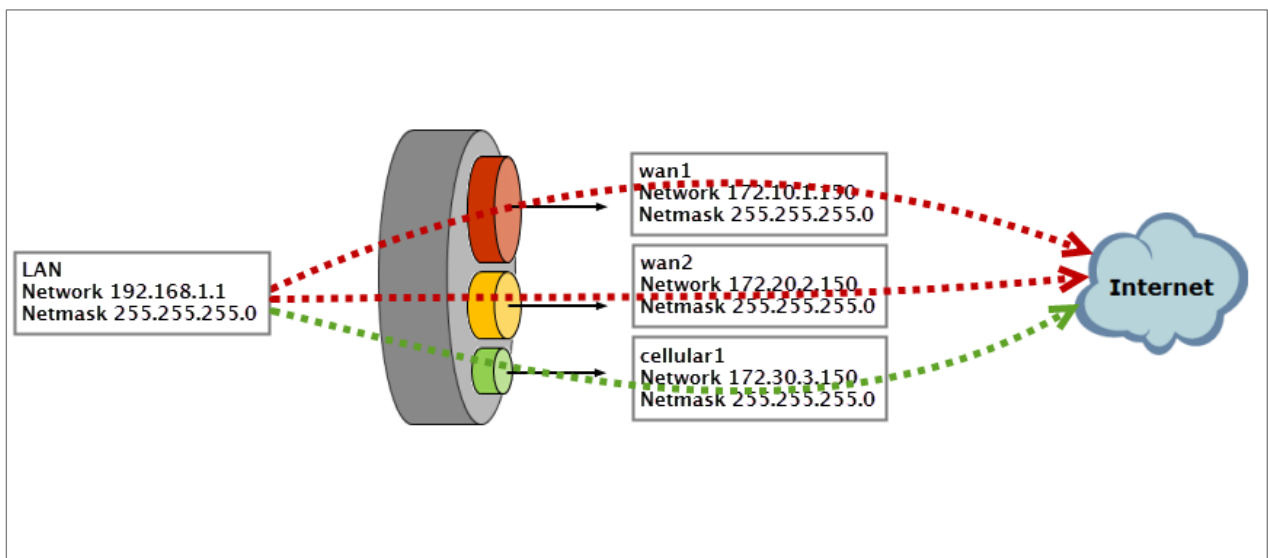

Installation Setup Wizard > Welcome > Internet Access > Internet Access Succeed > Wireless Settings > Device Registration

How to Configure the 3G/LTE Interface on the ZyWALL/USG as a WAN Backup

This is an example of using ZyWALL/USG to configure 3G/LTE interface as a WAN backup that ensures the ZyWALL/USG provides the continuously Internet connections when the primary WAN interface is down. After configuration, it can provide additional mobile broadband WAN connectivity or a redundant link for maximum reliability.

ZyWALL/USG with 3G/LTE Interface as a WAN Backup Example

 Note: This example includes weighted load balancing (Weighted Round Robin) so that most of your Internet traffic is handled by ISP connected to wan1 before it fails over to 3G/LTE.

All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the 3G/LTE Interface on the ZyWALL/USG

Connect a compatible mobile broadband USB device to use a cellular connection.

In the ZyWALL/USG, go to **CONFIGURATION > Network > Interface > Cellular**, the connected device will automatically display in the **Cellular Interface Summary**.

Click **Activate** and then the **Apply** button at the bottom of this page.

CONFIGURATION > Network > Interface > Cellular > Activate

Cellular Interface Summary					
#	Status	Name	Extension Slot	Connected Device	ISP Settings
1		cellular1	USB 1	Huawei E3131	Device Profile 1

Page 1 of 1 | Show 50 items | Displaying 1 - 1 of 1

The default **Connectivity** method is **Nailed-Up**. The connection should always be up after you activate the cellular interface. You can click **Edit** and go to the **Connectivity** section to clear the **Nailed-Up** check box to have the ZyWALL/USG to establish the connection only when there is traffic.

CONFIGURATION > Network > Interface > Cellular > Connect

Cellular Interface Summary					
#	Status	Name	Extension Slot	Connected Device	ISP Settings
1		cellular1	USB 1	Huawei E156G	

Page 1 of 1 | Show 50 items | Displaying 1 - 1 of 1

CONFIGURATION > Network > Interface > Cellular > Edit

Connectivity	
<input checked="" type="checkbox"/>	Nailed-Up

Set Up the Trunk on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Network > Interface > Trunk > User Configuration > Add Trunk**, configure a **Name** for you to identify the Trunk profile and set the **Load Balancing Algorithm** field to be the **Weighted Round Robin**.

Add **wan1** and enter **3** in the **Weight** column. Add **wan2** and enter **2** in the **Weight** column. Add **cellular1**, change **Mode** to be the **Passive** mode, enter **1** in the **Weight** column. Click **OK** to return to the **Configuration** screen.

CONFIGURATION > Network > Interface > Trunk > User Configuration > Add Trunk

Edit WAN_backup

Name: WAN_backup

Load Balancing Algorithm: Weighted Round Robin

#	Member	Mode	Weight
1	ge1	Active	1
2	cellular1	Passive	0
3	ge2	Active	2

Page 1 of 1 Show 50 items Displaying 1 - 3 of 3

In the **Configuration** screen, go to **Default WAN Trunk** section, select **User Configured Trunk** and select the newly created Trunk from the list box. Click **Apply**.

CONFIGURATION > Network > Interface > Trunk > Default WAN Trunk > User Configured Trunk

Default WAN Trunk

Advance

Default Trunk Selection

SYSTEM_DEFAULT_WAN_TRUNK
 User Configured Trunk: WAN_Backup

Test the Result

Check the **Interface Statistics** when wan1 and wan2 connections are up. You can see both wan1 and wan2 **Status** are up, **Tx B/s** displays the transmission speed and **Rx B/s** displays the reception speed; cellular1 **Status** is connected but there is no traffic going through this interface.

MONITOR > Interface Status > Interface Statistics

Interface Statistics

Name	Status	TxPkts	RxPkts	Tx B/s	Rx B/s
wan1	1000M/Full	359860	1314443	2587	1152
wan2	100M/Full	2438	23927	192	64
ge3	Down	0	0	0	0
ge4	Down	0	0	0	0
ge5	Down	0	0	0	0
ge6	Down	0	0	0	0
ge7	Down	0	0	0	0
ge8	Down	0	0	0	0
cellular1	Connected	0	0	0	0

After disconnecting both wan1 and wan2, you can see both wan1 and wan2 **Status** are **Down** and no traffic goes through these two interfaces. The backup cellular1 **Status** is connected and all the traffic is going through this interface.

MONITOR > Interface Status > Interface Statistics

Interface Statistics						
Refresh						
Name	Status	TxPkts	RxPkts	Tx B/s	Rx B/s	
+ ge1	Down	0	0	0	0	
+ ge2	1000M/Full	6764	35208	0	0	
+ ge3	Down	1	0	0	0	
+ ge4	Down	2	0	0	0	
+ ge5	Down	1	0	0	0	
+ ge6	Down	2	0	0	0	
+ ge7	Down	1	0	0	0	
+ ge8	Down	1	0	0	0	
- cellular1	Connected (00:10:34)	164	119	0	0	

What Could Go Wrong?

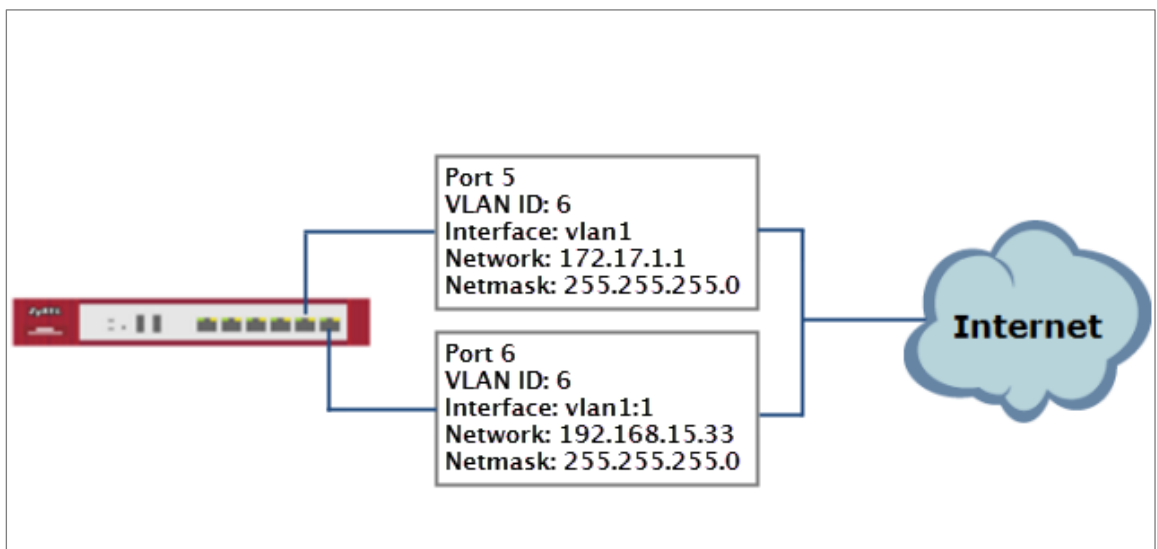

If there is no traffic going through cellular interface when other interfaces are down, please make sure you have a compatible mobile broadband device installed or connected. Go to

http://www.zyxel.com/support/download_landing.shtml and see the **3G Dongle Document** to check the compatible mobile broadband devices. Also, make sure the cellular interface is enabled and the cellular interface has the correct user name, password, and PIN code configured with the correct casing.

How to Configure Two Different WAN Interfaces with Different IP Addresses in the Same VLAN

This is an example of using ZyWALL/USG to configure two different WAN interfaces with different IP addresses in the same VLAN. After configuration, you can have the same VLAN ID for two different WAN interfaces.

ZyWALL/USG with Two Different WAN Interfaces with Different IP Addresses in the Same VLAN Example

 Note: This example requires the ZyWALL/USG models which can apply port grouping. All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using ZyWALL USG300 (Firmware Version: ZLD 4.25).

Set Up the Port Grouping on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Network > Interface > Port Grouping**, select the ports that you want to assign to a representative Interface (in this example, **Port 4** and **Port 5** are configured as **ge5**).

CONFIGURATION > Network > Interface > Port Grouping

Set Up the VLAN on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Network > Interface > VLAN**. Set **Interface Type** to be **External**. Set **Zone** to be **WAN**, configure **Base Port** to be **ge5**. Enter the **VLAN ID** and configure the fixed IP address (172.17.1.1/24 in this example). Click **OK** to go back to the **Configuration** page.

CONFIGURATION > Network > Interface > VLAN

General Settings

Enable Interface

Interface Properties

What Could Go Wrong?

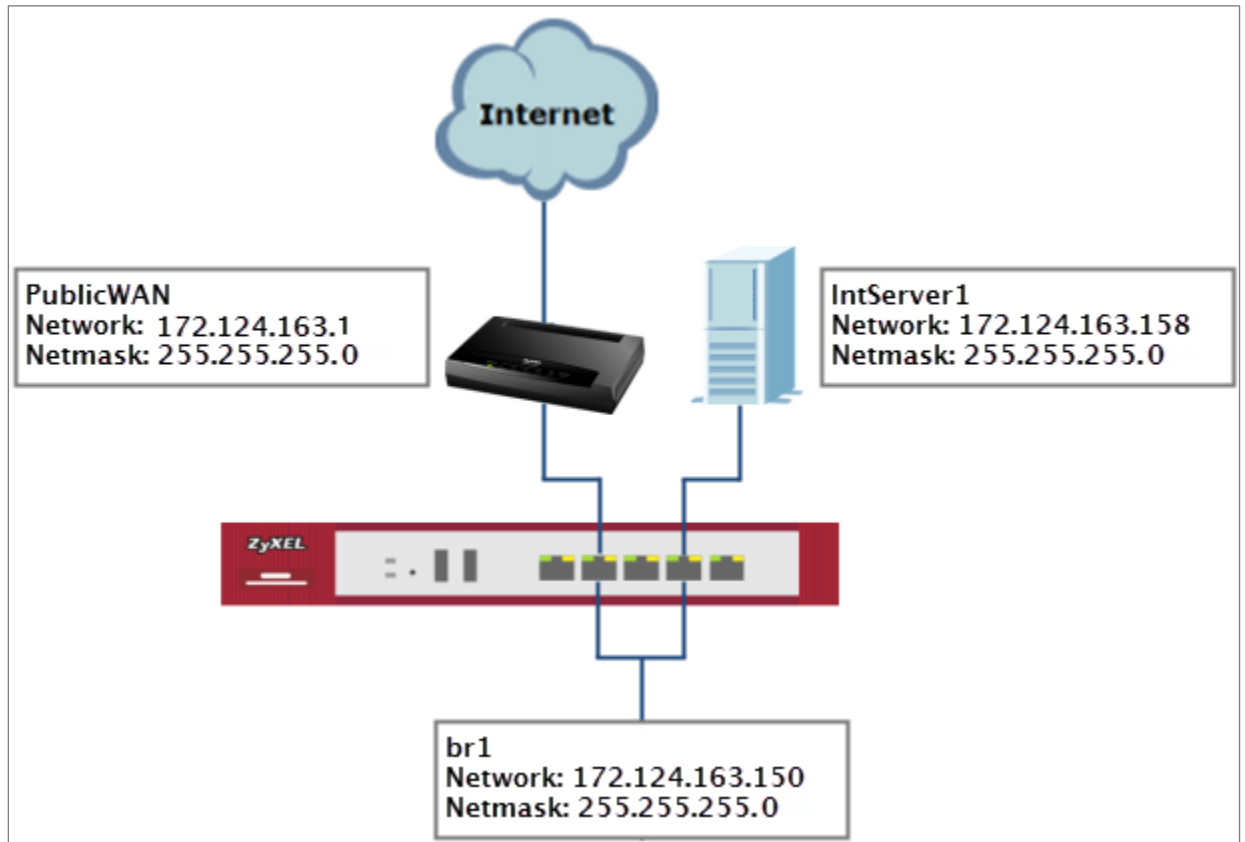

If you cannot configure a particular VLAN interface on top of an Ethernet interface, please whether this VLAN has just been created on top of other Ethernet interface.

How to Let a Server Use the Same Public IP Address as the WAN Interface Using the Bridge Interface

This is an example of using ZyWALL/USG to configure an internal server in bridge mode without applying network address translation (NAT). The Internet users can

reach this server directly by its public IP address.

ZyWALL/USG with Bridge Interface Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the Bridge Interface on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Network > Interface > Bridge > add**

Bridge, select **Interface Type** to be the **general** type, select **Zone** to be the **LAN** zone. In the **Member Configuration**, select internal server (**IntServer1** interface in this example) and public IP address (**Public WAN** interface in this example) to be in the same member group.

In the **IP Address Assignment** section, select **Used Fixed IP Address** and configure br1 IP address (172.124.163.150/24 in this example).

CONFIGURATION > Network > Interface > Bridge > add Bridge

General Settings

Enable Interface

Interface Properties

Interface Type: general ⓘ

Interface Name:

Zone: LAN ⓘ

- br1	Up	14	618	0	0	

Server can access Internet successfully by using its IP address (172.124.163.158 in this example) and Internet users can also reach this server by this public address as well.

Windows 7 > cmd > ping 172.124.163.158

```
C:\Documents and Settings\ZyXEL-CS0>ping 172.124.163.158

Pinging 172.124.163.158 with 32 bytes of data:

Reply from 172.124.163.158: bytes=32 time=37ms TTL=44
Reply from 172.124.163.158: bytes=32 time=26ms TTL=44
Reply from 172.124.163.158: bytes=32 time=32ms TTL=44
Reply from 172.124.163.158: bytes=32 time=22ms TTL=44

Ping statistics for 172.124.163.158:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms
```

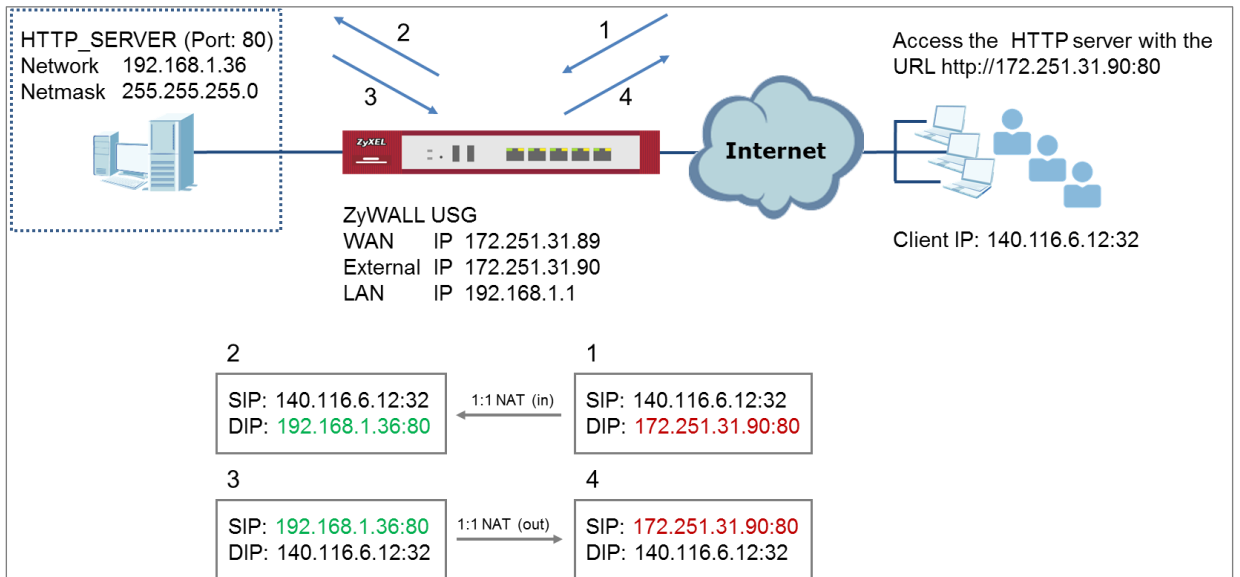

What Could Go Wrong?

If you cannot configure a particular bridge IP address, please check if this IP address already created on other Ethernet interface.

How to Allow Public Access to a Server Behind ZyWALL/USG

This is an example of using ZyWALL/USG to configure a securely access to internal server behind ZyWALL/USG with network address translation (NAT). The Internet users can reach this server directly by its public IP address and a NAT mapping rule will forward the traffic from the Internet to the Intranet. It provides security and decrease the number of IP addresses an organization needs.

ZyWALL/USG enables Public Access to a Server with NAT

Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the NAT on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Network > NAT > add NAT**, select **Enable Rule**. Select **1:1 NAT**. Set **Incoming Interface** to be the **wan1** interface. Type **User-Defined Original IP (172.251.31.90 in this example)** and type **User-Defined Mapped IP (192.168.1.34 in this example)**. Set **Port Mapping Type** to **Service**, set **Original Service** and **Mapped Service** to **HTTP** in this example. Click **OK**.
CONFIGURATION > Network > NAT > add NAT

General Settings	
<input checked="" type="checkbox"/> Enable Rule	
Rule Name:	http_server
Port Mapping Type	
Classification:	<input type="radio"/> Virtual Server <input checked="" type="radio"/> 1:1 NAT <input type="radio"/> Many 1:1 NAT
Mapping Rule	
Incoming Interface:	ge1
Original IP:	User Defined
User-Defined Original IP:	172.251.31.90 (IP Address)
Mapped IP:	User Defined
User-Defined Mapped IP:	192.168.1.34 (IP Address)
Port Mapping Type:	any

Set Up the Security Policy on the ZyWALL/USG

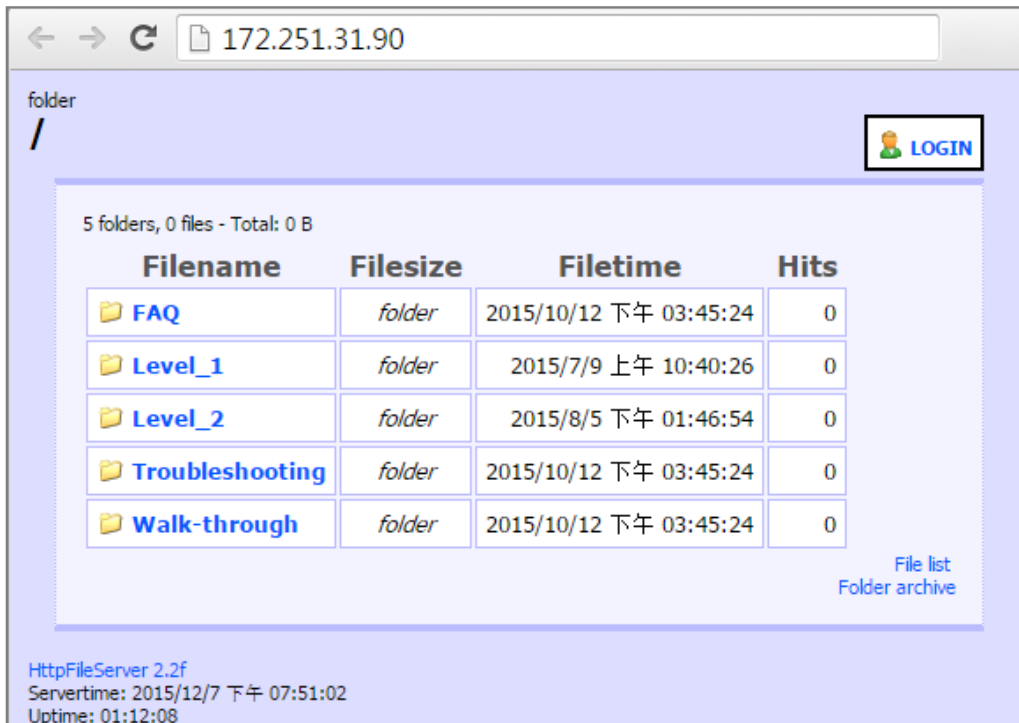

In the ZyWALL/USG, go to **CONFIGURATION > Security Policy > Policy Control > add corresponding**, select **Enable**. Configure a Name for your to identify the security policy (http_server_access in this example). Set **From: WAN** and **To: LAN1**. Set **Destination** to the lan subnet where your server is (LAN_SUBNET_GE3 in this example). Set **Service** to **HTTP**, set **Action** to **allow**. Click **OK**.

CONFIGURATION > Security Policy > Policy Control > add corresponding

<input checked="" type="checkbox"/> Enable	
Name:	http_server_access
Description:	(Optional)
From:	WAN
To:	LAN1
Source:	any
Destination:	LAN_SUBNET_GE4
Service:	HTTP
User:	any
Schedule:	none
Action:	allow
Log matched traffic:	no

Test the Result

Type <http://172.251.31.90/> into the browser, it displays the HTTP service page.

What Could Go Wrong?

If you cannot access your server via public IP address, please make sure all your public IP addresses are routing properly. To do one by one assign them to the ZyWALL's WAN port. Test to make sure you have internet access with the public IP address.

If you cannot access the ZyWALL from the internet with any IP address on your public IP, this is a routing issue on the service end. Please contact the ISP to fix the

routing for the public IPs.

If you see [notice] log message as below, the HTTPS traffic is blocked by the priority 1 Security Policy. The ZyWALL/USG checks the security policy in order and applies the first security policy the traffic matches. If the HTTPS traffic matches a policy that comes earlier in the list, it may be unexpectedly blocked. Please change your policy setting or move the policy to the higher priority.

Monitor > Log

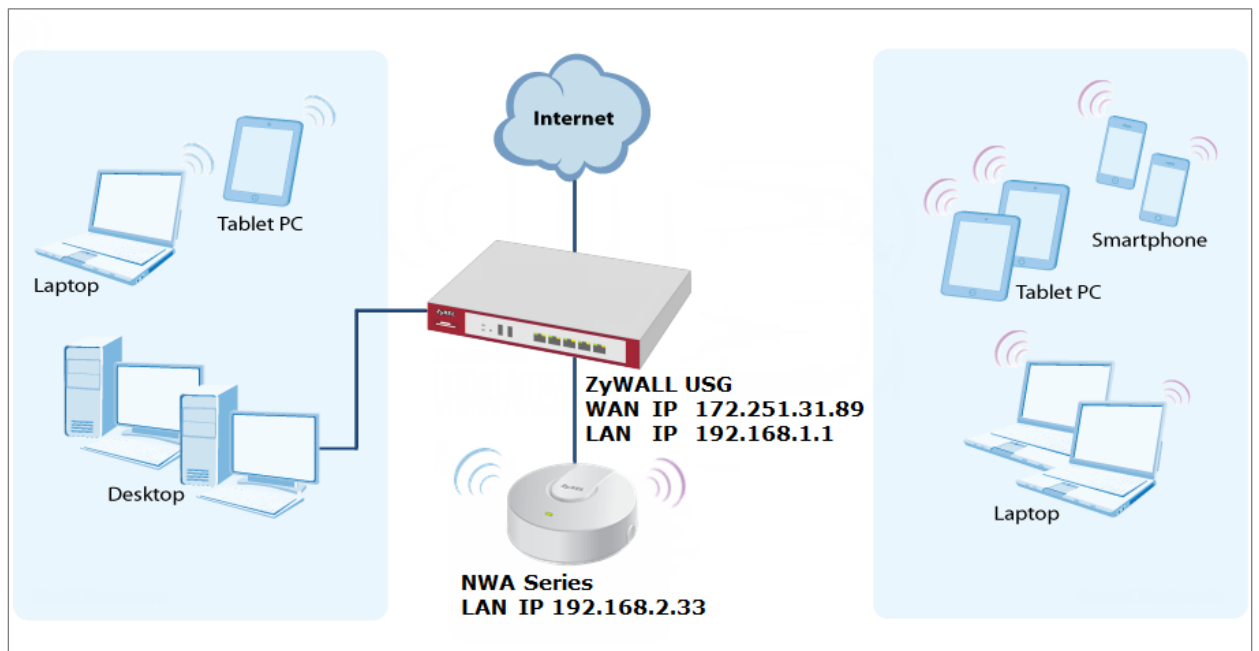

# ^	Priority	Category	Message	Note
1	notice	Security Policy Control	priority:1, from LAN to ANY, TCP, service HTTPS, REJECT [count=3]	ACCESS BLOCK
2	notice	Security Policy Control	priority:1, from LAN to ANY, TCP, service HTTPS, REJECT [count=3]	ACCESS BLOCK

 Note: The default setting of **Security Policy** is without log notification (except **PolicyDefault**), if you want to check which policy may potentially block the traffic, please select this policy and set the **Log matched traffic** to be **log** or **log alert**.

How to Set Up a WiFi Network with ZyXEL APs

This is an example of using ZyWALL/USG to manage the Access Points (APs) and allow wireless access to the network.

ZyWALL/USG as AP Controller Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the AP Management on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Wireless > Controller > Configuration**, set **Registration Type** to **Manual**. This is recommended as the registration mechanism cannot automatically differentiate between friendly and rogue APs.

CONFIGURATION > Wireless > Controller > Configuration

Controller Setting

Country Code:

Registration Type: **Manual** Always Accept

Connect the ZyXEL AP unit to the lan interface.

Go to **MONITOR > Wireless > AP Information > AP List** and the ZyXEL AP is listed. A green question mark displays in the Status column since the AP is not yet managed by the ZyWALL/USG. Select the listed AP and click **Add to Mgmt AP List** on the upper bar.

Monitor > Wireless > AP Information > AP List

350	info	DHCP	Requested 192.168.1.33 from TWNBZT02643-02(30:65:EC:49:85:EA) [count...	DHCP Request

What Could Go Wrong?

If you can't see AP information in the AP List, please check the number of APs connected to the ZyWALL/USG has exceeded the maximum Managed AP number it can support. You can check the maximum support number of each ZyWALL/USG in the Datasheet from ZyXEL Download Library -

http://www.zyxel.com/support/download_landing.shtml

If your mobile device can't find the AP SSID you configured, please go to **CONFIGURATION > Object > AP Profile > SSID > SSID List** and check if the **Hidden SSID** option is enabled.

If your mobile device can't access to the Internet via AP connects to the ZyWALL/USG, please check if the LAN outgoing security policy allow access to the Internet.

If your mobile device is not connected to the AP automatically even you've joined the Wifi network before and you see [Wlan Station Info] log message as shown below, please check if this AP is removed from your mobile device's saved Wifi network list.

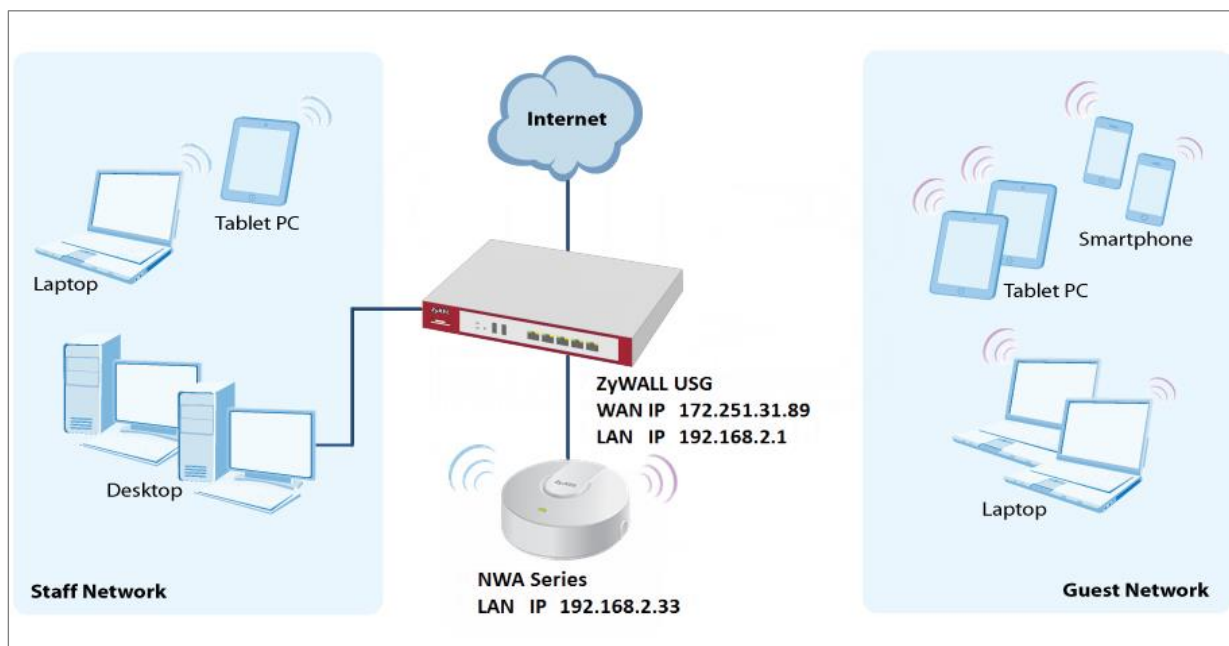

MONITOR > Log

How to Set Up Guest WiFi Network Accounts

This is an example of using ZyWALL/USG to configure guest WiFi accounts to allow limited wireless access to the Internet using only HTTP, HTTPS, and DNS protocols. For the wireless network setup, please see the tutorial about How to Set Up WiFi with ZyXEL AP.

ZyWALL/USG with Guest WiFi Accounts Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the WiFi Guest Account, Address Range and Service Rule on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Object > User/Group > User > Add A User** to configure the **User Name** the guest Wi-Fi user and set **User Type** to **guest**. Set a secured **Password** (4-31 characters) and enter it again for confirmation.

Set the **Authentication Timeout Settings** to be **Use Manual Settings** to enter the number of minutes this user has to renew the current session before the user is logged out.

CONFIGURATION > Object > User/Group > User > Add A User

User Configuration

User Name : WiFi_guest

User Type: User

Password: ****

Retype: ****

Description: Local User

Authentication Timeout Settings: Use Default Settings Use Manual Settings

Lease Time: 240 (0-1440 minutes, 0 is unlimited)

Reauthentication Time: 240 (0-1440 minutes, 0 is unlimited)

In the ZyWALL/USG, go to **CONFIGURATION > Object > Address > Add Address Rule** to create the guest Wi-Fi user access subnet. In this example, AP is connected to ZyWALL/USG LAN interface 192.168.2.0/24. Configure the **Name** for you to identify the Wi-Fi guest subnet. Set the **Network** to be 192.168.2.0 and set the **Netmask** to be 255.255.255.0. Click **OK**.

CONFIGURATION > Object > Address > Add Address Rule

+ Add Address Rule

Name: WiFi_guest

Address Type: SUBNET

Network: 192.168.2.0

Netmask: 255.255.255.0

OK Cancel

In the ZyWALL/USG, go to **CONFIGURATION > Object > Service > Service Group >**

Add Service Group Rule to create the allowed protocols for guest Wi-Fi user. Configure the **Name** for you to identify the **Service Group**. Set **HTTP**, **HTTPS** and **DNS** to be in the same member group and click **OK**.

CONFIGURATION > Object > Service > Service Group > Add Service Group Rule

Configuration

Name:

Description:

Configuration

<p>=== Object ===</p> <ul style="list-style-type: none"> AH AIM AUTH Any_TCP Any_UDP BGP BONJOUR BOOTP CLIENT 	<p>=== Object ===</p> <ul style="list-style-type: none"> HTTP HTTPS <p>=== Group ===</p> <ul style="list-style-type: none"> DNS

Set Up the Web Authentication on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Web Authentication > Web Authentication Policy Summary > Auth. Policy Add** to configure policy to redirect HTTP traffic to the user login screen. Configure the **Description (Optional)** for you to identify the auth. Policy. Then, scroll down the **Source Address** list to choose the newly created **wifi-guest**. Set the **Authentication** to be **required**. Select **Force User Authentication**.

CONFIGURATION > Web Authentication > Web Authentication Policy Summary > Auth. Policy Add

General Settings

Enable Policy

Description: (Optional)

User Authentication Policy

Incoming Interface:

Source Address: SUBNET, 192.168.2.0/24

Destination Address:

Schedule:

Authentication:

Single Sign-on

Force User Authentication i

Authentication Type:

In the ZyWALL/USG, go to **CONFIGURATION > Web Authentication > General Settings** and select **Enable Web Authentication**.

CONFIGURATION > Web Authentication > General Settings

Global Setting

Enable Web Authentication

Set Up the Security Policy on the ZyWALL/USG

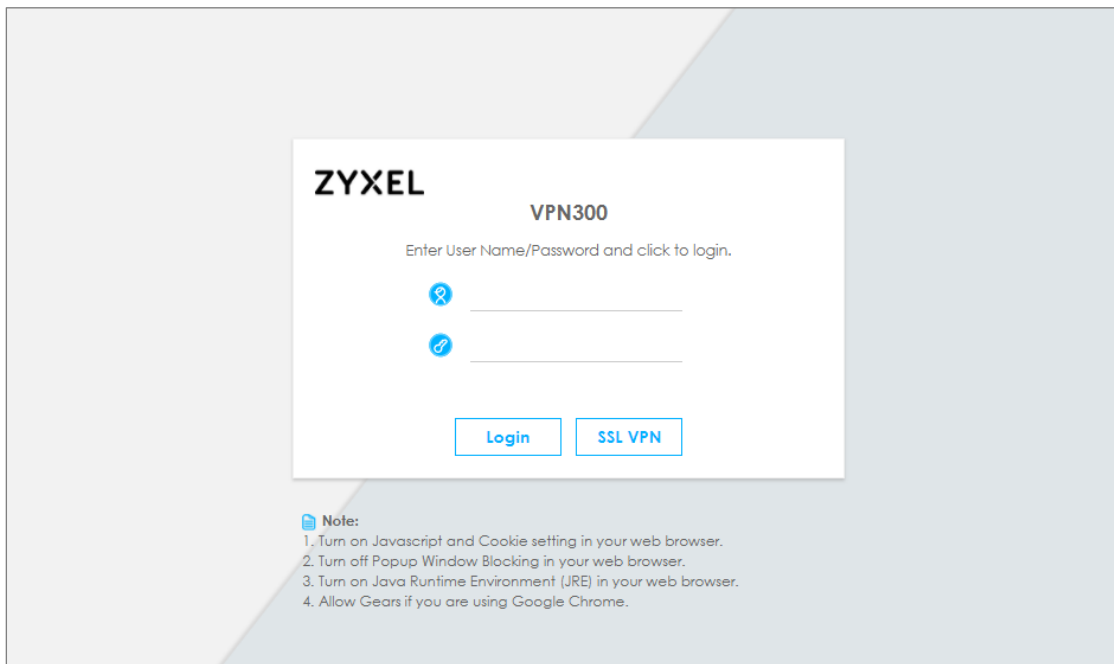

In the ZyWALL/USG, go to **CONFIGURATION > Security Policy > Policy > Add corresponding**. Configure a **Name** for you to identify the **Security Policy** profile. Set **From: LAN** and **To: any (Excluding ZyWALL)**. Set **Service** to be the Service Group Rule (wifi_guest_access in this example). Set **User** to be the Wi-Fi guest user (wifi_guest_access in this example). Select Log type to **log alert** in order to view the result later.

CONFIGURATION > Security Policy > Policy > Add corresponding

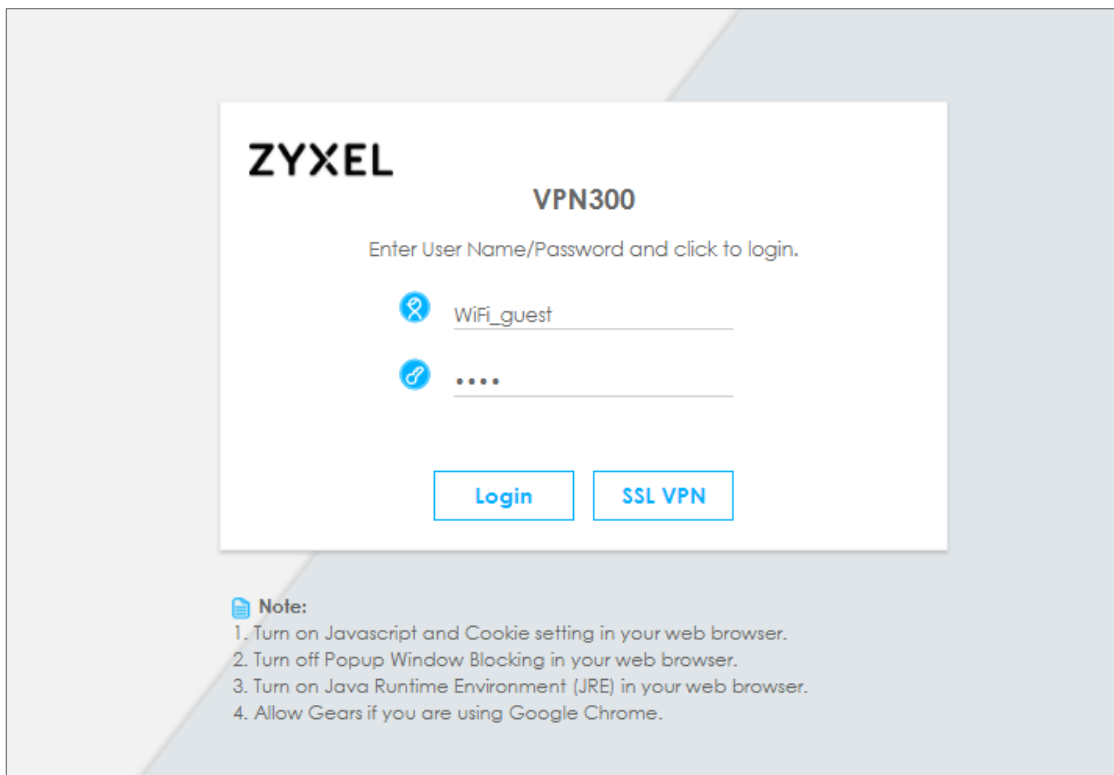

<input checked="" type="checkbox"/> Enable	
Name:	WiFi_guest
Description:	(Optional)
From:	any
To:	any (Excluding ZyV
Source:	any
Destination:	any
Service:	Wifi_guest_access
User:	Wifi_guest
Schedule:	none
Action:	allow
Log matched traffic:	log alert

Test the Result

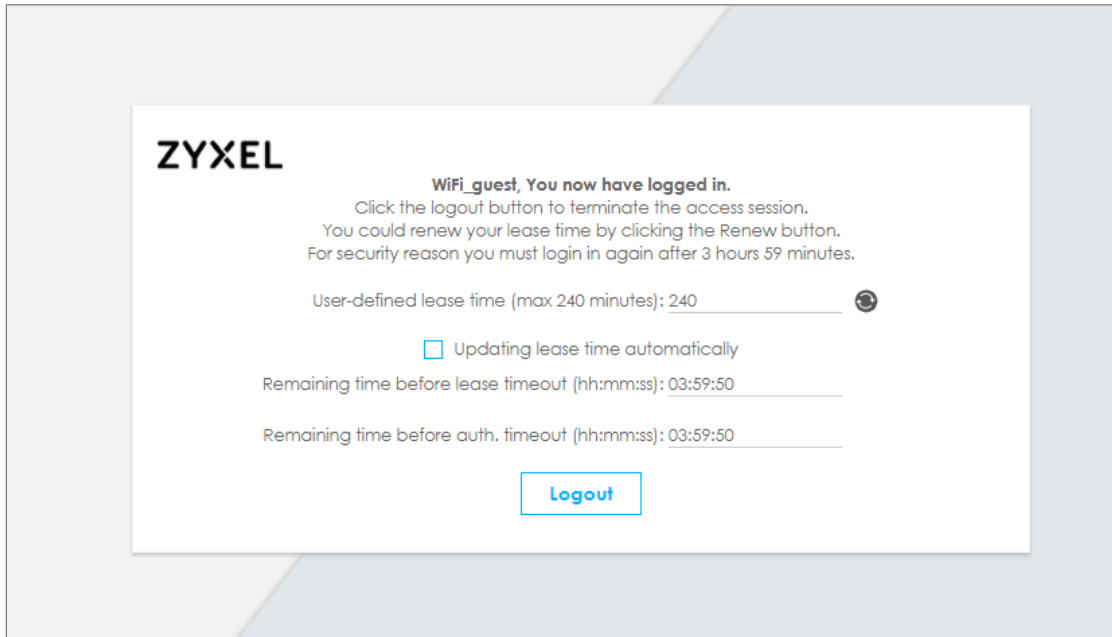

Using a mobile device to connect to the AP which is connected to the ZyWALL/USG. When you try to access the Internet, it will redirect to the user login screen.

Type the Wi-Fi guest **User Name** and **Password**, click **Login**.

The access session page will appear.

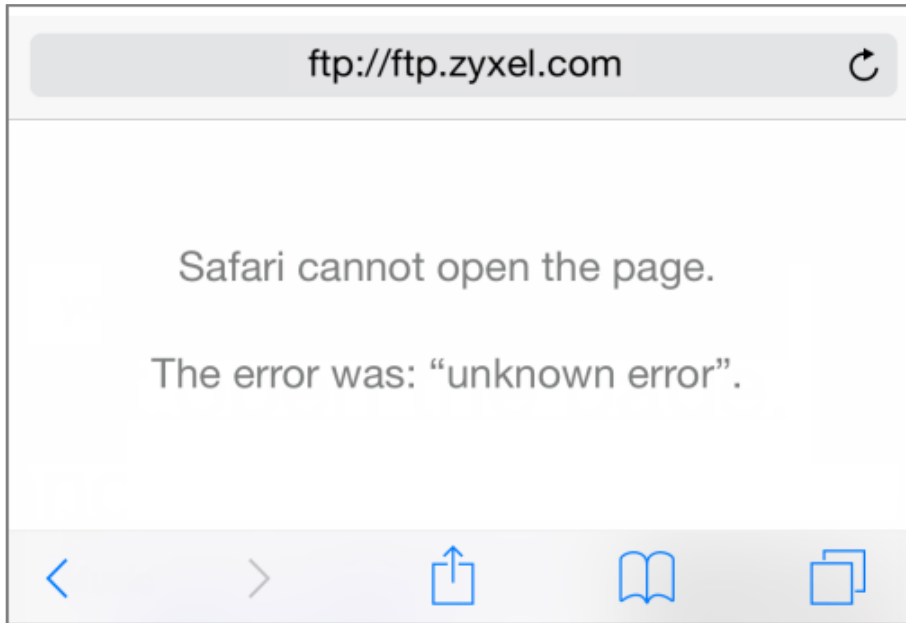

Go to the ZyWALL/USG **Monitor > System Status > Login Users**, you will see current login user list shown as below.

Monitor > System Status > Login Users

User ID	Reauth/Lease Time	Type	IP Address	MAC	User Info
wifi_guest	03:19:30 / 03:19:30	http/https	192.168.2.34	90:3C:92:1C:C5:8B	guest(wifi_guest)

#	User ID	Reauth/Lease Time	Type	IP Address	MAC	User Info
1	WiFi_guest	03:57:03 / 03:57:03	http/https	192.168.2.33	00:1E:33:28:4F:AE	guest(WiFi_guest)

Attempt to access FTP server (prohibited service in this example) and it gets an error message.

Go to the ZyWALL/USG **Monitor > Log**, you will see [notice] log message shown as below. The access to FTP service port 21 is blocked in this example.

Monitor > Log

notice	Security Policy Control	Match default rule, DROP [count=2]	192.168.2.33:56799	36.226.188.36:21	ACCESS BLOCK
--------	-------------------------	------------------------------------	--------------------	------------------	--------------

What Could Go Wrong?

If you see [notice] log shown as below, the Wi-Fi guest traffic is blocked by the **priority 1 Security Policy**. The ZyWALL/USG checks the security policy in order and applies the first security policy to the matched traffic. If the Wi-Fi guest traffic matches a policy that comes earlier in the list, it may be unexpectedly blocked. Please change your policy setting or move the Wi-Fi guest policy to the higher priority.

Monitor > Log

Priority	Category	Message	Source	Destination	Note
notice	Security Policy Control	priority:1, from LAN to ANY, UDP, service Wifi_guest, REJECT	192.168.2.33:52555	172.25.5.210:53	ACCESS BLOCK
notice	Security Policy Control	priority:1, from LAN to ANY, TCP, service Wifi_guest, REJECT...	192.168.2.33:59691	119.161.14.17:443	ACCESS BLOCK

 Note: The default setting of **Security Policy** is without log notification (except **PolicyDefault**), if you want to check which policy may potentially block the traffic, please select this policy and set the **Log matched traffic** to be **log** or **log alert**.

How to create a Wi-Fi VLAN interfaces to separate staff network and Guest network

This example shows how to create Wi-Fi VLAN interfaces to separate staff network and Guest network. Suppose there should be no limitation for the staff network, but restrict the guests not access the USG.

Separate the Staff and Guest network

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG210 (Firmware Version: ZLD 4.25)

Set up Wi-Fi VLAN interfaces

Create VLAN interfaces

Go to **CONFIGURATION > Object > Zone**. Create a zone for the guest.

CONFIGURATION > Object > Zone

The screenshot shows a configuration window titled '+ Add Zone'. Below the title is a section labeled 'Group Members'. Under this section, there is a 'Name:' label followed by a text input field containing the text 'Guest_Zone'.

Go to **CONFIGURATION > Network > Interface > VLAN**. Create VLAN16 for Staff_WiFi and VLAN17 for Guest_WiF

CONFIGURATION > Network > Interface > VLAN > VLAN16

How to Set Up WiFi Networks with Microsoft Active Directory Authentication

This is an example of using ZyWALL/USG to configure guest WiFi accounts with Microsoft Active Directory (AD) to authenticate your WiFi guests. For the wireless network setup, please go to [How to Set Up WiFi with ZyXEL AP](#).

ZyWALL/USG with AD Guest WiFi Accounts Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the Wi-Fi Guest Account and Authentication Method on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Object > User/Group > User > ad-users**, set the **Authentication Timeout Settings** to **Use Manual Settings** and enter the number of minutes this user has to renew the current session before the user is logged out.

CONFIGURATION > Object > User/Group > User > ad-users

Edit User ad-users

User Configuration

User Name : ad-users

User Type: ext-user

Description: External AD Users

Authentication Timeout Settings: Use Default Settings Use Manual Settings

Lease Time: 1440 minutes

Reauthentication Time: 1440 minutes

In the ZyWALL/USG, go to **CONFIGURATION > Object > Authentication Method > default > Edit Authentication Method default**, click **Add** to insert group ad in the table. Click **OK**.

CONFIGURATION > Object > User/Group > User > ad-users

Edit Authentication Method default

General Settings

Name: default

#	Method List
1	group ad

OK Cancel

In the ZyWALL/USG, go to **CONFIGURATION > Web Authentication > General Settings** and select **Enable Web Authentication**.

CONFIGURATION > Web Authentication > General Settings

Global Setting	
<input checked="" type="checkbox"/>	Enable Web Authentication

Set Up the Active Directory Server Account on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Object > AAA Server > Active Directory > Add Active Directory** to configure the AD sever. Enter the **Server Address** (192.168.1.33 in this example) and **Based DN** (dc=cso,dc=net in this example). Specify the **Bind DN** for logging into the AD server (cn=Administrator,cn=users,dc=cso,dc=net in this example). If required, enter the **Password** for the ZyWALL/USG to bind (or log in) to the AD server.

CONFIGURATION > Object > AAA Server > Active Directory > Add Active Directory

General Settings		
Name:	ad	
Description:	<input type="text"/>	(Optional)
Server Settings		
Server Address:	<input type="text" value="192.168.1.33"/>	(IP or FQDN)

distinguishedName: CN=wifi_guest,CN=Users,DC=cso,DC=net
```

Set Up the Security Policy on the ZyWALL/USG

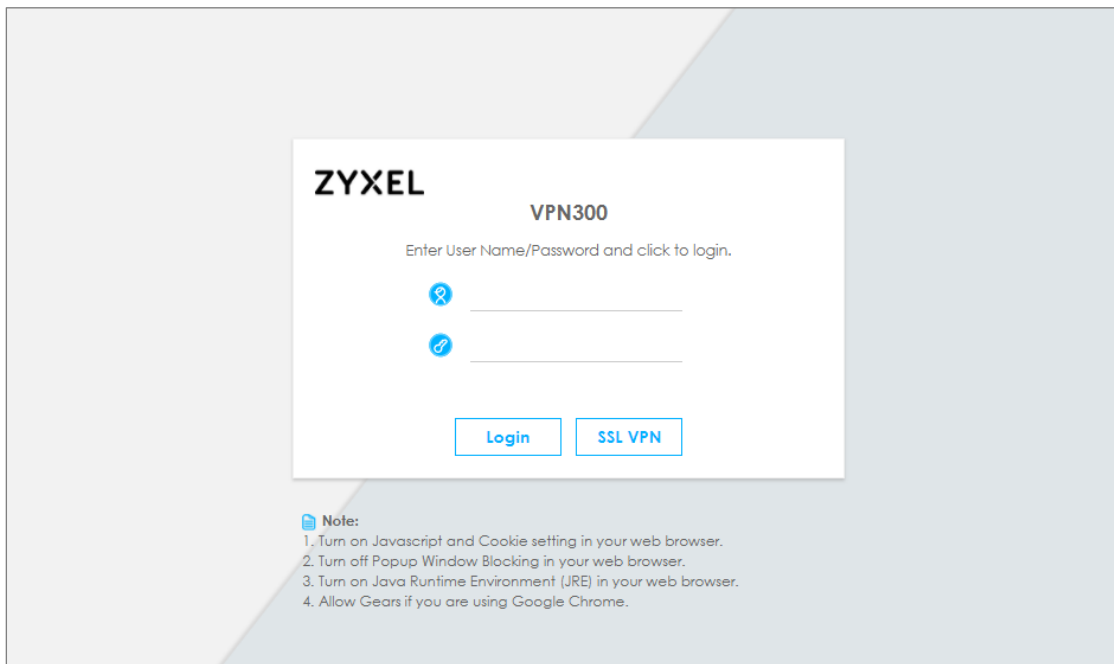

In the ZyWALL/USG, go to **CONFIGURATION > Security Policy > Policy > Add corresponding**. Configure a **Name** for you to identify the **Security Policy** profile. Set **From: LAN** and **To: any (Excluding ZyWALL)**. Set **Service** to be the service rule for Wi-Fi guest (wifi_guest_access in this example). Set **User** to be the Wi-Fi guest user (ad-users in this example). Select Log type to be **log alert** in order to view the result later.

CONFIGURATION > Security Policy > Policy > Add corresponding

<input checked="" type="checkbox"/> Enable		
Name:	WiFi_Guest	
Description:		(Optional)
From:	LAN	
To:	any (Excluding ZyV	
Source:	any	
Destination:	any	
Service:	Wifi_guest_access	
User:	ad-users	
Schedule:	none	
Action:	allow	
Log matched traffic:	log alert	

Test the Result

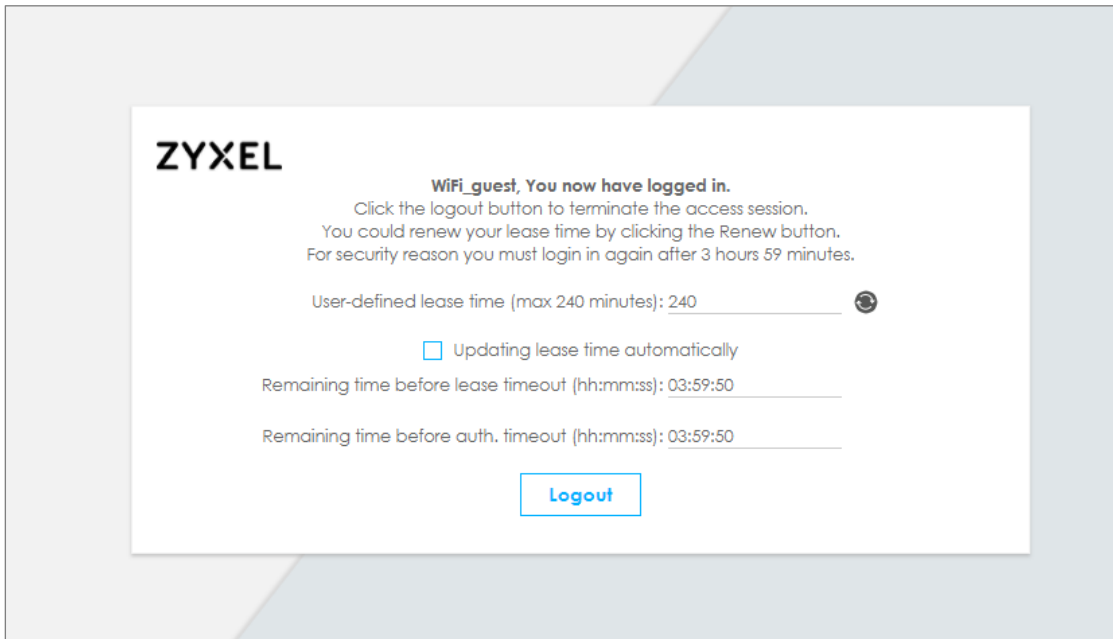

Using a mobile device to connect to the AP which is connected to the ZyWALL/USG. When you try to access the Internet, it will redirect to the user login screen.

Type the Wi-Fi guest **User Name** and **Password**, click **Login**.

The access session page will appear.

Go to the ZyWALL/USG **Monitor > System Status > Login Users**, you will see current login user list as below.

Monitor > System Status > Login Users

User ID	Reauth/Lease Time	Type	IP Address	MAC	User Info
WIFI_GUEST	03:59:42 / 03:59:42	http/https	192.168.2.34	90:3C:92:1C:C5:8B	ext-user(ad-users)

What Could Go Wrong?

If you see [notice] log shown as below, the Wi-Fi guest traffic is blocked by the **priority 1 Security Policy**. The ZyWALL/USG checks the security policy in order and applies the first security policy the traffic matches. If the Wi-Fi guest traffic matches a policy that comes earlier in the list, it may be unexpectedly blocked. Please change your policy setting or move the Wi-Fi guest policy to the higher priority.

Monitor > Log

Priority	Category	Message	Note
notice	Security Policy Control	priority:1, from LAN to ANY, TCP, service HTTPS, REJECT [count=3]	ACCESS BLOCK
notice	Security Policy Control	priority:1, from LAN to ANY, TCP, service HTTPS, REJECT [count=3]	ACCESS BLOCK

If you see [alert] log message shown as below, the Wi-Fi guest traffic failed. Please make sure you enable **Web Authentication** and check your AD server is working properly.

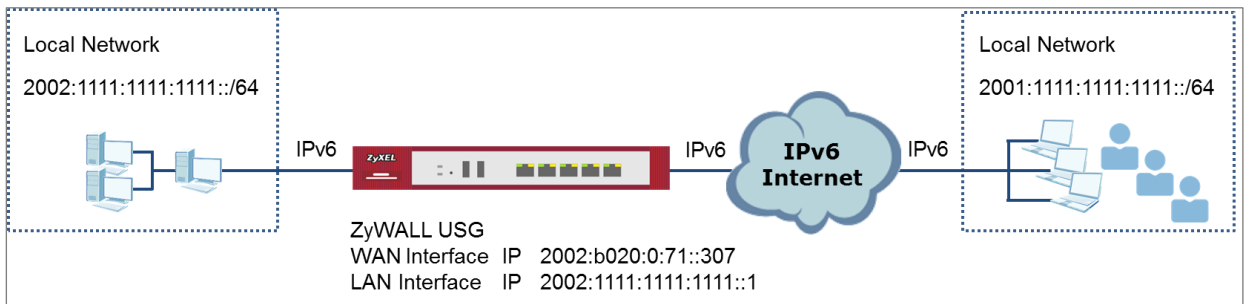

Monitor > Log

Priority	Category	Message	Note
alert	User	Failed login attempt to Device from http/https (incorrect passw...	Account: wifi_guest

 Note: The default setting of **Security Policy** is without log notification (except **PolicyDefault**), if you want to check which policy may potentially block the traffic, please select this policy and set the **Log matched traffic** to be **log** or **log alert**.

How to Set Up IPv6 Interfaces for Pure IPv6 Routing

This example shows how to configure your ZyWALL/USG WAN and LAN interfaces which connects two IPv6 networks. ZyWALL/USG periodically advertises a network prefix of 2002:1111:1111:1111::/64 to the LAN through router advertisements. ZyWALL/USG with Pure IPv6 Network Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Enable the IPv6 on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > System > IPv6 > Global Setting**, select the **Enable IPv6** and click **Apply** at the bottom of the screen.

CONFIGURATION > System > IPv6 > Global Setting

Global Setting
<input checked="" type="checkbox"/> Enable IPv6

Set Up the WAN IPv6 Interface on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Network > Interface > Ethernet > wan1**. Select **Enable Interface** and **Enable IPv6**. Select **Enable Stateless Address Auto-configuration (SLAAC)**. Click **OK**.

CONFIGURATION > Network > Interface > Ethernet > wan1

General Settings	
<input checked="" type="checkbox"/> Enable Interface	
General IPv6 Setting	
<input checked="" type="checkbox"/> Enable IPv6	?
Interface Properties	
Interface Type:	external ?
Interface Name:	ge1
Port:	P1
Zone:	WAN ?
MAC Address:	B8:EC:A3:A9:C0:0B

Test the Result

Connect a computer to the ZyWALL/USG's LAN1.

Enable IPv6 support on your computer. In Windows XP, you need to use the IPv6 install command in a Command Prompt. In Windows 7, IPv6 is supported by default. You can enable IPv6 in the **Control Panel > Network and Sharing Center > Local Area Connection** screen

Your computer should get an IPv6 IP address (starting with 2002:1111:1111:1111: for this example) from the ZyWALL/USG.

Window 7 > cmd > ipconfig

```
C:\Windows\system32>ipconfig

Windows IP Configuration

Ethernet adapter Local Area Connection:

    Connection-specific DNS Suffix  . : localdomain
    IPv6 Address. . . . . : 2002:1111:1111:1111:dc9:e2ff:7d32:19c9
    Temporary IPv6 Address. . . . . : 2002:1111:1111:1111:444d:9168:b972:2720
    Link-local IPv6 Address . . . . . : fe80::dc9:e2ff:7d32:19c9%12
    Default Gateway . . . . . : fe80::b2b2:dcff:fe70:c1d8%12
```

Open a web browser and type <http://test-ipv6.com/>. You can see the IPv6 connectivity result shown as below:

The screenshot shows a web browser window at test-ipv6.com. The page title is "Test your IPv6 connectivity." Below the title, there are navigation tabs: "Test IPv6", "FAQ", "Mirrors", and "stats". The main content area has sub-tabs: "Summary", "Tests Run", "Share Results / Contact", "Other IPv6 Sites", and "For the Help Desk". The "Summary" tab is active, displaying the following information:

- Your IPv6 address on the public Internet appears to be 2002:b020:0:71::307
- Your Internet Service Provider (ISP) appears to be HINET Data Communication Business Group, TW
- Since you have IPv6, we are including a tab that shows how well you can reach other IPv6 sites. [\[more info\]](#)
- Good news!** Your current configuration will continue to work as web sites enable IPv6.
- Your DNS server (possibly run by your ISP) appears to have IPv6 Internet access.

Below the list, there is a section titled "Your readiness score" with a score of **10/10**. The text below the score reads: "for your IPv6 stability and readiness, when publishers are forced to go IPv6 only". There is a link to "Click to see [test data](#)" and a note "(Updated server side IPv6 readiness stats)".

What Could Go Wrong?

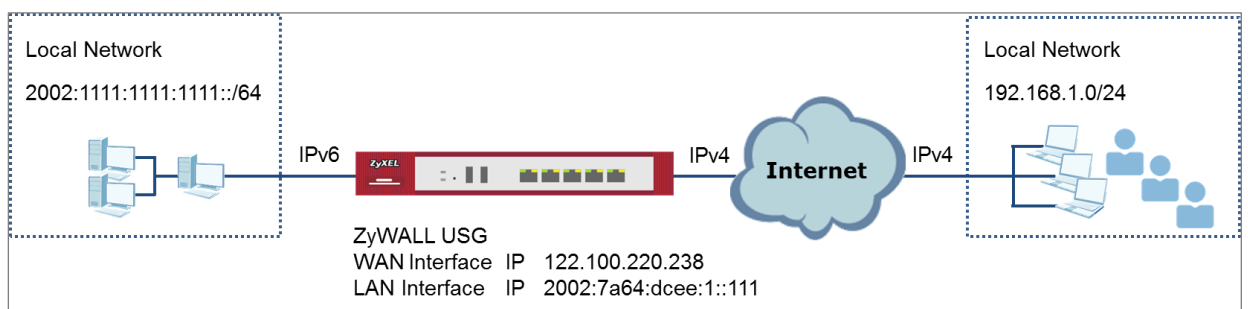

If your IPv6 connection is not working, please make sure you enable Auto-Configuration on the WAN1 IPv6 interface. If not, you will not have any default route to forward the LAN's IPv6 packets.

In Windows, some IPv6 related tunnels may be enabled by default such as Teredo and 6to4 tunnels. It may cause your computer to handle IPv6 packets in an unexpected way. It is recommended to disable those tunnels on your computer.

How to Set Up an IPv6 6to4 Tunnel

This example shows how to configure your ZyWALL/USG to create IPv6 6to4 Tunnel. In this example, the ZyWALL/USG acts as a 6to4 router which connects the IPv4. After configuration, the ZyWALL/USG can assign an IPv6 to clients behind it and pass IPv6 traffic through IPv4 environment to access remote IPv6 network.

ZyWALL/USG with IPv6 6to4 Tunnel Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the LAN IPv6 Interface on the ZyWALL/USG

The second and third sets of 16-bit IP address from the left must be converted from wan1 IP (122.100.220.238 in this example). It becomes 7a64:dcee in hexadecimal. (You can go to <https://isc.sans.edu/tools/ipv6.html#form> to convert an IPv4 address into its default 6-to-4 equivalent). You are free to use the fourth set of 16-bit IP address from the left in order to allocate different network addresses (prefixes) to IPv6 interfaces. In this example, the LAN1 network address is assigned to use 2002:7a64:dcee:1::/64 and the LAN1 IP address is set to 2002:7a64:dcee:1::111/128.

In the ZyWALL/USG, go to **CONFIGURATION > Network > Interface > Ethernet > lan1**, Select **Enable Interface** and **Enable IPv6**. Type 2002:7a64:dcee:1::111/128 in the **IPv6 Address/Prefix Length field** for the LAN1's IP address.

Enable **Router Advertisement**. Then click **Add** in the **Advertised Prefix Table** to add **2002:7a64:dcee:1::/64**. The LAN1 hosts will get the network prefix through the router advertisement messages sent by the LAN1 IPv6 interface periodically. Click **OK**.

        Minimum = 69ms, Maximum = 69ms, Average = 69ms
```

What Could Go Wrong?

If your IPv6 connection is not working, please make sure you disable Auto-Configuration on the LAN1 IPv6 interface. Enabling it will cause two default routes, however, the ZyWALL/USG only needs a default route generated by your relay router setting. Also, make sure you enable the WAN1 IPv4 interface. In 6to4, the ZyWALL/USG uses the WAN1 IPv4 interface to forward your 6to4 packets over the IPv4 network.

In Windows, some IPv6 related tunnels may be enabled by default such as Teredo and 6to4 tunnels. It may cause your computer to handle IPv6 packets in an

unexpected way. It is recommended to disable those tunnels on your computer.

How to Set Up an IPv6-in-IPv4 Tunnel

This example shows how to configure your ZyWALL/USG to create IPv6-in-IPv4 Tunnel. In this example, the ZyWALL/USG acts as IPv6-in-IPv4 routers which connect the IPv4 Internet and an individual IPv6 network. This configuration example only shows the settings on ZyWALL/USG_Z. You can use similar settings to configure ZyWALL/USG_Y.

ZyWALL/USG with IPv6-in-IPv4 Tunnel Example

 Note: All network IP addresses and subnet masks are used as examples in this article. Please replace them with your actual network IP addresses and subnet masks. This example was tested using USG310 (Firmware Version: ZLD 4.25).

Set Up the LAN IPv6 Interface on the ZyWALL/USG

In the ZyWALL/USG, go to **CONFIGURATION > Network > Interface > Ethernet > lan1**. Select **Enable Interface** and **Enable IPv6**. Type **2002:7a64:dcee:1::111/128** in the **IPv6 Address/Prefix Length** field for the LAN1's IP address.

Enable **Router Advertisement**. Then click **Add** in the **Advertised Prefix Table** to add **2002:7a64:dcee:1::/64**. The LAN1 hosts will get the network prefix through the router advertisement messages sent by the LAN1 IPv6 interface periodically. Click **OK**.

    Approximate round trip times in milli-seconds:
        Minimum = 21ms, Maximum = 21ms, Average = 21ms
```

What Could Go Wrong?

If your IPv6 connection is not working, please make sure you enable the WAN1 IPv4 interface. In IPv6-in-IPv4, the ZyWALL/USG uses the WAN1 IPv4 interface to forward your 6to4 packets to the IPv4 network.

In Windows, some IPv6 related tunnels may be enabled by default such as Teredo

and 6to4 tunnels. It may cause your computer to handle IPv6 packets in an unexpected way. It is recommended to disable those tunnels on your computer.

How to Update Firmware Automatically from a USB Storage

This example illustrates how to update the ZyWALL/USG's firmware automatically from a USB storage. With this feature, it is more efficient for users to upgrade the firmware for numerous devices without Internet or GUI access. The user can also downgrade the firmware by using this feature.

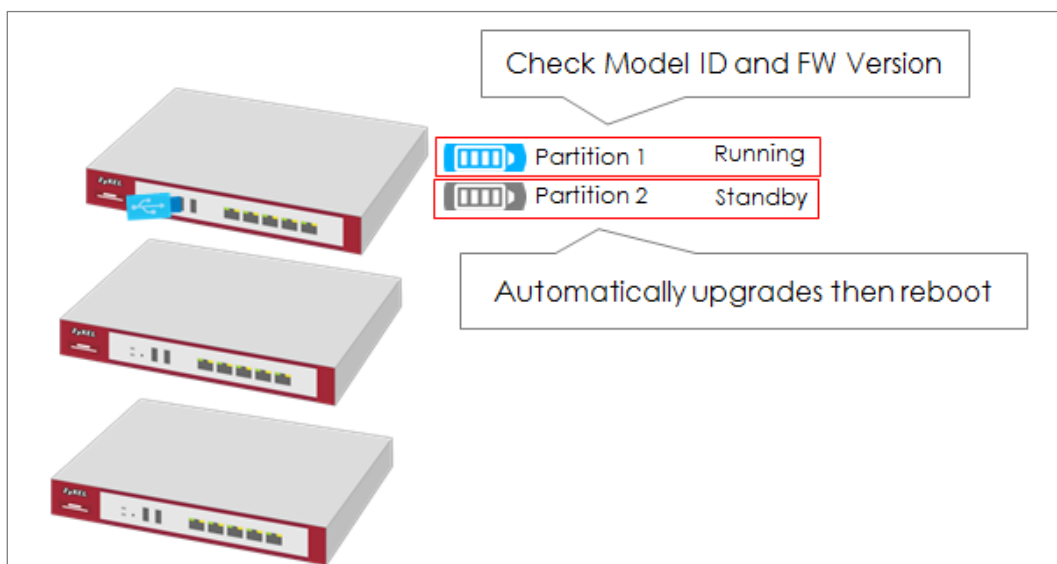

Figure 1 Automatic USB Firmware Upgrade

 **Note:** This feature does not support Device HA Pro firmware auto upgrade to passive devices. Do not use USB firmware upgrade on the devices with Device HA Pro function activated. This example was tested using the USG210 (Firmware Version: ZLD 4.25).

Automatic USB Firmware Upgrade Flow

- 1 Enable the USB firmware upgrade function by CLI command.
- 2 Save the firmware on the USB.
- 3 Plug the USB into the device.
- 4 The device checks running partition for the model ID and the firmware version.
- 5 Upgrade the firmware to the standby partition and then the device reboots.

Enable the USB Firmware Upgrade Function by CLI Command

For security concerns, the function is disabled by default. The administrator needs to enable the function by the following CLI command:

```
Router(config)# usb-storage update-firmware enable
```

Save the Firmware on the USB

There are two ways to create the firmware folder on the USB storage.

- 1 Follow the folder structure to create the firmware folder manually. It does not matter if the letters of the folder name are capitalized or not. For example:

D:\vpn300_dir\firmware

Create the Firmware Folder Manually: Root Directory \vpn300_dir\firmware

- 2 Plug the USB storage to the device and the device will automatically create the folder **Vpn300_dir**, which includes the following sub-folders. Save the .bin file to the **firmware** folder.

- centralized_log
- core_dump
- diagnostic_info
- firmware
- packet_trace

Firmware Folder is Created Automatically

Plug the USB into the Device

Once the .bin file in the firmware folder is detected, the device will copy it to the RAM.

Plug the USB storage into the USB port

The following message shows on the console if the device fails to copy the .bin file.

Router> USB update-firmware failed: firmware copy fail

The Device Checks Running Partition for the Model ID and the Firmware Version

The device checks the USB firmware with the running partition only. It does not check the standby partition.

1 Check model ID:

If incompatible, the device deletes the firmware in the RAM.

If compatible, the device checks the firmware version.

2 Check firmware version:

If it is the same as the running firmware, the device deletes the firmware in the RAM.

If it is not the same as the running version, the device starts to upgrade to the standby partition.

Check Model ID and Firmware Version

```
Router(config)# firmware verifying..  
Product model id is compatible!!  
This product's model id is E134  
The kernel image supports the following product model id:  
E134  
firmware updating..  
Please Wait about 5 minutes!!
```

Check Firmware Status

The device upgrades the standby partition and then reboots. After been upgraded to the standby partition, the device automatically reboots to switch from running to

standby partition. The SYS LED starts to blink when the device begins to upgrade its firmware until the rebooting process is completed.

Check the Firmware Version on the Dashboard

Device Information		
System Name	Serial Number	MAC Address Range

MONITOR > Log > View log

254	201...	info	VPN300 is configured successfully with startup configuration file.
-----	--------	------	--

What Can Go Wrong?

- 1 The USB storage must use the FAT16, FAT32, EXT2, or EXT3 file system. Otherwise, it may not be detected by the ZyWALL/USG.
- 2 The device only checks the firmware under the specific folder. Therefore, make sure the firmware is saved in the correct folder under the root directory:
\ProductName_dir\firmware. For example: \vpn300_dir\firmware
- 3 If there are multiple firmware files in the firmware folder of one model, the device only checks the first one in order.

Multiple firmware files of one model in the same folder is not supported.

- 6 This feature does not support the Device HA Pro firmware auto upgrade to passive devices. Do not use USB firmware upgrade on devices with Device HA Pro function activated. When using USB firmware upgrade on a device HA or in a device HA Pro scenario, make sure you plug the USB storage to the passive device for firmware upgrade first. After the passive device has finished firmware upgrading through the USB, plug the USB storage to the active device for firmware upgrade.

How to Configure DHCP Option 60 – Vendor Class Identifier

The following figure depicts how the ZyWALL/USG uses DHCP option 60. By matching

the VCI strings, a DHCP client can choose one specific DHCP server on the WAN network. This function is useful when there are several DHCP servers providing different services in an environment. Clients that need Internet service can be directed to the DHCP server which provides Internet connection information with the same option 60 string. IPTV clients may relay to another DHCP server which obtains IPTV service information.

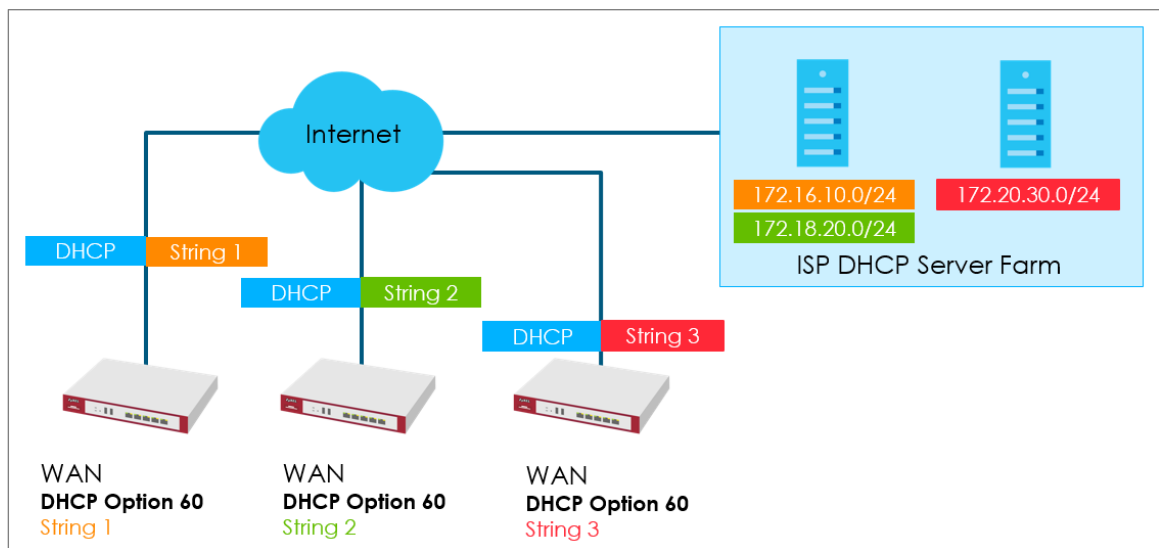

Figure 1 DHCP Option 60 Vendor Class Identifier

DHCP Option 60 Deployment Flow

- 1 Enable the WAN ports as DHCP clients (enabled by default).
- 2 Navigate to the WAN interface configuration screen.
- 3 Type in user defined option 60 string in the **Advance** setting section.

Setting Up DHCP Option 60 on the Web GUI

- 1 In the ZyWALL/USG's navigation panel, go to **Configuration > Network > Interface**.

How to Configure Device HA Pro

The Device HA feature acts as a failover when one of the devices in the network is dead or can't access the Internet. Therefore, this is a popular feature for network environments. In the previous firmware version, the USG supports AP (Activate-Passive/Master-Backup) mode. In V4.25, the Device HA feature is enhanced and named **Device HA Pro**.

In Device HA Pro, a “heartbeat link” is added for monitoring the interface status and synchronizing settings. Follow the steps below to deploy the Device HA Pro feature in your network environment.

Device HA Pro License

The Device HA Pro feature is license required. You must register both of your devices on the **myZyXEL.com** server first. Then make sure the Device HA Pro license is available on both of your devices.

Registration

[Service License Refresh](#)

Note: Update device license information from myZyXEL.com server. If you want to activate license, please go to portal.myzyxel.com

Behavior of the Device HA Pro

The behavior of the Device HA Pro includes a heartbeat link to monitor the “activate” device's interface status. If one of the monitored interfaces is dead or fails, the “passive” device's status will become “activate”. (This means only 1 device's status can be “activate” at a time.)

Be aware that the Device HA status of the devices might constantly change due to the network environment situation. In the current firmware design, Device HA Pro will not fallback when the primary device interface is working normally again.

Device-HA Pro Setting Screen

A. Enable configuration provisioning on the activated device

This function is for the secondary device. If you are configuring the primary device, this function is unnecessary.

B. Serial number of the licensed device for license synchronization

Entering the serial number of license from the **myZyXEL.com** server.

C. Configure the Device HA Pro interface

Enter the management IP address of the active and passive devices. Also, enter the password for synchronizing configuration with each other.

D. Monitoring Interfaces

Select the interfaces which you would like to monitor.

E. Synchronization

Enable failover when one of the interfaces fails.

The Main Function of the Device HA Pro

Device HA Status | **Device HA Pro** | **View Log**

General Settings | [Configuration Walkthrough](#) | [Troubleshooting](#)

Enable Device HA

Heartbeat Link

The heartbeat port is a new physical port on the device.

After you have enabled Device HA Pro, the devices will transmit multicast packets (UDP 694) to check each device's status.

When the passive device is working properly, the system LED light will be on. Only the heartbeat port's LED light can be on.

Suggestions

1. Transfer all the licenses to the primary device. This helps to avoid the system from recounting licenses every time.
2. Enable the connectivity check function on the monitored interfaces. When an interface doesn't receive any response from the remote server for a certain period of time, the device will consider the interface status as fail. Then the Device HA Pro feature will change the status of the interface.

How do I Configure Device HA Pro in My Current Environment?

License

The Device HA Pro feature is license required. Please go to register both of your devices on **myZyXEL.com** and make sure the devices have the license after syncing with the **myZyXEL.com** server.

1. Connecting the Device HA Pro Port

The Device HA Pro port is a new physical port on the DUT. You can use a cable to connect the devices with each other.

What can go wrong?

1. Why I can't see correct license status from myzyxel.com server?

On the Device-HA Pro setting, there is a function "Serial number of the licensed device for license synchronization". You should enter device's S/N which with licenses. So you can transfer all of the licenses to "Activate" device, and enter this device's S/N in frame.

2. Why nothing happened after enabled Device-HA Pro?

After you enabled Device-HA Pro, the secondary device will not forward any traffic any more except the latest physical port. So you must confirm the physical port already connected with each other.

3. Why after Device-HA failover to secondary device, it will not fallback to primary device?

Because Device-HA Pro purpose is for networking environment stability, so after mechanism failover to secondary device it will keep the latest status even primary device is back. It can avoid the network service unstable.

How do I configure BGP in MPLS network

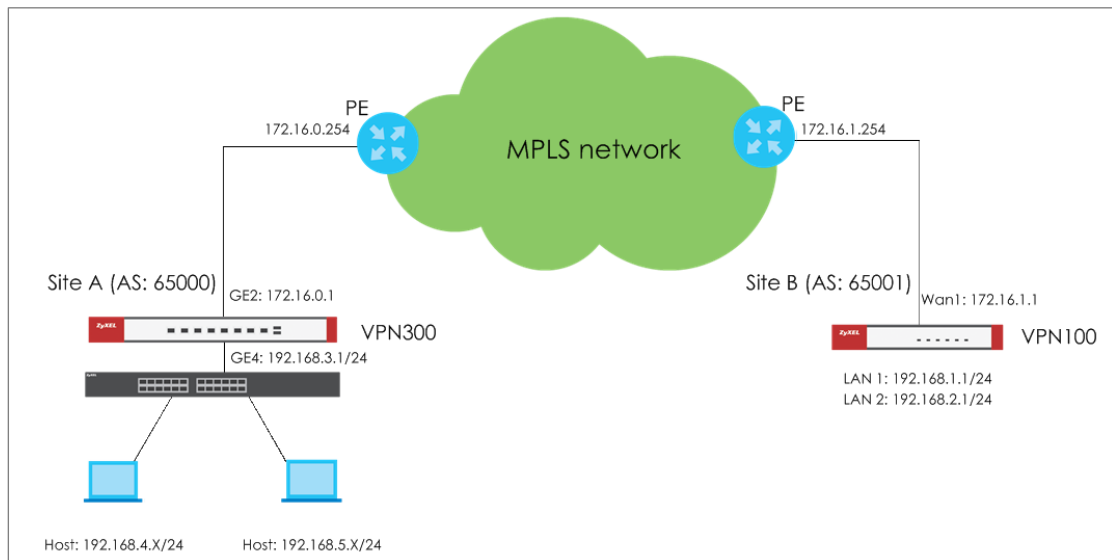

The following figure depicts a sample configuration of BGP through MPLS network. PE is the Provider Edge routers.

Site A VPN300 is using BGP to connect to the MPLS network.

Site B VPN100 is using BGP to connect to the MPLS network.

Both Site A and Site B are using the IP address space 192.168.1.0/24, 192.168.2.0/24, 192.168.3.0/24, 192.168.4.0/24, 192.168.5.0/24.

After completed this scenario, they can exchange routes to each other.

Network conditions

Site A:

VPN300

GE2: 172.16.0.1

GE4: 192.168.3.1/24

Layer 3 routing subnet: 192.168.4.0/24, 192.168.5.0/24

AS number: 65000

Site B:

VPN100

Wan1: 172.16.1.1

Lan1: 192.168.1.1/24

Lan2: 192.168.2.1/24

AS number: 65001

Prerequisite

1. Site A layer 3 switch routing subnet and default route configuration is correct.
These subnets can access internet without any issue.
2. Disable Default SNAT on Configuration > Network > Interface > Trunk on both site.

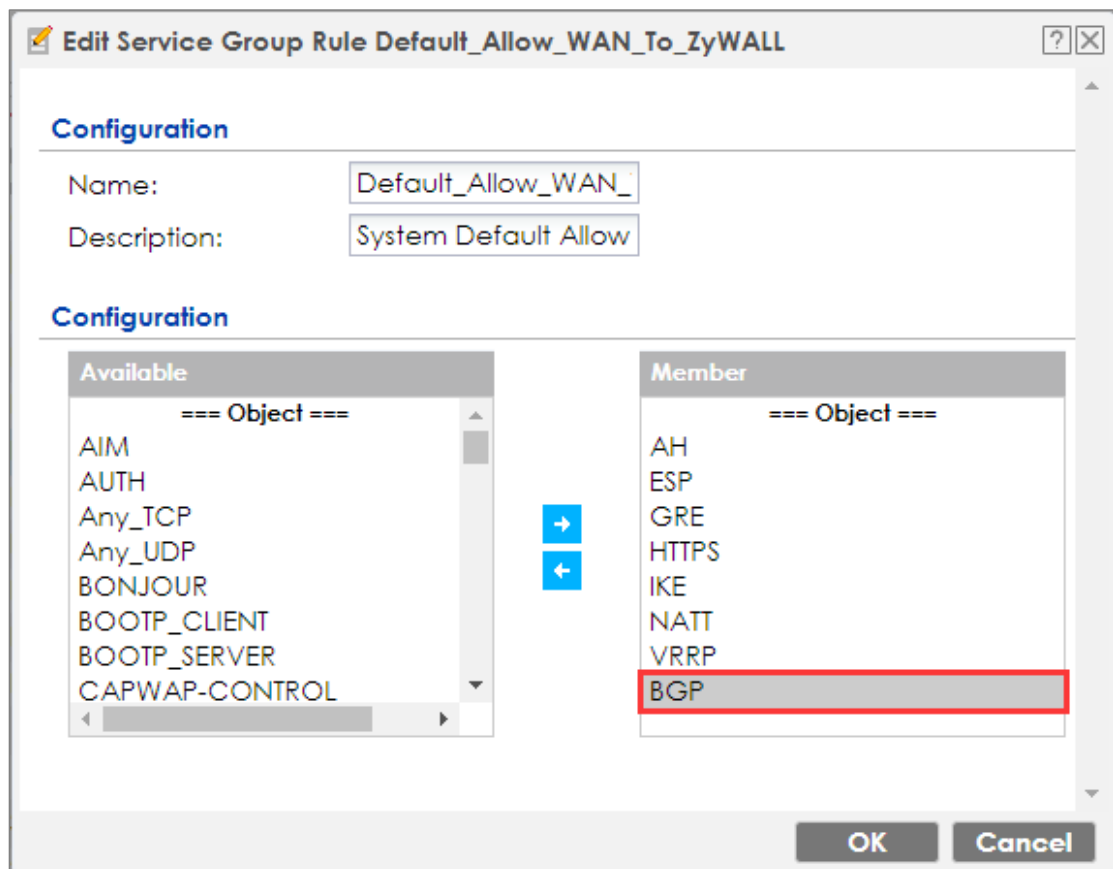

Configuration Flow

1. Add BGP service port in Default_Allow_WAN_To_ZyWALL service group.
2. Define local AS number and Router ID.
3. Set up Neighbors device information.
4. Add local subnet.

Configurations

On VPN300(Site A)

1. Add BGP service port in Default_Allow_WAN_To_ZyWALL service group.
- Go to **Configuration > Object > Service** screen's **Service Group** section. Edit Default_Allow_WAN_To_ZyWALL service group, add BGP to service group.

2. Define local AS number and Router ID.

Go to **Configuration > Network > Routing** screen's **BGP** General Settings. Fill in AS number 65000, and Router ID Router ID 172.16.0.1

The screenshot shows the ZyXel web interface for BGP configuration. The top navigation bar includes tabs for Policy Route, Static Route, RIP, OSPF, and BGP. The BGP tab is selected. Below the navigation bar, the 'General Settings' section is visible. It contains three fields: 'AS Number' with the value '65000', 'Router ID' with the value '172.16.0.1', and 'Redistribute' with a checked checkbox labeled 'Connected'. Red boxes highlight the input fields for AS Number and Router ID.

General Settings	
AS Number:	65000
Router ID:	172.16.0.1
Redistribute:	<input checked="" type="checkbox"/> Connected

3. Set up Neighbors device information. Click "add" button to add new Neighbors information. IP address and AS number are VPN100 Wan IP 172.16.1.1 and 65001. MD5 authentication key both site must be same, in this scenario it's 123456789.

Edit Neighbors 172.16.1.1

General Settings

IP Address: 172.16.1.1

AS Number: 65001

Enable EBGP Multihop

EBGP Maximum Hops: 255

Update Source: Interface ge2

MD5 authentication key:

Weight:

Keepalive Time: 60

Hold Time: 180

Maximum Prefix: 75

OK Cancel

4. Click "add" button to advertise these subnets to BGP neighbors. On VPN300, we have to add GE4 and GE5 subnet (192.168.1.0/24 and 192.168.2.0/24).

Network

+ Add Edit Remove

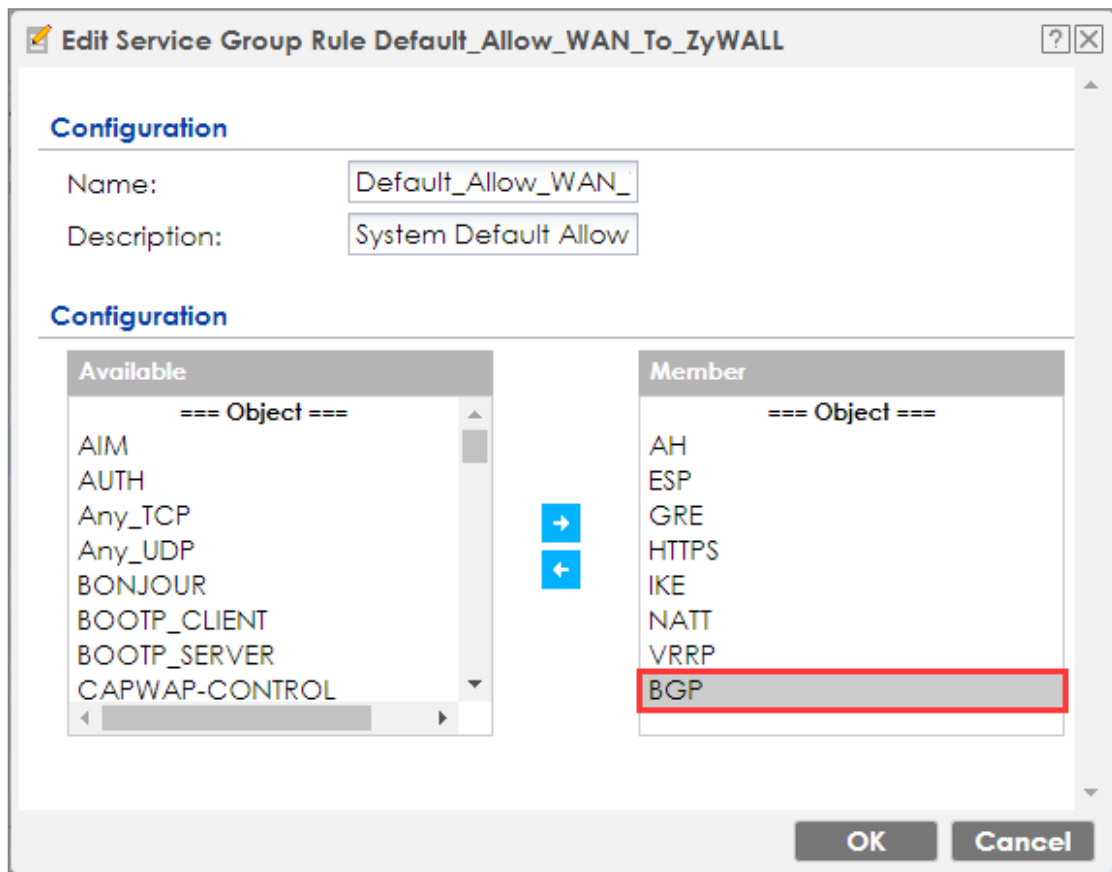

#	Network
1	192.168.3.0/24
2	192.168.4.0/24
3	192.168.5.0/24

Page 1 of 1 Show 50 Items Displaying 1 - 3 of 3

Note, in the scenario, suppose layer 3 switch complete the configuration, and USG had create static route for layer 3 routing subnet.

On VPN100(Site B)

1. Add BGP service port in Default_Allow_WAN_To_ZyWALL service group.
Go to **Configuration > Object > Service** screen's **Service Group** section. Edit Default_Allow_WAN_To_ZyWALL service group, add BGP to service group.

2. Define local AS number and Router ID.

Go to **Configuration > Network > Routing** screen's **BGP** General Settings. Fill in AS number 65001, and Router ID Router ID 172.16.1.1

3. Set up Neighbors device information. Click "add" button to add new Neighbors information. IP address and AS number are VPN300 Wan IP 172.16.0.1 and 65000. MD5 authentication key both site must be same, in this scenario it's 123456789.

Edit Neighbors 172.16.0.1

General Settings

IP Address: 172.16.0.1

AS Number: 65000

Enable EBGP Multihop

EBGP Maximum Hops: 255

Update Source: Interface wan1

MD5 authentication key:

Weight:

Keepalive Time: 60

Hold Time: 180

Maximum Prefix: 75

OK Cancel

4. Click "add" button to advertise these subnets to BGP neighbors. On VPN100, we have to add Lan 1 subnet and layer 3 routing subnet (192.168.3.0/24, 192.168.4.0/24, and 192.168.5.0/24)

Network

+ Add Edit Remove

#	Network

How to Configure Facebook Wi-Fi

The following figure depicts how a business partner links their local business Facebook page and the ZyWALL series device together to provide Wi-Fi access to users after interacting with their Facebook accounts. When a user first accesses the Internet, the ZyWALL series device will redirect the browser to the business partner’s Facebook page. Users are guaranteed Internet access after they checked-in the specific Facebook page.

Set Up the Facebook Wi-Fi on the ZyWALL series

1. First, enable web authentication through the ZyWALL series's web GUI. Go to **Configuration > Web Authentication > General** screen's **Global Setting** section. Select the **Enable Web Authentication** check box.

2. Enable Facebook Wi-Fi and pair up with your page. Go to **Configuration > Web Authentication > Facebook Wi-Fi** screen's **Global Setting** section. Select the **Enable Facebook Wi-Fi** check box and click **Configure**.

General	Authentication Type	Custom Web Portal File	Custom User Agreement File	Facebook Wi-Fi
<p>General Settings</p> <p><input checked="" type="checkbox"/> Enable Facebook Wi-Fi</p> <p>Configure This device is not paired with facebook. Please configure this device.</p> <p>Reset FB Page ⓘ</p> <p><input type="checkbox"/> Enable user idle detection</p> <p>User idle timeout: <input type="text" value="10"/> (1-60 minutes)</p> <p>Note:</p> <p>1. If you want to use Facebook Wi-Fi, Please go to Web Authentication policy summary.</p> <p>2. For more information on setting up Facebook Wi-Fi for your business. Please visit Facebook help center.</p>				

3. Click the **Configure** button to go to Facebook. Login your Facebook account on the browser before continuing with the steps below. You can click **Create Page** or select an existing page to pair up with the ZyWALL series.

Facebook Wi-Fi Configuration
S132L19210023

You must have a compatible local business Page to continue. A compatible Page needs to be claimed and associated with a valid location. For more information, visit the [Facebook Help Center](#).

Create Page

Or add a valid address to one of the pages below:

 Zyxel.cso

4. After the device is successfully paired up with Facebook, this **Configure** button functions as a shortcut to Facebook's Wi-Fi settings screen.
